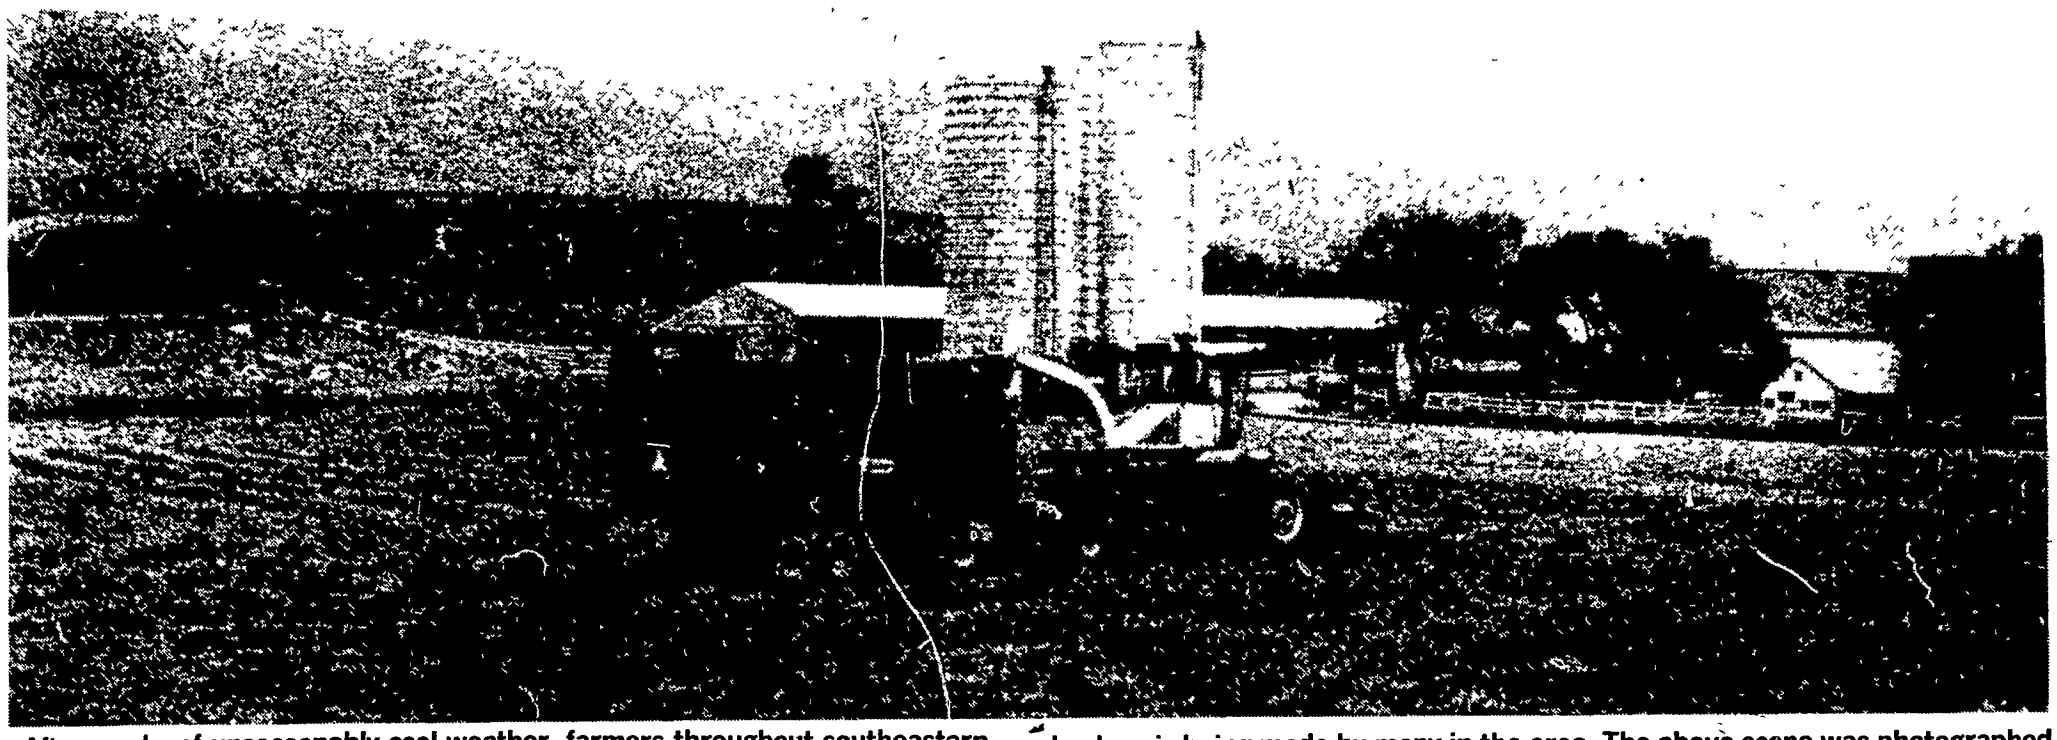
Lancaster Farming

Serving The Central and Southeastern Pennsylvania Areas - Also Maryland, New Jersey and Delaware

VOL. 23 No. 30 | Lancaster Farming, Saturday, May 27, 1978 | $6.00 Per Year



After weeks of unseasonably cool weather, farmers throughout southeastern Pennsylvania are busy with their field work. Most of the corn in the area has been planted, and now, with sunny skies and warm temperatures, hay and haylage is being made by many in the area. The above scene was photographed near Bernville in Berks County.

Corn up, hay looks good as conditions improve

By KENDACE BORRY

LITITZ – "Things are looking better every day," is the way one Lancaster County farmer summed it up and others across the Lancaster Farming area echoed his thoughts. The steady rain that has fallen in the last week or so and the warm, bright weather that has shone on the fields has brightened the hopes of farmers for a better season.

"I got my corn all in and it's up, about two to three and a half inches," the farmer went on. "The rain didn't hurt my corn and now I have pretty decent hay. I hope to start cutting it next week."

Another Lancaster County farmer estimated that about ¾ of all the corn is planted and about half of that is up, the average height being around the three inch mark.

"Some of the early corn planted may have rotted some," he commented. "But that rain sure helped the hay. It should start coming off next week."

"Growing, we're still about a week behind schedule," the farmer continued. "Everything looks better now than it did but we won't be able to tell what type of season it is for a month or so yet. But good, warm weather will sure help."

From Ephrata, a farmer told that he will start his hay cutting on Monday, weather permitting. And he com-

Feeder and slaughter cattle prices are still rising

By DIETER KRIEG

LANCASTER – Cattle prices continue to escalate to new heights with feeders and slaughter cattle leading the way. Whereas slaughter cattle eclipsed the $60 per hundredweight mark last week for the first time in nearly five years, prices at Lancaster County auctions and elsewhere are indicating that $60 for high choice and prime cattle is almost to be expected. At Vintage on Tuesday, for example, 70 per cent of the slaughter cattle offered went for us over $60 per hundredweight. The number of cattle offered was down by nearly 300 compared to a week earlier. The top price was $64.10 – fully $4 higher than the trend-setting price established at the Lancaster Livestock Yards on May 15.

Feeder cattle prices at Vintage on May 19 went as high as $70 per hundredweight for choice and good Angus, Charolais and Hereford cattle weighing 380 to 600 pounds. Some 700 to 900 pound animals were sold for $63 to $67.50 perhundredweight. Two Charolais cows with calves were auctioned off for $780 each and described as "outstanding."

In Lancaster on May 19,

Hay prices are mostly steady, but...

By KENDACE BORRY

NEW HOLLAND – An unheard of thing happened Monday at the New Holland Sales Stables hay sale. A small two-ton load of alfalfa-timothy hay was sold for the price of $230 per ton.

According to the sales stable, the hay was bought by a race horse owner, Ron Kohr, who is the owner of the Lauxmont Farms, Wrightsville. He reportedly bought the hay for his race horse Bedford Spirit, whose worth has been estimated at $365,000.

Norman Kolb, representing the New Holland Sales, related that this was the highest price he had ever heard paid for hay, and that it in no way represented the market.

"Hay prices are holding just about steady," he stated. "Average alfalfa hay is bringing about $125 to $150 per ton."

He went on to say that the sales stables is getting less loads of hay now than they did in the midst of Winter.

"Dairy farmers are starting to use pasture," he

Ben Morgan retires

UNIVERSITY PARK – Ben Morgan, professor of animal science Extension at Penn State University, will retire June 30 with almost 22 years of service to the University.

Prior to his appointment to the College of Agriculture faculty, Morgan served 21 years on the West Virginia Cooperative Extension Service staff as county agricultural agent and livestock specialist.

A native of Fairmont W Va., he received an A.B. degree from Fairmont State College and bachelor of

Agriculture bill draws fire

WASHINGTON, D.C. The Consumer and Agricultural Protection Act now pending before a Senate subcommittee would lead to a government-managed agricultural system and add a new layer of bureaucracy within the U.S. Department of Agriculture says the American Farm Bureau Federation.

The subcommittee on Agricultural Production, Marketing and Stabilization of Prices of the Senate Committee on Agriculture, Nutrition, and Forestry opened hearings on the proposed law Monday, May 22, and completed them Wednesday.

The bill (S. 2626) would set up a powerful National Board of Agricultural Governors, with members appointed by President Carter from agriculture, consumer groups, organized labor and business.

Ritchie heads Leb. Co. FFA unit

By JOANNE SPAHR

LEBANON – Heading the coming year's Lebanon County Chapter of the Future Farmers of America will be 17-year-old Northern Lebanon High School student Scott Ritchie. Ritchie, and eight other officers, make up the Lebanon County FFA unit.

Serving as vice president under Ritchie will be 16-year-old Robert Kreider, currently a sophomore at Annville-Cleona High School. Kreider will also be the '78-'79 president of the Little Dutchman FFA Chapter The son of Mr. and Mrs. Ben Kreider, Annville R1, Kreider has previously held the office of chaplain in his home chapter.

A second FFA member from the Little Dutchman Chapter is David Bomgardner, who will assume the duties of assistant vice president of the county chapter. The son of Mr and Mrs. Harvey T.

PACMA Eggs

PACMA-FACTS

The following market is supplied by PACMA-FACTS, a direct marketing organization affiliated with the Pennsylvania Farmers' Association. Participating poultrymen are members of PACMA, which employs a fowl marketing agent, The Farmers' Agricultural Cooperative Trading Society (FACT) - to sell members' fowl. PACMA works directly with the PFA poultrymen in the program.

Farm point prices prevailing for fowl to be marketed by members during the week of May 22 were 11½ plant, and 11½ farm.

Delmarva Poultry

May 24, 1978

Processor offerings are no more than adequate, asking prices are mostly 49 cents on US Grade A and 48 cents on plant grade. Ready to cook demand is good. Live supplies adequate in most instances. Current broiler/fryer negotiated prices for immediate includes mostly Multiple-drop shipments to New York City from Delmarva.

Range: US Grade A 48-50; Plant Grade 47-49; Premium X US Grade A 54.00; Premium X Plant Grade 52.00.

WTD AVG. US Grade A 48.68; Plant Grade 48.04; Premium X US Grade A 54.00; Premium X Plant Grade 52.00.

X-Includes special services, selected competitive brands, etc.

Eastern Pa. & N.J. Poultry

May 24, 1978

Offerings on light type increased slightly. Buying interest is fair. Occasional loads of 5-6 lbs. weights sold at 16 cents delivered plant basis.

Prices paid at farm: Light type hens 7-9¼ mostly 9-9¼; FOB plant 10½-11¼ mostly 11¼; Heavy type hens TFEWR.

Baltimore Eggs

May 24, 1978

EGGS: Demand very slow. Supplies fully ample on all sizes.

CARTONED EGGS: Prices to retailers, state graded (Min. one case sale) white.

At Pennfield, we formulate feeds and feeding programs with your profit in mind.

"All feed companies are alike."

If you believe that statement, you could be missing an opportunity to increase your output of eggs, pork or milk—without increasing your costs.

At Pennfield, our basic goal is to help our customers make more money. We believe we can accomplish this for you, too. For these reasons:

• Customized feeding programs. We specifically tailor a program to your operation, not to an "operation like yours."

• Nutritionally-superior feeds. We go a step beyond many conventional feeds. Our feeds have Optimum Nutrient Density (most profitable nutrient level per pound of feed) and contain high-quality protein for balanced amino acid nutrition.

• Quality in, quality out. We chemically analyze all incoming feed grains for pesticide residues and toxins... and all finished feeds for overall quality and nutrient content.

• Technical service. We're responsive to your needs—by phone or on your farm.

• A local company. We buy our feed grains locally; shipping savings are passed on to customers. Our feeding programs are developed based on local conditions. We do test work and field trials based on local conditions.

These and other Pennfield advantages are helping hundreds of new customers increase their profits. We can do the same for you. But you must take the first step by phoning or writing us. Do it today.

Pennfield Feeds, 711 Rohrerstown Rd., Lancaster, PA 17604. Local calls: Lancaster 299-2561, Red Lion 244-4511. In 717 and 215 areas dial toll free 800-732-0467.

Babcock's B-300V:

The layer that's never been beaten in Pennsylvania Random Sample Testing.

What characteristic do you look for in the layer you buy? High production numbers or efficient feed conversion? Large eggs or low mortality?

Why not pick the layer with the balanced performance that means profit for Pennsylvania egg producers — the Babcock B-300V.

In her very first year of testing, Babcock's B-300V swept the 20th Pennsylvania Random Sample Test, with the highest IOFCC for both divisions — cage **and** floor.

Test results listed below confirm field reports we've been receiving on the B-300V's outstanding performance — top egg production, great livability, competitive feed conversion, legendary resistance to stress, **plus** strong, beautiful shells.

STRAIN[3]	IOFCC[1]	HEN-HOUSED PRODUCTION[1]	% LARGE & X LARGE[1]	LBS. FEED/ LBS. EGGS[1]	% MORTALITY[1]	BODY WT. LBS.[1]	SHELL BREAKING STRENGTH LBS.[2]
BABCOCK B-300V	6.41	265.9	99.0	2.35	2.05	4.1	9.6
HISEX	6.24	263.6	96.9	2.49	5.60	4.1	8.5
DEKALB XL-LINK	5.91	264.5	95.5	2.51	2.55	4.2	8.7
SHAVER SX-288	5.90	259.3	100.0	2.44	4.10	4.7	8.9
HUBBARD	5.23	244.5	93.4	2.46	6.60	4.4	NA

[1] Combined results, cage and floor, 20th Pennsylvania Random Sample Test.

[2] Multiple Performance Testing . . . ask your Babcock representative for test results

[3] Hyline and H&N were not entered in Pennsylvania R.S.T.

If you're looking for profitability in the layer you buy, you're looking for the Businessman's Bird. Babcock's B-300V . . . first choice of poultry businessmen wherever eggs are produced at a profit.

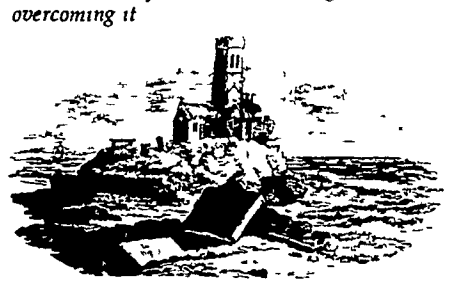
THE OLD FARMER'S ALMANAC

MAY 29-JUNE 4, 1978

Weather is great, celebrate!

Good time for outside painting Hillary reached the top of Mt Everest, May 29, 1953 Average length of days for the week, 15 hours, 5 minutes American Indians receive citizenship, June 3, 1924 . Henry Ford tried first car, June 4, 1896 Marines took Okinawa, May 30, 1945 . *The greater the obstacle, the more glory in overcoming it*



Ask the Old Farmer: What is the origin of the index finger movements, similar to stick-whittling, which accompany the admonition, "Shame, shame"? E\, Sandusky, Ohio

It's all that remains of the very ancient practice of washing the hands to remove feelings of guilt

Home Hints: Keep plastic wrap in the refrigerator and it won't stick

OLD FARMER'S WEATHER FORECASTS

New England: Clear and warm to start, then sunny south, rainy and cool north

Greater New York-New Jersey: Sunny and warm, then clear and hot at midweek, look for showers and seasonal temperatures over weekend

Middle Atlantic Coastal: Clear and very warm, rain at end of week

Piedmont & Southeast Coastal: Cool and rainy, clear at midweek, more showers over weekend

Florida: Cloudy and cool with some sun north at end of week

Upstate N.Y.-Toronto & Montreal: Clear and hot, then light rain, hot east at midweek, turning cloudy

Greater Ohio Valley: Week begins clear and seasonably hot, showers for week's end

Deep South: Showers to start, then clearing at midweek, partly cloudy and scattered showers for week's end

Chicago & Southern Great Lakes: Sunny and hot to midweek, then rain and cool in west

Northern Great Plains-Great Lakes: Partly sunny with showers central first of week, then sunny, seasonal with showers east

Central Great Plains: Cool with some heavy showers and rain all week

Texas-Oklahoma: Clearing, then intermittent rain and seasonal

Rocky Mountain: Week begins warm with few showers, end of week cloudy, cold with rain east

Southwest Desert: Clear, hot north, showers and cooler south, then end of week sunny north, partly cloudy south

Pacific Northwest: Partly cloudy and mild, midweek sunny and warm, weekend cool with light rain

California: Mostly cloudy and cool all week

Purina Bio-Mittent Lighting Program

Early poultry experimental results indicated that layers did not have to have a constant or continuous amount of light during the light hours. It was demonstrated that if the lights were programmed in certain specific patterns, nearly equal production rates to a constant lighting program could be achieved.

The challenge to Purina researchers was to develop an intermittent lighting program that not only would give equal production rates, but would also improve feed efficiency. After four years of testing and modification, the Purina Bio-Mittent lighting program is now ready for both pullets and layers.

Tests show that Bio-Mittent lighting provides equal production rates to that acheived with a normal constant day length. However, in addition it can provide certain economics in electrical savings and feed efficiency. These are improvements that cannot be achieved on a program of constant daylight but are possible to have when the Bio-Mittent lighting program is used.

EDITORIAL COMMENTS

Foreman's no nitrite proposal questioned

Editor's Note:
The following article appeared as an editorial in the May 15, 1978 edition of THE POULTRY TIMES. It is reprinted here with permission from THE POULTRY TIMES, published by Poultry and Egg News, Inc., Gainesville, Ga.

By JOHN F. YARBROUGH

There is never a dull moment for the poultry industry as it attempts to cope with the proliferation of proposals, plans and program changes emendating from the federal agencies in Washington that seek to run the businesses and lives of all Americans.

Most recently the Assistant Secretary of Agriculture for Food and Consumer Services, Carol Tucker Foreman, has issued a new proposal for the manufacture and labeling of bacon, ham, frankfurters, corned beef and similar products that are manufactured with little or no nitrites or nitrates.

This proposal raises several important questions. Does this mean that FSQS is preparing the way for some final ruling that would exclude the use of nitrites and nitrates, or is this really a sincere effort to assist processors of red meat and poultry who want to manufacture such products? Ms. Foreman says the proposal is based on response to consumer requests for nitrite-free products. No processors we've talked with are aware that there is any consumer demand for such products.

Another question of great significance, we think, in terms of maintaining a safe food supply, relates to the instructions required on the labels which FSQS would require on these low nitrite or no nitrite and nitrate meat products. For example, how many housewives know the temperature in their refrigerators? We asked a half dozen at random and none of them knew.

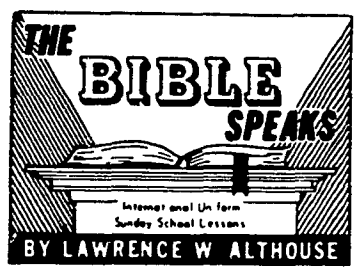
Is there any area in the average refrigerator, other than in the frozen food compartment, where nitrite free products of the types described above, can be properly stored at 40 degrees or under?

Sometimes that which is designed to remove confusion leads to confusion. The proposed regulations for low or no nitrite products will lead to confusion and possibly to tragic mistakes for consumers. We believe the average housewife who is used to picking up some sliced or whole ham, bacon, chicken franks or frankfurters, corned beef and similar products is not going to stop and read the label to see whether she has picked up bacon with low nitrite or regular bacon. With one kid in the shopping basket and another running up and down the aisles, or tugging at her skirt, and with the other pressures and demands that make her rush through her shopping, we believe she will often and perhaps more often than not, pay absolutely no attention to the proposed warnings - primarily because they will never register on her mind, IF she sees them. Furthermore, is she going to treat these products different when she is planning for or packing a picnic lunch or preparing for a church supper, etc.? We think not, and therein lies a new and increased hazzard, one much greater than any suspicioned hazzard from nitrite treated products.

We are not aware of any approved techniques that will make the type products Ms. Foreman proposes feasable to the food processor. We do not believe there is a demand for such products and we can't envision manufacturers tooling up to produce these products, with the costly R&D required, to say nothing of the marketing costs and sales and advertising expenditures that would be necessary to successfully launch another line of products.

Maybe we can give the lady Assistant Secretary a plus mark for what she must believe is a compromise. But we believe the inherent dangers associated with her proposal are too great to ignore.

We must return to the basic facts of meat preservation. The method of using nitrites as a preservative and flavor additive in many meat products is unquestionably the best and the safest way of protecting the public from botulism. Neither Ms. Foreman nor the producers of nitrite free products - products that require very special handling at the plant, in transportation, in storage at distribution centers, in display cases in the supermarket and in the hands of or the refrigerators of consumers, can afford to take the risks of food poisoning which would be so greatly increased by this proposal. On paper this proposal may sound like a "good" idea. But we don't know many producers or retailers who will want to bear the risks thus entailed.



PRESCRIPTION FOR INSOMNIA

Lesson for May 28, 1978

Background Scripture:
Acts 12.
Devotional Reading
2 Corinthians 4:7-18.

Let's get the picture of a very tense situation.

Herod the King had begun a violent persecution of Christians in his kingdom. James the brother of John was killed outright. Simon Peter, the chief Apostle, was arrested and thrown into prison under heavy guard and it seemed likely that Herod would have him killed also in order to please the Jewish trouble-makers who were daily increasing their complaints against the church.

Behold an angel

If you had been Simon Peter, how would you have felt? It seemed everything was crashing down about him and he could hardly have forgotten how he had denied his Master three times on a similar night of great crisis. So how do we find him? Luke tells us: "The very night when Herold was about to bring him out, **Peter was sleeping...**"!

A valued associate senselessly slain, the church under persecution, the faith endangered, himself likely to lose his life...and Peter was sleeping!

What was his secret prescription for finding sleep on a night when any other man would have become an insomniac? Perhaps part of the prescription is found in Luke's assurance that "earnest prayer for him was made to God by the church" (11.5). There was comfort in knowing that he was not facing this ordeal alone, but was sharing it with his friends and co-workers who helped to bear his burden with their earnest prayers. Simon Peter had already seen what prayer by these people could accomplish, although we suspect he was looking, not so much for release from jail, as help to come through this ordeal with his loyalty to Christ intact.

Now I am sure

There had been another night when Peter's loyalty had not fared so well. That night, knowing his Master was imprisoned and likely to be executed, Peter had felt frightened and alone. Yet, after Christ had been resurrected, Peter realized that he had not been alone that night and he need not have feared. For when God's enemies had done their worst, Christ was raised up and vindicated.

So, as Peter sat in Herod's dungeon, he knew that he was not alone, that even if he was killed, the power of the resurrected Christ would be more than enough to vindicate him and save him from extinction. Let Herod do his worst, it would not matter.

That Peter was not really anticipating escape is evident in his assumption that the appearance of the angel is really a dream. He knew that God would win in this situation, but he did not realize that God's victory would mean his escape from Herod's clutches. It didn't matter how God won his victory to Peter, for either way Peter knew that he was securely in God's keeping.

This, then, was the prescription of faith and loyalty that allowed Peter to sleep on a night that should have kept him awake.

NOW IS THE TIME

By Max Smith, Lancaster County Agricultural Agent
Phone 394-6851

TO MOW WEEDS

Don't be guilty of allowing the weeds in your pasture field, or your vacant lot, go to seed. Many permanent pastures contain various kinds of weeds that will produce seed and be a greater problem next Summer.

Also, many of the grasses are now shooting seedheads and should be clipped. This will encourage new growth and a better pasture. The clippings will dry and livestock will eat them readily. Owners of vacant lots and fields should be good citizens and prevent weed seeds from blowing over the community. If the area is mowed in the next week or so, and then mowed again in late July or early August, weeds will not have a chance to mature.

In addition, the greatest value will be better public relations with your neighbors.

TO TOPDRESS ALFALFA FIELDS

The first cutting of alfalfa will soon be ready to harvest in southeastern Pennsylvania. As soon as this crop is removed, it is suggested that the field be topdressed with a phosphorus-potash fertilizer. One such as a 0-20-20 or 0-15-30 will provide the phosphorus and potash needed. No nitrogen should be needed on established alfalfa stands.

Alfalfa is a very valuable forage crop, either for home feeding or for sale. Growers are urged to make every effort to get maximum yields. The county average of about 3.5 tons per acre of alfalfa hay is not good enough. Many of our crop authorities feel this yield can be greatly increased through better management.

TO PREPARE GRAIN BINS

In another month the winter barley crop should be about ready to harvest. The winter wheat will soon follow early in July. Growers who are going to store their new grain on the farm should be getting the grain bins ready.

It is best to clean out the old grain rather than put new grain on top. After the bin is well cleaned it should be treated with Malathion (premium grade) or with Methoxychlor to kill any grain insects. This is a good rainy day job prior to grain harvest.

Details of this stored grain and grain bin treatment can be found in the 1978 Agronomy Guide. Protect the new grain by storing it in an insect-free bin.

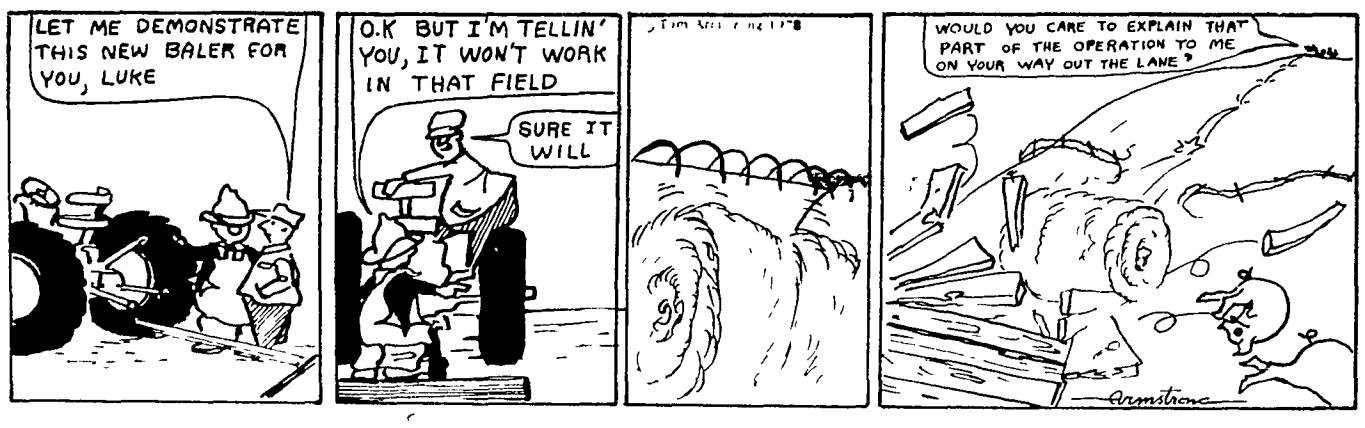
TO KEEP PESTICIDE RECORDS

Most farmers will be using one or more sprays or chemicals during the cropping season. This same thing might be true with dairy and livestock producers. If accurate records are kept of these treatments, it might save a lot of trouble and loss of income in case there is some question.

In many areas of food and fiber marketing Food and Drug representatives are checking for pesticide residues. They have been found in items where the producer followed regulations and every recommended practice.

In all cases it is strongly advised to make record of the date, the material, the rate, and all details. It might save your "neck".

Rural Route — By Tom Armstrong



LET ME DEMONSTRATE THIS NEW BALER FOR YOU, LUKE

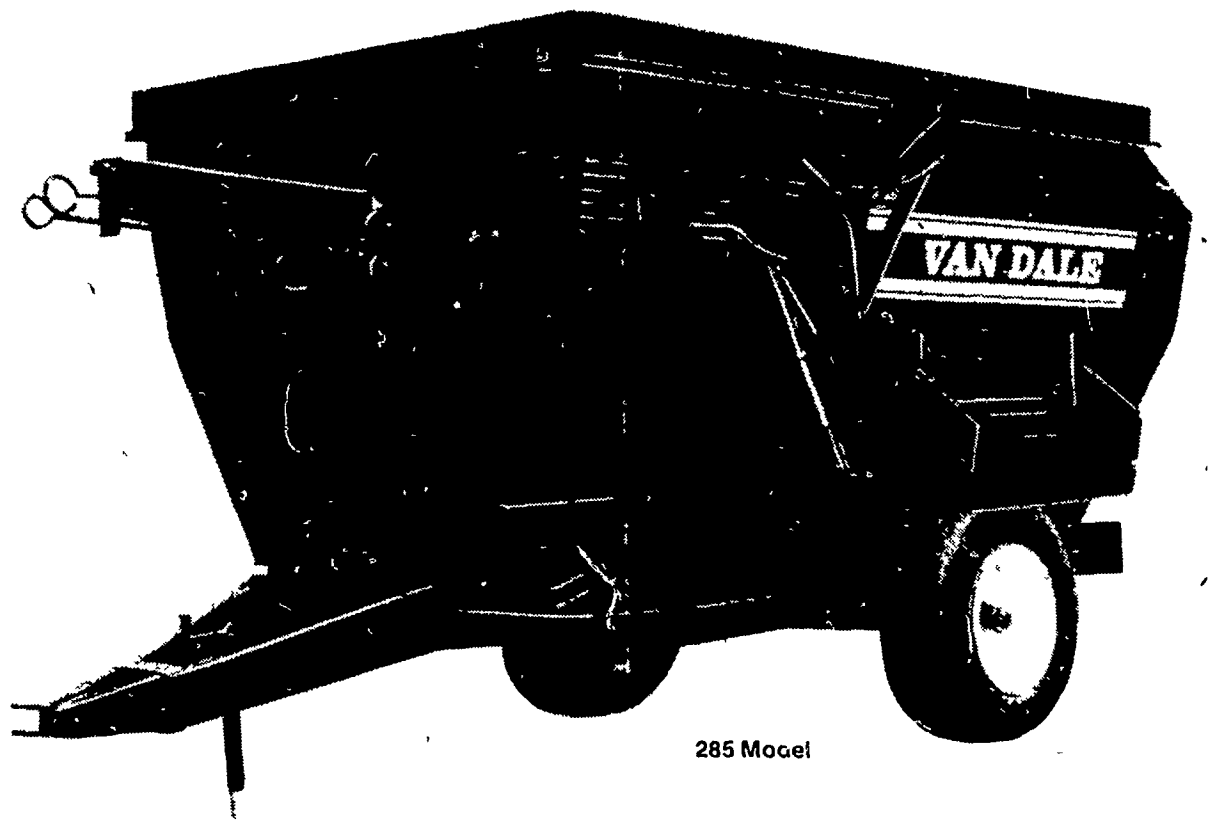
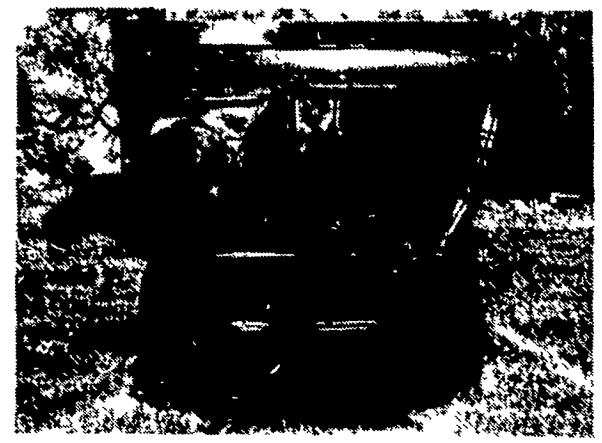
VAN DALE Total Mixed Ration (TMR) Fenceline Mixer Feeders

Hitch up to the versatile mixer feeder that handles partial as well as full loads Load up with haylage corn silage shelled corn urea and protein concentrates Then mix and blend on-the-go with PTO operated trailer or truck units You feed fenceline feedlot or pasture bunks with equal ease in one pass That kind of performance is no surprise once you've seen the kind of features we've built into these mixer feeders Check them all out Compare feature for feature with all other makes We know you'll choose Van Dale

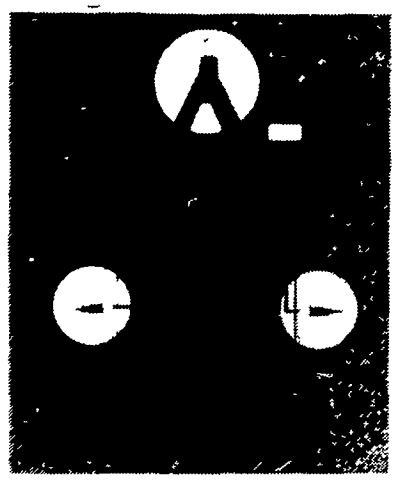
Optional Electronic Scale
Allows you to precisely mix each ration ingredient Every time Without waste or guesswork The digital indicator shows exact weights of all ingredients coming in and all feed going out Automatic signal tells you when weight reaches a pre-set amount (buzzer alarm or light optional)



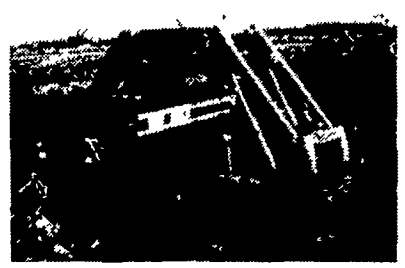
285 Model



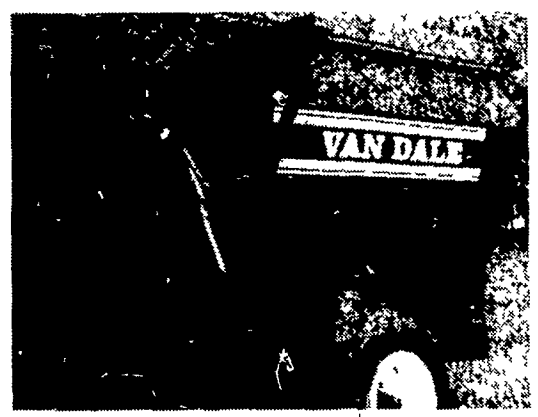
Fully Enclosed Oil Bath Drive
Inside this sealed chamber our rugged roller chain works in a continuous oil bath The result is more complete lubrication minimum maintenance and longer life We've even designed it so you can remove the augers without removing the bearings



Three Weigh Bars
Reliable and accurate to within one per cent Our three-bar system averages the weight on the hitch and each spindle to give you precision readings The system works off the tractor's 12-volt electrical system or a 12-volt battery Four weigh bar and load cell systems optional



Safe, Easy Loading
With low profile 85 to 105 height you load VAN DALE mixer feeders easily from mini loader tractor front loader or silo chute Exclusive safety grid of 1 steel pipes is standard Safety for the operator or observer Keeps out large bulky objects that could damage augers Lets feed flow in smoothly You work safer too



Center Discharge Hydraulic Conveyor
The VAN DALE center discharge design makes it easier to align the conveyor to the bunk and hold it in line The side door operates hydraulically So does the discharge conveyor You operate both from the tractor seat or truck cab Does not depend on PTO speed or ground speed to control flow of feed from conveyor This variable hydraulic feed control eliminates need to back up for another pass at the end of the bunk

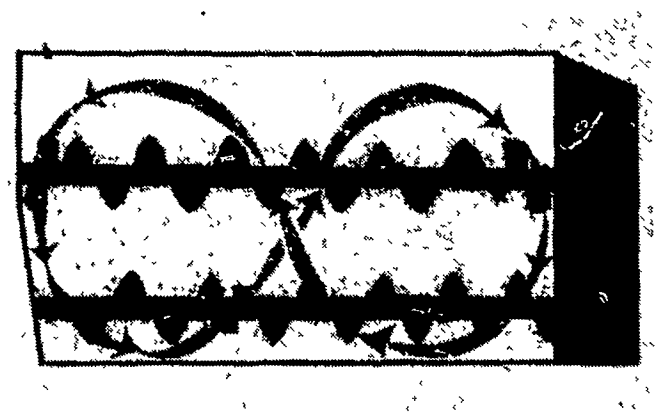


Figure-8 Mixing Action
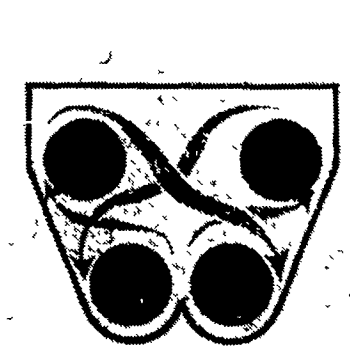
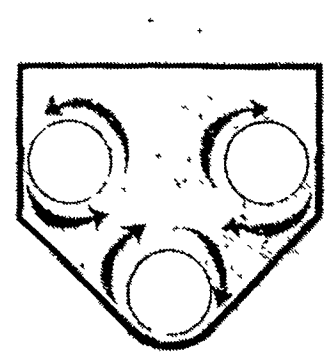
Our four-auger system moves feed ingredients in a double figure-8 (both horizontally and vertically) as it tumbles churns folds and blends for more complete mixing And since the mixing action always converges at the center of the box adjacent to the discharge chute feed moves only half the distance required by other units That means mixing time is also faster with Van Dale



The VAN DALE Four-Auger System
Our four augers mean a fast thorough mix of all ingredients How fast? How s 3 to 5 minutes sound? And that s with a half or full load And since we re moving feed half the distance and have four augers to do it Van Dale requires less horse power than most mixer feeders



Ordinary Three-Auger System
The competition Three augers forced to move ingredients the full length of the box for a complete mix Compare that to Van Dale And other makes can t promise a total mix with a partial load because the single bottom auger just rolls the feed instead of mixing

61.75; mixed good and choice 300-500 lb. 66.75-68.00; 500-700 lb. 56.50-60.00; 700-970 lb. 54.50-59.75; part load good 1075 lb. at 49.60; few good 600-900 lb. holstein steers 54.50-55.50.

FEEDER HEIFERS: Choice 300-500 lb. 58.00-60.50; 500-600 lb. 56.00-59.25, few part loads 504-581 lb. 59.90-61.00; 600-700 lb. 55.00-58.25; 700-800 lb. 55.25-57.50; mixed good and choice 500-600 lb. 53.30-55.50; 600-750 lb. 52.50-55.00; few good 500-750 lb. 50.25-52.00. Small lot 446 lb. 54.50.

FOR THE WEEK: Compared to late last week, feeder cattle and calves closed 1.00-2.00 higher; slaughter cows closed 1.00-2.50 lower, late sales utility and commercial 2-3 33.75-40.75, cutter 1-3 32.00-34.75; bulls closed near steady, week sales consisted yield grade 1-2 1000-1700 lb. 44.75-49.00; salable receipts near 29,500 head, compared to 29,852 head last week and 18,276 head the same week a year ago. Cows and bulls near 10 per cent of cattle receipts, feeders near 90 per cent of the total.

Omaha Cattle

May 25, 1978

CATTLE — Compared with previous week's close — through midweek prices on slaughter steers were 1.50-2.00 higher; heifers 1.00-1.75 higher. Limited late sales steers 2.50-2.75 higher and heifers 2.00-2.25 higher. Cows were 50-1.00 lower and bulls weak to 1.00 lower.

Four day receipts 19,300 as compared 16,500 last week and 17,900 a year ago. The fed cattle trade was characterized by an air of aggressiveness as most buying interests came into the week in need of cattle for immediate requirements. The upsurge in live prices continued with the advance supported by sharply higher quotations on carcass beef at the wholesale level. Best demand centered on choice and prime 1100-1300 lb. steers and 950-1100 lb. heifers, but feeder buyers were again competitive for two way cattle suitable for a short turn in the feedlot as futures board prices allowed hedging to advantage. The overall finish of the steer supply was rather attractive with a fairly liberal percentage choice and a modest volume choice and prime. Much of the dwindling heifer supply was good to average choice.

STEERS: Load choice and prime 3-4 1152 lbs. 62.00 late, load choice with few prime predominantly 3 1358 lbs. 61.50. At midweek, eight loads choice and prime 3-4 1132-1335 lbs. 60.50-61.00. Choice 2-4 975-1275 lbs. closed 59.75-61.50. Mixed good and choice 2-3 975-1250 lbs. closed 58.00-60.00. Good 2-3 52.00-57.50. Standard and good 2-3 49.00-51.50.

Average of LS-214, detailed quotations, for choice 900-1100 lb. steers this week 59.00; choice 1100-1300 lbs. 59.55. Average weight steers first three days 1142 lbs. as compared 1136 lbs. previous week. Average weight heifers first three days 977 lbs. as compared 973 lbs. previous week.

HEIFERS: Two loads choice and prime 3-4 1067 lbs. 58.85 at midweek, four loads and part loads same grade 3-4 961-1025 lbs. 58.25-58.50. Choice 2-4 875-1050 lbs. closed 56.50-58.50. Mixed good and choice 2-3 850-1000 lbs. 54.50-56.50. Good 2-3 48.50-54.50. Small lots standard and good 2-3 47.00-48.50.

COWS: Utility and commercial 2-4 38.50-41.00, few 41.50-42.00. Cutter 36.50-38.50. Canner and Low-cutter 33.50-36.50.

BULLS: 1-2 1300-1800 lbs. 44.00-48 50, individual 1 49.00-50.00.

FEEDERS: Moderate volume choice 950-1050 lb. steers 57.00-58.50.

Figure it for yourself.

You get top feed conversion & better daily gains with Bovotone 12-D.

Relying on homegrown grain and roughage this year? Make your cattle more feed-efficient by fortifying their rations with Bovotone 12-D.

Grain and grain silage, while high in energy, are low in minerals, vitamins, and other nutrients that promote top performance Bovotone 12-D corrects these deficiencies and encourages maximum feed intake when high levels of silage are fed.

Keep your out-of-pocket costs low throughout growing and finishing periods by using the most economical source of additional protein available.

Bovotone 12-D makes a difference you can take to the bank. Your figures will prove it

Use 10% less feed with Bovotone No. 76

If your feed supply is low, or you simply want better feed efficiency, fortify with Bovotone No. 76. This highly potent pre-mix contains Rumensin* plus all the vitamins and minerals needed to properly fortify feedlot rations. You can save over 10 percent on your feed supply, and that means more profit for you.

Now is the time to compare.

See your Vigortone dealer soon. He's ready to compare the performance of Vigortone's low-cost cattle feeding programs with any other you name.

* Rumensin is Elanco's trademark for monensin sodium

New methods devised to measure milk output

NEWARK, Del. – A dairy cow worth her salt pumps out 200 to 300 dollars of fluid annual net farm income. But any barn might be harboring an unrecognized underproducer who swallows up hundreds of dollars in feed and upkeep costs for little in return.

It used to be easy to tell weather a cow was worth her keep. The farmer simply milked her and hefted the bucket onto a spring scale. A few old-guard Delaware dairy farmers still operate this way.

But in modern dairy operations, buckets have given way to automatic milking machines which feed all the milk through pipes into a common collection tank. Thus, farmers need new ways to determine the individual cow's output. Agricultural engineers have given them at least three.

One of the officially approved milk-measuring devices that is popular in Delaware is the Milk-o-Meter. According to Delaware Extension dairy specialist Dr. George Haenlein, it resembles the water and gas meters found in homes. Plugged in between the cow and the collection tank, the Milk-o-Meter smooths the cow's squirts and spurts into a measured, steady stream. Each quarter-pound of milk registers on the meter. A sidetracking device can remove a representative sample of the milk for bacteriological and chemical analysis. Protein and fat content are determined this way.

Milk-o-Meters cost about $300, Haenlein estimates, but because they are portable they need not be owned by everyone who uses them. Twenty-five of the devices are owned by the three county chapters of the Dairy Herd Improvement Association in Delaware.

Farmers who participate in the DHIA testing program are visited monthly by an official testing supervisor who brings along several Milk-o-Meters. One dollar per month per cow lets the farmer know what each cow is producing.

Results are processed monthly at the Cornell University Computing Center and returned to each farmer. They are also sent, together with paternity information, to a central computer in Washington and published twice a year. Dairy cattle breeders from all over the world study the reports and request semen from the sires of the best milk producers. This is the secret of the great advances seen in dairy production in recent years, Haenlein says.

Naturally, these production records would be worthless of the milk-measuring devices were not accurate. For that reason, Haenlein recently brought Delaware's DHIA Milk-o-Meters to the approved calibrating center at Penn State where they were overhauled and certified accurate for the next year.

Haenlein like Milk-o-Meters because they are portable and accurate, but he emphasizes that other approved milk-measuring devices have equal merit.

One ingeniously simple device consists of nothing more than a calibrated plastic tube which measures proportionate samples of milk production. It has no moving parts to break down. Even so, severe temperature changes could warp the plastic.

Weigh jars also serve the purpose of measuring milk production and determining good and poor cows. All the milk from a given cow is collected in a huge glass jar, calibrated to measure more than 50 pounds of milk. It's simple, permanent, and not subject to warping. But it is not portable due to its size, so it can't be shared among farmers. Furthermore, repairs must be made by specialized glassblowers.

Whicjever device one chooses, a farmer shoudl follow through on a testing program, Haenlein insists. A farmer with 150 dairy cows may wince at the thought of a monthly testing bill of $150, but it is the only way to know which cows aren't paying for their board.

Crunchy Muffins

Add a crunchy outside to your muffins by sprinkling the greased muffin tins with finely chopped almonds.

Mushrooms Mean

Mushrooms are a source of protein, B vitamins and minerals and can be used as either a main dish or a garnish.

MEDICINE AND MANAGEMENT

By CARL TROOP, VMD

A word of caution about machinery repairs

This column is being written by request on a very good suggestion from a concerned farmer. It is directed not at farmers but toward those in agribusiness who serve and whose livelihood depends on the farmer. It is my hope that all those affected will take heed.

We have had numerous occasions in practice to treat cattle for hardware which be directly traced to carelessness of service personnel. These have varied from bolts not being tightened in new hammermills, feed mixers, and other feed handling devices, to carelessness in repair of silo unloaders, feeders, etc.

In more than one instance we have had a rash of hardware cases for a week or more after the unloader had been worked on. Not only have the animals exhibited signs of hardware but nuts, bolts, washers, wire, etc., have been found in feed bunks and feed troughs which could only have come from the unloader repair work.

When working on farm equipment which is around feed or handles feed the service person has a profound responsibility to do everything in his power to insure that no bolts or screws are left untightened and that all scrap or leftover metal is accounted for. It is their own best interest to do so as the farmers who have been in this unfortunate situation have not been very good advertisement for the firms involved.

Not only do these situations leave a bad feeling with the farmers but also leave the firms in the possible situation of being open to a lawsuit, and some of these cows aren't cheap.

Just a little common sense and the time to be careful is all that is necessary. When making repairs on unloaders for bunk feeders it is important to have a solid container present to put extra pieces and parts that will not be used. All nuts and bolts should be accounted for and carefully tightened. It is not too much trouble to carry a bucket or some other container along up into a silo to keep small pieces in. And this applies equally as well to farmers working on their own equipment.

It is the responsibility of the company owner or shop foreman to be sure that his service personnel are responsible and reliable, and to be sure to instill in them the importance of keeping metal out of the feed supply. Some may just not realize how important that task is or the possible damage it can do to an animal and the subsequent repercussions. Nothing should be taken for granted.

It is discouraging to farmer and veterinarian alike to be treating animals for something which could have easily been prevented. Besides a permanent stain on the image of the company, a great disservice is being done for the farmer. Most farmers are not the kind who would legally retaliate. But there are also many who would, and justifiably so. So please use a little discretion and common sense when setting up, repairing and replacing any feed handling equipment. A satisfied customer is not necessarily one for which a job is just well done, but just as importantly a job that is well cleaned up after.

Deadline near for dairy recipe contest

READING – The 1978 Dairy Products Cooking Contest will be held in conjunction with the Berks County Dairy Princess Contest and Dairy Week at the Berkshire Mall, June 12 to 17. The contest is sponsored by the Berks County Farmers Association.

Entries will be accepted in the following categories: Appetizers, soups, casseroles, beverages, cakes desserts, cheesecake, and pies. Anyone may enter one entry per category. All recipes must contain one or more dairy products. Dairy substitutes are not acceptable.

Entries will be judged on the use of dairy products, flavor, originality, ease of preparation, appearance, color, and texture. Winning recipes may be printed for distribution.

Recipes should be printed or typed on one or more 3 x 5 cards with one's name, address, and telephone number on the back of each card. Each recipe should contain the title, category to be entered with the recipe, exact measurements, mixing procedures, pan sizes, and approximate number of servings.

Entrties may be mailed to: Dairy Products Cooking Contest, Box 626A, RD 3, Hamburg, Pa. 19526. Deadline for entries is June 1. The best six recipes in each category will be chosen and entrants will be notified by June 6.

Those chosen will then be prepared by the contestants at their home and brought to the Berkshire Mall on June 12 for the final judging. Winners will be announced that evening.

First place winner in each category will receive a $10 gift certificate; grand prize winner will receive a $25 gift certificate.

Tip for mothers-to-be

NEW YORK, N.Y. – A protein and calorie deficiency during pregnancy is clearly deleterious to normal fetal growth, according to Dr. Myron Winick of the Institute of Human Nutrition at Columbia-Presbyterian Medical Center, New York City.

Reversing a trend among physicians to keep their pregnant patients as slim as possible, Dr. Winick believes that the average woman should gain between 20 and 25 pounds during pregnancy. A balanced diet is essential, of course, but it should include about 300 calories more than would be needed by a non-pregnant woman.

Grange meets

VIRGINVILLE – At a recent Virginville Grange meeting, the social committee reported that they will have refreshments at the hall on May 29 and will need baked goods. They also reported sales on June 10 and 17.

On June 7, the group will have their dairy supper, beginning at 7 p.m. All members are asked to bring a dessert using milk as an ingredient. Sewing contestants will model their entries.

As part of the Mother's Day program, Annetta Merkel was named Mother of the Year.

OSHA restraint order praised

PARK RIDGE, ILL. – A Supreme Court ruling prohibiting unannounced inspection of farms and other businesses by the Occupational Safety and Health Administration has been called "a citizens victory in the war against the invasion of privacy" by the nation's largest farm organization.

Allan Grant, president of the American Farm Bureau Federation, said here Tuesday that Farm Bureau has been most anxious to invoke the traditional constitutional protection against unreasonable searches. "The Court's ruling does just that. We are very gratified."

Since 1971, OSHA has carred out some 400,000 so-called spot checks of farms, factories, and other businesses. Farm Bureau joined with several organizations in support of a test case against the OSHA practice.

The Farm Bureau president said "It is vital that a man's place of business remain essentially free from government interference. This ruling should, once and for all, put an end to time and money consuming nuisance visits by legions of OSHA inspectors and may serve as a warning to other regulatory agencies."

The American Farm Bureau Federation participated in the appeal as a "Friend of the Court" in support of Barlow's Incorporated, a plumbing, heating, and electrical subcontracting business in Pocatello, Idaho. Barlow's Inc. and AFBF contended that Section 8 (a) of OSHA's regulations dealing with inspections violated the 4th Amendment of the Constitution which protects against arbitrary government intrusion.

W.R. Kriebel retires

UNIVERSITY PARK – Dr. Wesley R. Kriebel, professor of agricultural economis Extension at Penn State University, will retire June 30 with 26 years of service to the University.

Upon retirement, he will become director of the economics department of the American Truckers Association, Washington, D.C.

Prior to his appointment to the Cooperative Extension Service faculty at University Park, he served as an Extension agent in Tioga County and later as a regional marketing agent in five south central Pennsylvania counties. Since 1961, he has conducted research and educational programs in food distribution and transportation management.

Five years ago, Dr. Kriebel was selected the faculty director for a Distribution Management Institute for dairy and ice cream companies. The training program, sponsored annually by two national associations, has received increasing support by top management personnel across the country.

Through his leadership, a computerized routing and vehicle scheduling program (PENNROUTE) has brought national and international recognition to Penn State. He has carried out training programs to over 1000 persons on this project.

The PENNROUTE program has been used by food firms to help them reorganize delivery routes and to reduce the costs associated with local delivery.

Dairy club meets

Red Lion – The Milk and Money 4-H Dairy Club, Airville, York County, will hold a dairy month display on Saturday, June 3, from 10 a.m. to 2 p.m. at the square in Red Lion. York County's dairy princess will add a touch of royalty to the festivities.

Sea Facts

The largest sea in the world is the South China Sea which covers an area of 1 1 million square miles and has an average depth of 4,802 feet

WHAT'S NEW

MOISTURE METER

A new model Froment Moisture Meter - the No. 1210 allows farmers to monitor the moisture level of forages and silages and zero-in on the optimum level of moisture for ensiling and harvesting. It also permits farmers to determine the dry matter content of forages and low moisture grains, as fed.

The new Froment No. 1210 Meter, will measure up to 70 per cent moisture in forages and silages and as low as 12 per cent moisture in grain.

A new "electronic" grain tray that the user fills with the grain to be tested simply slides into the side of the No. 1210 meter, making measurement of moisture and dry-matter in all grains easy and fast. A special self-sealing plastic bag for measuring moisture in forages and silages simply slides into the aperture on the side of the meter for testing.

One of the features of new the No. 1210 Froment Meter is its large digital read-out which provides the moisture reading in three accurate, easy-to-read digits.

Another advantage of the new No. 1210 Meter is its solid state construction which enables the sensitive electronic circuits of the unit to withstand rugged day-to-day, on-location farm usage.

According to the manufacturer of the meter, the N.J. Froment and Co. Ltd., Stamford, England, tests by highly regarded independent organizations (names on request) - and in the field - prove the electronic No. 1210 Froment Meter with the mechanical packing plunger, the most reliable and accurate of its type for moisture monitoring on the market today. It is supposedly so accurate, it is recommended for use by commercial operators.

The Froment No. 1210 Moisture Meter is 11 inches long, 5¼ inches wide, 5½ inches high and weighs two pounds. It is housed in a high-impact, injection-molded plastic case and powered by a 9-volt battery. A carrying strap around the user's neck frees both hands for handling the instrument.

Complete details on the new model No. 1210 Froment Meter, including fully illustrated literature, are available by writing or phoning: N.J. Froment Sales, Inc., 616 Grand Blvd., Cedar Falls, Iowa 50613 (ATTN: Mr. G.E. Lewis) 319/256-1792.

Bearing pretty flowers now, and delicious fruit later, fruit trees are a precious gift in more ways than one.

Exams recommended for dairy cows

UNIVERSITY PARK – "All high producing cows should be examined by a veterinarian following calving to eliminate infection of the uterus whereby delaying the normal heat interval," said Dr. Ben Harrington, practicing veterinarian in Raleigh, N.C. He spoke at a dairy conference here at Penn State earlier this year.

There is a greater chance of post calving infection problems if the cow is housed in a stall rather than on pasture, he noted.

Producers with cystic ovaries do not show heat cycles. He recommends dairymen wait a month or two following calving before treating these cows because many times the problem will clear up.

Harrington said that every dairyman should have individual cow cards to track reproductive information. It also serves as a case history throughout the life of the cow. It also will help spot management and nutritional problems that are related to reproduction.

Corn up, hay looks good as conditions improve

(Continued from Page 1)

mented that his corn was planted on schedule and looked good. His biggest concern was his wheat.

"My wheat's just not so good," he related. "It's not as tall, and it won't give as much straw. Winter was awfully hard on it."

From Chester County, another farmer echoed the concern about the wheat.

"My wheat's shorter than usual because of the dry period earlier this year," he explained. "But I'm hoping to have nice grain. Often when the wheat is shorter, the grain is nicer."

Chester County farmers estimate around ⅔ of the corn is planted and some is as high as four inches already. With two to three nice days, the rest of the corn will be planted and the farmers will turn to cutting hay.

"It's perfect hay, beautiful alfalfa," one stated. "I haven't seen any cut yet, but it will start shortly."

There are a few reports in Chester County of field corn rotting.

"In a few spots, the corn was just planted too deep," the farmers agreed. "Water laid in the fields and the corn just rotted. Some varieties of corn were worse than others." They estimated about five per cent of the corn was hurt in this way.

There was also some report of erosion from the fields but this too seemed to be minimal in the farming reports. Especially among those who commented on the conservation practices they used such as contour strips and terraces, the gullies seemed to be few and minor.

A Lebanon County farmer stated that more or less all the corn was planted and he had seen quite a lot around three inches high.

"I've heard a few reports of some corn rotting, but I haven't seen any," was his reply. "And that rain did wonders for the hay. I've seen one person starting to cut his hay, and that was last week. So it got caught in the rain."

One York County farmer estimated that about 50 to 75 per cent of the corn is in that county.

"We had a nice day on Thursday," was his comment. "It's not bad in the fields now but it had been wet. I imagine the rest of the corn will be put in shortly." He added that the moisture content in the soil now was good, real good.

Another farmer from that county commented on the hay. "It looks pretty good over here," he said. "I've seen lots of good hay and a few farmers are starting to cut the alfalfa now."

Finally, from Berks County the comment was that around 75 per cent of the corn is planted with the rest going in the ground shortly. There were no reports of hay cut yet, but some farmers thought that it too would be done shortly.

A soon to be familiar sight is the baling of the hay as farmers intend to start cutting shortly, weather cooperating.

CHORE-TIME®

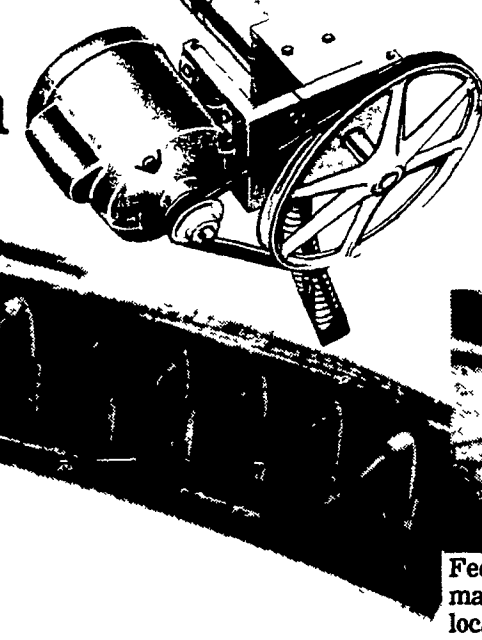
Feed Storage & Flex Auger Delivery System for Confinement Feeding

Completely Galvanized Weather Proof Bins

Poultry Systems . . .

Swine Systems . . .

Dairy Systems . . .



Original Flex-Auger® System

Capable of delivering up to 2400 pounds of feed per hour (with very low horsepower requirements), Chore-Time's original Flex-Auger® is still today's most efficient system for conveying feed. The one continuous piece, spring type auger, moves feed up, down, on-the-level or around corners ... without gears, connections or pins. Feed is delivered fresh, dry and clean in a rodent proof, completely closed delivery tube. Requiring no floor space, the ceiling suspended system is never in the way of machinery or animals. It is the one system that is all three ... adaptable, versatile and efficient.

Feed drops with or without manual shutoff feature can be located at desired intervals along the line. Single and Y outlet drop assemblies are available to deliver feed efficiently from main line to individual feeders through three inch plastic drop tubes.

"Hi-C" Flex-Auger® System

Containing all the features of "the original Flex-Auger® system," the "Hi-C" Flex-Auger® delivers increased quantities of feed equally well to broiler, layer, turkey, swine, or cattle operations. With a capacity of roughly three times that of the standard Flex-Auger® (this unique system is capable of moving three tons of feed per hour), feed is moved completely enclosed from bin to animals.

Arnold begins campaign for 48th district

LEBANON – Edward L. Arnold, the democratic candidate for the 48th senatorial district, formally began his campaign Monday through a series of news conferences in Lebanon, Lancaster, and Berks Counties.

The 35-year-old dairy farmer chose to announce his campaign from three farms located in his district.

In a prepared statement Arnold expressed concern for preserving the beauty and character of the area.

"All our farm land need not go under macadam for our countries to grow and develop," he said. "Although I would prefer to see individuals handle the problem of preserving land, the problem is larger than individuals. We need to take a good hard look at development rights and the role that government can play in them."

The young farmer also talked about the need to strengthen the small towns and communities of the region, calling them "the very soul of the district."

"Property tax reform will play an important part in improving our communities," Arnold said. "For too long the state has discussed and debated various property tax relief proposals without taking positive action. Property owners can no longer afford to be the primary local support of the school system."

He concluded by calling for a change in leadership in the 48th District.

Edward L. Arnold

"For too long the people of the District have conceded victory to my opponent because they thought they didn't have a choice. This year, I believe, it is time for a change in the 48th District."

Arnold, a 1966 graduate of Lebanon Valley College, and a farmer for the past 16 years, is a member of the Lebanon County Industrial Development Authority and the Executive Committee of the Lebanon County Democratic Committee.

The 48th Senatorial District includes portions of Lebanon, Lancaster and Berks County.

Md. market directories ready

COLLEGE PARK, Md. – Cool, wet weather has slowed up strawberry ripening this year in Maryland. Luckily, there have been no freezing temperatures in major growing areas to damage early blossoms.

So those luscious harbingers of the local fresh fruit season are now turning red in large quantities, even though quality of berries in the late ripening stage may have been deteriorated slightly by last week's rainy spell.

The famed strawberry auction market at Princess Anne (Somerset county) was scheduled to open May 23 on Maryland's lower Eastern Shore – nearly two weeks later than normal.

Roadside stands and pick-your-own operations on the western side of the Chesapeake Bay probably won't have strawberries available until Memorial Day or early June – also two weeks behind schedule.

Availability of Maryland strawberries is expected to be more uneven through June than in most years, too, because Midway, a popular midseason cultivar, appears to have suffered heavy winter-kill. However, both the early and late-season strawberries are looking good in most areas of the state.

Fresh asparagus and spinach are already available from some growers. And a number of locations should be offering green peas by mid-June.

Whether one wants to make up a family outing and pick his own, or simply stop by a roadside stand for fresh produce, he can find locations and telephone numbers in two free directories published by the University of Maryland's Cooperative Extension Service. These leaflets have been updated annually for six years.

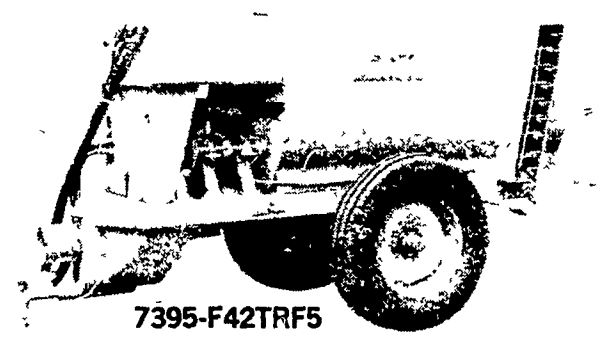
Available for the first time is a new statewide directory listing sources of supply and services in the realm of farm-cured meat and custom livestock slaughtering.

Single copies of all three leaflets may be picked up from most public libraries and from local county Extension offices. One should look for the following titles on distribution racks: **Roadside Markets in Maryland** (AREIS No. 15); **Pick Your Own Fruits & Vegetables in Maryland** (Extension leaflet 76); **Facts About Buying Meat** (CES "yellow sheet").

Because of the expected large volume of requests for all three leaflets, one should not expect to have copies mailed. They must be picked up in person.

Built to Handle the Big Crop

- Covers approximately 300 acres per day with 80 ft. total swath.
- Remote Controls include long hose harness for mounting next to operator.
- Control panel includes instant shut-off valves and vane controls to direct the spray swath.
- PTO Drive - Low Cost Operation.



7395-F42TRF5

- Low volume application from 20 to 50 GPA eliminates continuous fill ups.
- 60 to 70 HP tractors recommended.

Human brucellosis still a serious problem

WASHINGTON, D.C. – With calving and farrowing seasons now underway, farmers and ranchers should be aware that brucellosis still poses some risk to human health. Assisting animals at birth is one way people may become exposed to this disease.

Thanks to pasteurization of milk and progress in eradicating the disease in livestock, human brucellosis (sometimes called undulant fever) is no longer a scourge of rural areas.

"But it's still considered an occupational risk for certain people," said Dr. Paul Becton, director of the national brucellosis eradication program for the U.S. Department of Agriculture (USDA) Animal and Plant Health Inspection Service.

According to Dr. Becton, the disease now occurs most frequently in packing plant workers, livestock producers, and veterinarians – the people most likely to handle infected animals or their carcasses.

The early 1970's saw a rise in human cases, from 175 in 1973 to 354 in 1975 – a doubling in just two years. This increase was closely linked with a resurgence of the disease in cattle – a trend which has since been reversed.

"When plotted on a chart," said Dr. Becton, "the human infection rate closely follows the trend (generally downward) in cattle infection. (See charts.)

"Through the cooperative efforts of state-federal animal health workers and producers," said Dr. Becton, "the infection rate in cattle is now down to one-half of one per cent compared with a five per cent rate 20 years ago. Similarly, reported human cases are now below 300 a year – a fraction of the 6,400 cases reported in 1947."

The Department of Health, Education and Welfare (HEW), U.S. Public Health Service, has an active interest in human brucellosis. HEW's Center for Disease Control (CDC) in Atlanta carries brucellosis as a reportable disease in its weekly tabulations on morbidity and mortality. CDC also issues an annual summary of brucellosis surveillance.

Since 1960, CDC notes that most human brucellosis in this country has been of swine origin. In two recent years (1975 and 1976), however, cattle-related cases exceeded swine-related cases.

CDC figures show that brucellosis predominately affects men between the ages of 20 and 60. This is the age category of the working force in this country, the group most likely to acquire brucellosis in the meat packing and livestock industries.

According to CDC, the most probably source of exposure to workers in the meat processing industry is swine. But, for workers in the livestock industry – producers, veterinarians, market employees – the most probably source is cattle.

Dr. Becton noted there are no cases on record of people getting the disease by eating meat. This is because the bacteria that cause brucellosis tend to localize in the reproductive tract and udder, parts that are removed at slaughter. Also, the bacteria are readily killed by normal cooking temperatures or pasteurization.

Some natural food advocates favor the use of raw rather than pasteurized milk. This preference for unpasteurized milk may, according to Dr. Becton, present some risk to these individuals.

In a recent 10-year period (1965-1974), the eating or drinking of unpasteurized dairy products accounted for some 190 human cases. However, only one-third of these was attributed to dairy products produced in this country, and none to commercially distributed products.

"Though uncommon today, human brucellosis is a serious disease," said Dr. Becton, "one that can cause much misery."

The disease is characterized by insidious onset of fever, chills, sweats, weakness, pains, and aches. Weakness bordering on exhaustion is the most outstanding complaint in both acute and chronic cases.

Untreated, brucellosis in man can result in a debilitating, incapacitating illness of long duration with an occasional death.

Diagnosis presents one of the difficult aspects of human brucellosis. Since the symptoms may only last from a few days to a week with each episode, they are commonly passed off as some form of "the flu" or other common infection.

Also, the time between exposure and the appearance of symptoms varies from a few days to several months; so the source of infection also may go unrecognized.

Chronic forms of brucellosis, especially, present diagnostic difficulties because the symptoms are characteristic of many disorders –

Study of motor vehicle breakdowns brings word of caution from Turnpike Commission

HARRISBURG – A three-month study of automobile breakdowns along the Pennsylvania Turnpike reveals that motorists should check the gas gauges, tires, fan belts and radiator hoses before their trips if they want to avoid an emergency roadside call or towing charges.

Running out of gasoline, flat tires, frayed fan belts and worn radiator hoses top the list as the reasons for vehicular breakdown on the 470-mile Turnpike System.

Turnpike Commission Chairman Jack I. Greenblat called for the study to determine the nature of passenger car breakdowns and charges for these emergency road services by the System's authorized service garages.

The study is for the first three months of 1978 when 7730 vehicles were repaired along the toll road or towed to authorized Turnpike garages for repairs. During that same period, more than 14 million vehicles traveled the Turnpike.

"Many of these road emergency calls could have been avoided if drivers had taken the precaution to check their vehicles prior to the start of their trip. For example, more than 700 motorists ran out of gas on the Turnpike during January, February and March, and nearly 900 motorists had flat tires during the same period," Greenblat said.

There are 15 authorized service garages located off the Turnpike which report nearly 52,000 service calls a month. The average cost per job is approximately $19.35.

The most prevalent repairs were for fan belts, overheating, radiator service, battery, ignition system, flat tires and assorted mechanical failures.

Statistics compiled by the Pennsylvania Turnpike Commission show that nearly 12 per cent of all road service calls are for patrons who ran out of gasoline.

Emergency road service calls on the Pennsylvania Turnpike are $12.50. Towing services for passenger cars from the Turnpike to the authorized service garage or points between the garage and the Turnpike are $25.00. The rates went into effect in February, 1977, and were the first major increase in two decades for the authorized service garages.

Repairs made off the Turnpike are strictly between the authorized service garage and the motorist. The Pennsylvania Turnpike Commission receives no funds from the garages.

Pennsylvania's service rates are not the highest compared to other state toll roads. For example, the New York State Thruway Authority allows a $30.00 maximum for the towing of vehicles up to 15 miles from the point of disablement to the garage. The Massachusetts Turnpike allows a $17.50 minimum plus $1.00 for each additional mile of towing up to a maximum of $27.50 during certain times. The Garden State Parkway in New Jersey allows maximums of $25.00 and $30.00 for towing vehicles.

"A little preventative maintenance can save the motorist delays and unexpected emergency road expenses," Greenblat said.

Sun Facts

In order to list the weight of the sun in tons, one would have to add 21 zeroes to 2,184,759 If the sun disappeared it would take approximately eight minutes for us to realize it That's because the sun is 93 million miles away and we would still see sunlight after the spheroid vanished The sun's light takes eight minutes to reach the planet earth

Grain mill being readied for museum

YORK – The heart of the Rose Garden Mill is being moved from the banks of the Yellow Beeches Creek, in Pennsylvania's Cumberland County, to a permanent exhibit area in the Hall of Science and Technology at the William Penn Museum, Harrisburg.

The exhibit will open late in September, 1978, but a special preview will be conducted for members of PennAg Industries Association, who will be holding their 100th annual convention in Harrisburg at that time. PennAg is a statewide agribusiness trade group whose membership includes many people who grew up in milling families.

MarkeTechs, Inc., a York R5 exhibit firm, is putting the Rose Garden Mill display together for the museum. According to Otis Morse, MarkeTechs president, the mill was built between 1740 and 1790. Originally powered by an undershot water wheel, the mill switched to a reactor type turbine about 1913.

Original parts to be used in the display are the turbine, the stationary bedstone and the runner stone, which rotated to grind the grain. A number of tools, bags and scoops will also be included.

One interesting feature of the exhibit will be an original tall box. Years ago, millers collected their payment from farmers in the form of ground grain or flour. This payment was called a "toll", and the toll box was used to measure it.

Morse said the exhibit construction has been underway for about three years. Although much of the equipment in the exhibit is original, the gigantic timbers supporting the machinery have all been recently hewn from large oak logs.

In addition to the Rose Garden Mill, PennAg members will also be viewing another MarkeTechs display. That display, to be erected in the group's Penn Harris Motel convention headquarters, will also tell a story of early Pennsylvania milling. It will use old tools and artifacts on loan from a number of PennAg members.

JOHN B. KURTZ

R.D. #3 EPHRATA, PA

717-354-4616

Hay prices are mostly steady, but...

(Continued from Page 1)

explained. "But horse owners still need top hay because green hay can't be fed to them. For about the next six weeks, the old hay should continue to have good prices."

He believed that dairy farmers hadn't made any of the first of the 1978 crop yet but he added that as soon as the weather cooperates, farmers will be out in the fields cutting hay. Thinking ahead to the new hay prices, he looked for prices to be steady with last year's prices.

John Zimmerman, chief of livestock marketing of the bureau of marketing of Pa., said that state hay prices have been backing off for the past month.

"Now it's time for the first cutting of the season to come in," he noted. "Normally then, the prices go down."

But up to a few weeks ago, the hay crop looked like a repeat of last year's first cutting - short and not too plentiful.

"The rain helped that problem," he explained. "With the warmth and the moisture, the hay has mushroomed into a fair crop coming right along."

Richard McDonald, who works with hay prices in the bureau of marketing in Pa. also commented on the $230 price of hay.

"This load of hay went for an exorbitant price," he said. "Hay in no way is worth that."

He went on to say that he understood the race horse owner had stated that nothing is too expensive for his horse.

"If that's the case," he reasoned,"than it would be just like if a member of your own family got sick, you'd pay any price to get the medicine to make them well."

He found that the hay market has been around $100 to $150 for better alfalfa hay. He expects prices to continue to decline over the next few weeks.

"The big question always is 'What will the first hay of the new season bring?' For that answer, we can only wait and see," he commented. "Hay prices are strictly supply and demand."

A quick look at hay prices this week throughout the **Lancaster Farming** area found Green Dragon hay prices, Ephrata, Pa., bringing $90 to $115 for alfalfa hay with a few going as high as $132. Regional hay prices for this past week found alfalfa hay bring $90 to $100, with a few up to $125.

At the Harvey Z. Martin hay market, Leola, Pa., this week alfalfa hay went from $77 to $90, with a few from $102 to $137. Alfalfa hay prices from New Holland ranged from a low of $94 to the high mentioned above.

At Vintage Sales Stables, alfalfa hay brought $98 to $112. Three loads of new 1978 first crop alfalfa and rye hay were also sold for the price of $75 per ton. The hay, which was from Romansville, Chester County, had been baled on Tuesday, and according to Robert Frame, at Vintage Sales Stables, the hay was awfully heavy and green. If it had been dry, he estimated that it probably would have brought around $125 to $130 per ton.

Feeder pigs drop as much as $20

HARRISBURG – The top of the feeder pig prices fell sharply this week, according to the Pa. Livestock Auction Summary, a survey of 17 livestock auctions.

Feeder pigs sold by the head brought $1 to $3 less this week while those sold by the hundredweight were mostly $3 to $10 lower, with spots $20 lower.

According to John Zimmerman, chief of livestock marketing, bureau of marketing in Pa., it was the top end of the market which went down.

"The bulk of the feeder pigs are moving as before," was his comment. "I really don't see how the top of the market can hold out at the high prices much longer." He went on to say that he doesn't expect the feeder pig market to have the extremely high prices in the next few weeks.

"A lot depends on the weather," he related. "When the corn is all in the ground and farmers see what is coming up, it may make a difference. If it looks like it will settle out, then the market should start easing around mid-June. That's what should happen if it's a normal season."

"If the corn doesn't look good, there might be more pigs put on the market, which could lower the prices," he added.

He stated that in the last couple of weeks, bidding for the feeder pigs has been extremely high.

"I think it could be a case of people bidding and then the bidding becoming hotter, and people ending up going higher than they intended to," he stated.

The market should back off in the future, he reasoned.

"I'm not saying pigs will get real cheap," he explained. "But those high prices will settle down."

Zimmerman added that by the beginning of next week he will be able to determine a better idea of which way the feeder pigs prices are heading.

xxx

Control of entry for motor carriers is governed by the ICC which requires each operator to prove a need for its specific service and that the proposed service is consistent with the public interest. In fiscal 1976, the ICC granted 488 applications (about 80 per cent) for operating authority for new motor carriers. In addition, many existing carriers were granted authority to expand their operations.

Changing Jobs

Two college presidents were discussing alternatives to their current employment status "I think I'd like to run an orphanage," said one "No parents to contend with" "I'd rather run a penitentiary," said the other "No alumni pressure groups"

Human brucellosis

(Continued from Page 22)

including emotional disturbances and psychoneurosis.

Diagnosis is less of a problem when a doctor knows his patient has been in contact with infected animals or raw milk. "If you suspect that you may have brucellosis," said Dr. Becton, "don't delay in seeing your physician.

"There is no dependable or practical form of drug therapy for animal brucellosis, said Dr. Becton, "but antibiotics are quite effective in treating human cases."

Inadequate treatment may result in a relapse according to medical authorities. Chronic forms of the disease usually require more rigorous and prolonged therapy.

"Fortunately," said Dr. Becton, "brucellosis is preventable. Its incidence in man has dropped dramatically with the containing and elimination of animal infection. But as long as some livestock continue to harbor infection, human cases will continue to occur."

On the farm or ranch, the greatest danger to people comes from contact with the placental tissues or other discharges of infected animals. Dr. Becton recommended the following precautions:

•Clean contaminated areas such as calving pens and animal isolation areas;

•Wear protective gloves when assisting animals giving birth or aborting, and scrub well afterward;

•Carefully dispose of aborted fetuses and contaminated placental tissues (burn or bury them);

•Thoroughly clean and disinfect areas where abortions have occured; and

•Avoid touching your eyes, nose or mouth until you have washed your hands after handling animals (especially newborn) or raw milk or milking equipment

"Habits of personal and area cleanliness are important," said Dr. Becton, "even when no known diseased animals are involved. Also important is the precaution to avoid drinking raw milk or eating any of its by-products. Pasteurization is simple and quick. It can save much suffering.

"Ultimately," said Dr. Becton, "the best prevention will be the eradication of brucellosis in livestock."

While some companies look for ways to build bins cheaper, we find ways to build bins *better*. Bins that will last longer, look nicer and protect grain better.

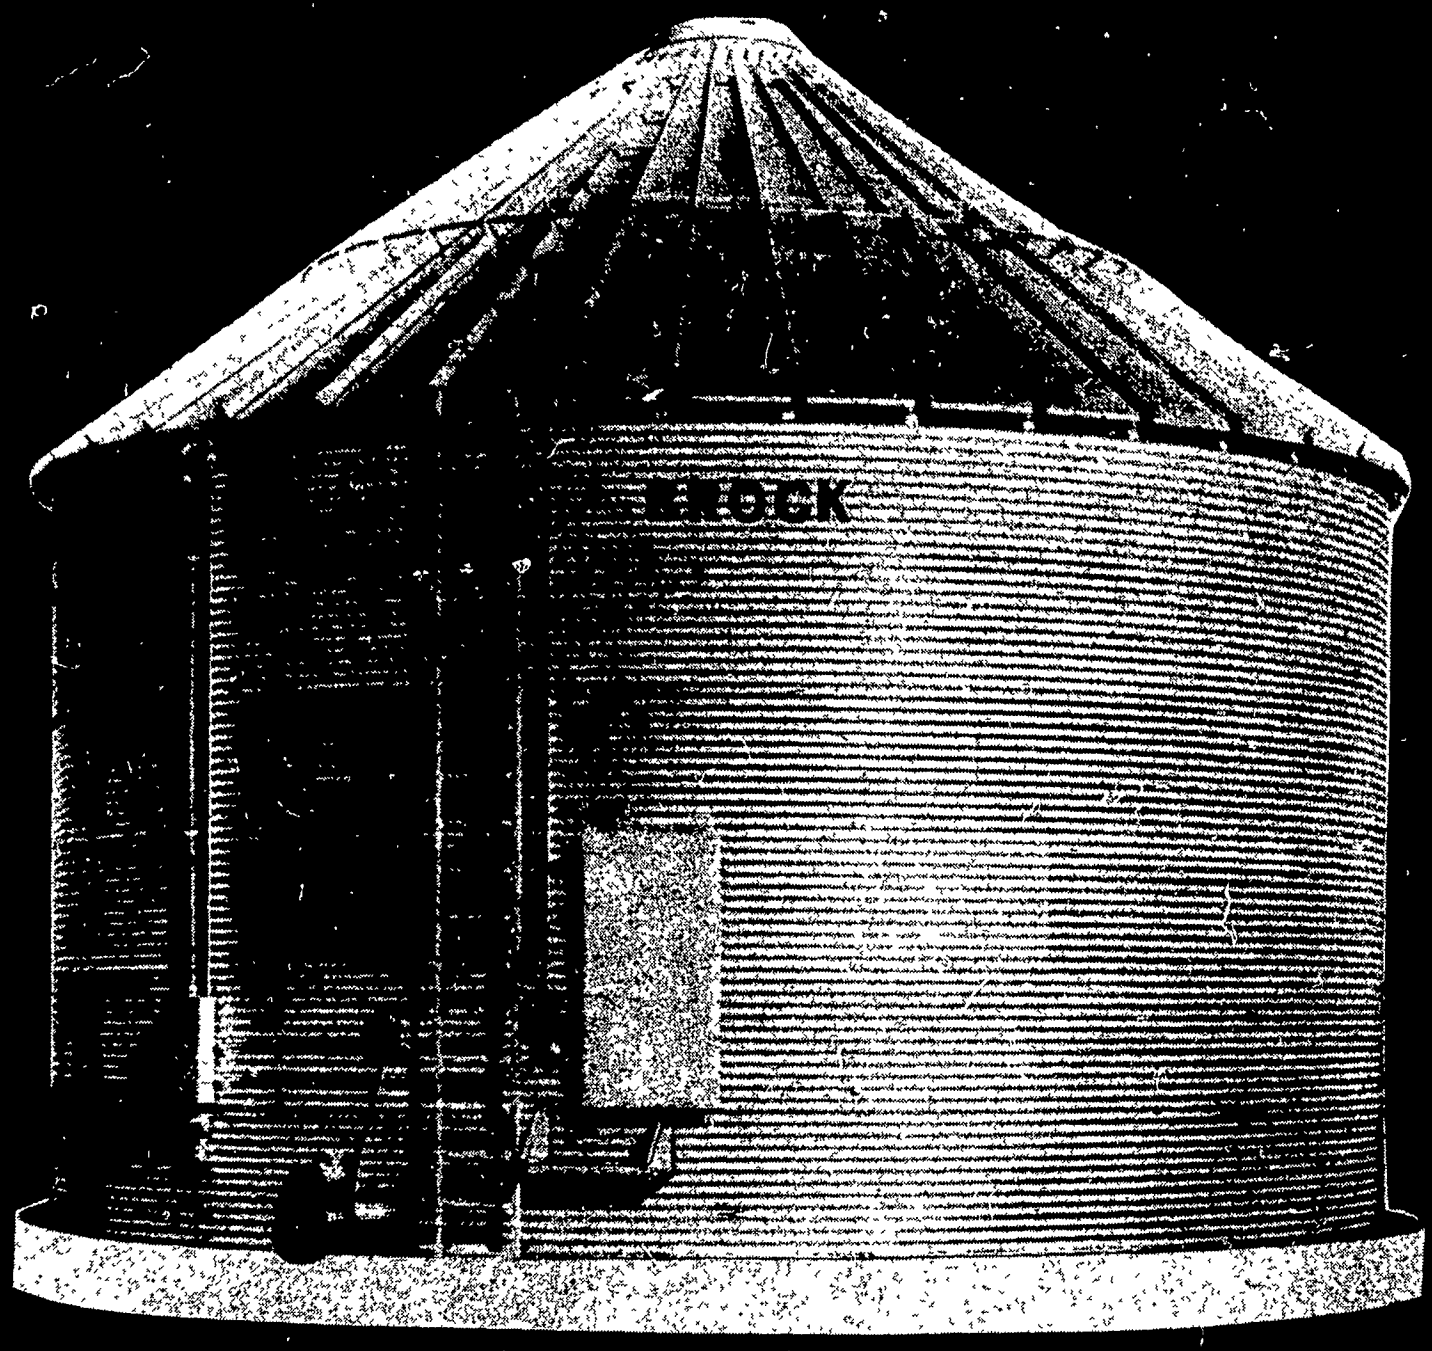
That's why we use only prime high-tensile steel. And precision form and punch each piece.

No, we won't cut corners. Because in the long run, cutting corners would just cost you more money.

For more information about all our money-saving design features, just write for a copy of our latest catalog.

BROCK Hershey Equipment Company, Inc.

There are 10 ways we could cut our price. Any one of them will cost you.



- ☐ Reduce the 40-inch fill hole width to 24 inches.
- ☐ Eliminate the exclusive fill hole collar seal.
- ☐ Eliminate the circle of safety steps.
- ☐ Eliminate the adjustable roof stiffner ring.
- ☐ Eliminate 3-inch high roof ribs.
- ☐ Make the roof pitch less than 35 degrees.
- ☐ Eliminate the safety handrail by the manhole.
- ☐ Eliminate the tab between each rafter.
- ☐ Switch to a lighter gauge steel sidewall.
- ☐ Use lower grade bin bolts and washers.

Agriculture bill draws fire

(Continued from Page 1)

Agricultural representatives would be a minority on the board.

This board would be given the power to determine production costs on farm products, allocate the crops farmers can plant and market and establish government loan rates.

"Farmers and ranchers are opposed to the continued growth of a government which is increasingly intruding into their everyday lives," Farm Bureau said. "Farm Bureau members are increasingly concerned about the growing power of the government regulatory agencies which, in effect, are enacting more laws than the legislative branch."

The Bill, which has an identical measure up for consideration in the House of Representatives, was introduced by Senator Kaneaster Hodges, Democrat of Arkansas. Co-sponsors of the legislation are senators Daniel Bumbers, (D-Ark.); Orrin Hatch, (R.-Utah); James Abourezk, (D.-S.D.); and Frank Church, (D. - Idaho). The House version of the Bill was introduced by Arkansas Democrat Ray Thornton.

The Board of Agricultural Governors would number 21, 12 of whom would be appointed from Farm Credit Districts. Since there are four Farm Credit Districts in the country, three would come from each District. In addition, the secretary of agriculture would nominate board members – three of whom would subsequently be appointed by the President. Six of the 15 on the Board would represent consumer groups, organized labor, and business management.

The Board is designed to set up a cost-of-production index for all commodities, establish production levels for loan guarantees, oversee trade agreement negotiations and make production adjustments for all commodities.

A controversial measure, the Consumer and Agricultural Protection Act receives most of its support from members of the American Agriculture Movement. Lonnie Arbuthont, a wheat and feed grains farmer and cattleman from Colorado, was among those who testified in favor of the Act this week. He said:

"The grass roots populace feels that we're not being well represented; actual producers have no representation in the Department of Agriculture. The 15 agricultural members of the proposed Board of Governors would be actual bonafide producers of food and fibre. The Bill does not guarantee anyone a profit, but it does give me and any other producer a chance to keep our heads above the water if we are efficient and productive."

Aside from the AFBF's opposing viewpoint, Ray Fitzgerald, administrator of the Agricultural Stabilization and Conservation Service, also spoke against the Act. He says:

"The net result would be higher farm incomes in the aggragate, but lower returns for livestock and some crop producers; a reduction in exports, and tight controls in production. Food prices would jump accentuating inflationary pressures and slowing the overall economic growth. It would be a move to heavy government controls and regulation in agriculture."

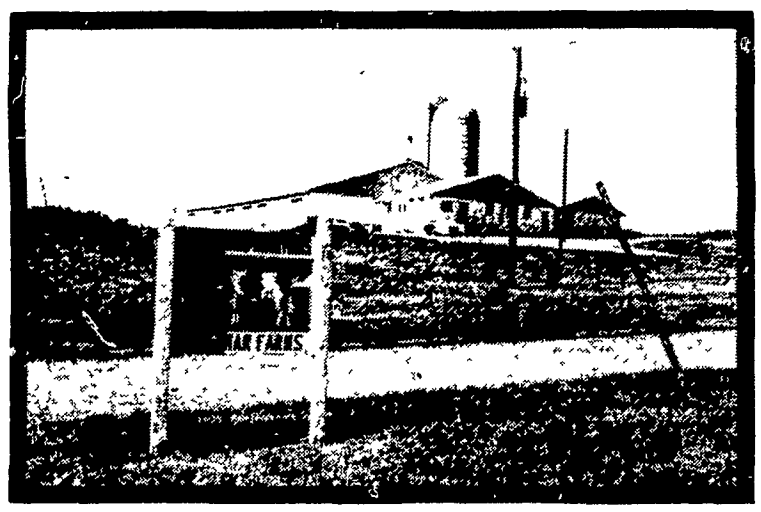
Silo King On Baled Hay

Harold and Wayne Lesher of Way-Har Farms in Berks County tell of their experience in using **Silo King** on baled hay.



The Lesher Brothers Dairy Set-Up.

Harold on his way to auction with a load of their top quality hay.

"We feel that hay is the best cash crop (return per acre) a farmer can raise in this area today. We had 400 acres of hay last year and we baled over 26,000 bales plus filling our 20x50 silo twice with haylage. We baled very little rained on hay, but we did bale a lot that was not fit to bale because of weather conditions. By using **Silo King** we were able to bale the hay at a higher moisture level which helped us to beat the weather and save more nutrition."

"We feed over 200 head of dairy livestock and sell the remainder of the hay. Last year we sold over 200 tons, and to our surprise we found very little mold in any of the hay; and it also kept its color."

"We have used **Silo King** 5 our of the past 6 years. We became sold on **Silo King** after trying another preservative for one year. The **Silo King** works and it is easy to apply by using the Gandy Applicator on our baler."

B.F. Goodrich will continue support for tractor pulling

UPPER SANDUSKY, Ohio – BFGoodrich, of "The Other Guys" fame has announced that its farm tire division will continue involvement with the sport of tractor pulling through its contingency support program of competitors using BFGoodrich tires.

According to Tom Kelley, Farm Tire Division head for BFG, tractor pulling has helped the company develop its' farm tire line, particularly the "Power Saver" radial series, the only farm radial tire presently on the market.

BFGoodrich will pay $200 per win at the 12 NTPA Grand National Circuit (GNC) events in the eight "big tractor" classes, in addition to the Indy Super Pull VI in February, 1978, contingent upon the use of BFGoodrich tires. For the first time, BFG will be involved with the NTPA Mini tractor division, paying $100 for each recorded GNC win on BFG tires.

Goodrich will also host the pullers with a hospitality area at the Wisconsin Dairyland Nationals on July 7, 8, 9 at Tomah, Wis., and at the National Tractor Pulling Championships at Bowling Green, Ohio August 18, 19 and 20.

In addition to the contingency awards, BFGoodrich will supply plaques to the top five Grand National Circuit finishers in each class at the NTPA awards banquet in Indianapolis, Ind. on December 2.

Limited partnership could be farmer's option

NEWARK, Del. – The limited partner arrangement appears to be a good one for farmers who need large amounts of capital but who want to continue to run their own farm businesses. In fact, the legal requirements of limited partnerships prevent those partners from becoming active in the management process. A limited partnership provides an opportunity for the nonfarm investor because his liability is limited to the amount of his investment in the farm business. Unlike a farm corporation, if a limited partnership operation gets in trouble each of the partners is liable only to the extent of his financial interest.

There are other advantages to limited partnerships, including some tax possibilities, but each limited partnership has its own unique circumstances. Within reason they can be designed to fit the needs of the partners.

Limited partnerships provide an ideal way for a widowed mother to turn the farming operation over to a son. She can continue to share in the profits and can help her son financially, yet she avoids the hazard of unlimited liability. Limited partnerships also offer opportunities for heirs who live in distant locations and who have no interest in actually managing a farming unit.

A partnership arrangement should be entered into very carefully among people who are fairly sure they understand the deal and can get along with each other. Certainly, limited partnerships require a lot less day-to-day shoulder rubbing and decision making, but there are still opportunities for misunderstandings and problems.

The farmer who wants to be his own man, make all of his own decisions, and be accountable to no one, may find the legal restraints and the real or imagined pressures from limited partners unbearable. On the other hand, the fellow who's looking for capital and has the ability to run a farm might find this an excellent way to get into farming or to move up into a size of farming that is profitable.

One note of caution. There are many legal and financial pitfalls involved in setting up such an arrangement. There's definitely a place for a good lawyer and a good accountant in the thinking and planning process.

Electronic scale on grinder-mixer helps make proper rations easier

NEW HOLLAND – Why should a farmer buy an electronic scale on a grinder-mixer?

"Because it pays," says Tim Wadsworth, product manager for grinder-mixers at Sperry New Holland. "Farmers and ranchers using grinder-mixers with scales can take advantage of lower-cost bulk delivered supplement and still be real sure of a balanced ration."

Penn State's Extension livestock specialist, Lester Burdette, points out that ration balances for most efficient gains are different for different stages of growth. Protein quality is almost as important as the quantity for a young pig. But he's of the opinion it's probably fair to assume an unbalanced hog ration would mean consumption of an extra 3/10th of a pound of feed for each pound of gain - say a 3.5 or 3.7-to-1 ratio instead of 3.2-to-1 feed/gain ration.

That's not counting the feed rooted out of the self feeder. This means a 40-pound pig would need an extra 54 pounds of feed to make the 180 pounds of gain it takes to reach the 220 pound market weight if the ration isn't well balanced. Electronic scales to help make ration balancing easier can be factory-installed or field-installed on grinder-mixers.

A steer on a high grain ration will need about eight pounds of feed for a pound of gain to get all the way from 500 to 1100 pounds. A little less per pound in the early part of the feed but then a little more protein is needed. An unbalanced ration can mean an extra pound of feed per pound of gain or about 600 pounds more feed per animal.

Steer supplement is a little cheaper than hog supplement because protein quality is less critical for ruminants. You can use some urea. But, that extra 600 pounds per animal adds up to a substantial amount of money that can be saved through balanced rations.

The grinder-mixer product manager points out that a mistake in ration balancing can throw animals off feed and create health problems in addition to wasting feed and hurting conversion rates. "The farmer can mix rations properly with his grinder-mixer, but it is much easier to do a good job of proper ration balancing when a grinder-mixer is equipped with an electronic scale. Bulk purchases and proper ration balancing make electronic scales on your grinder-mixer pay off both ways," Wadsworth says.

Weeds taking over

Earliest of weeds, ground ivy now
And crabgrass and the prickly sow
Trhust up among the virgin peas
And fetch the gardener to his knees.

Now, of my threescore years and ten,
Sixty will not come again,
And take from seventy years three score,
You're left with just a decade more.

And since to eat three times each day
Is nature's charitable way,
I'll ten times more fall on my knees
To weed my weed confounded peas.

(with apologies to A.E. Housman)

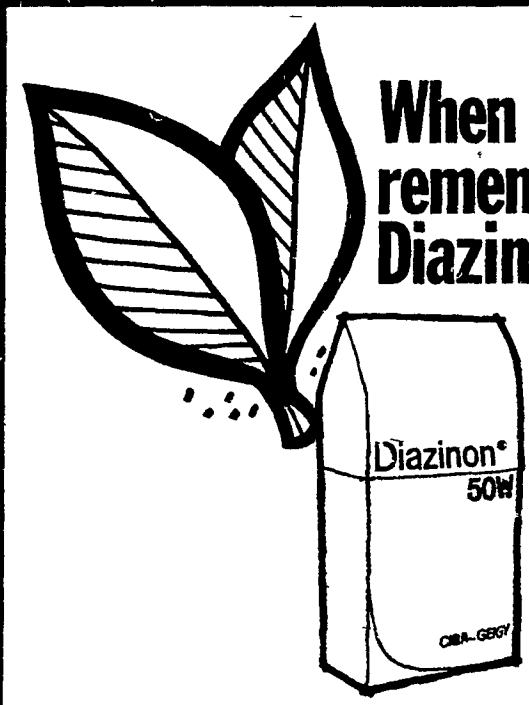
When you transplant, remember the Diazinon...



. . . no matter what you used to control cutworms ahead of transplanting.

Diazinon in your transplant water gives your tobacco transplants that extra-zone of protection. It costs so little you can't afford to take a chance on cutworms.

Diazinon in your transplant water assures better survival of transplants, and a more uniform stand that's easier to handle all season long — at suckering, topping, harvesting, and curing.

Counter-cyclical approach to quotas suggested

WASHINGTON, D.C. – The National Cattlemen's Association this week recommended a counter-cyclical approach to quotas under the Meat Import Act of 1964.

This and other recommendations were made during a House Ways & Means subcommittee hearing on proposed changes in the law. Outlining NCA's proposals to the subcommittee on trade were Richard A. McDougal, Lovelock, Nev., president of the association, and Sam Washburn, Fowler, Ind., chairman of the NCA foreign trade committee.

McDougal urged that Congress adopt the Bentsen-Curtis bill (HR 5052), which includes the counter-cyclical approach and which previously was passed by the Senate.

He pointed out that a counter-cyclical quota formula could provide more stable supplies and prices over the length of the 10-year cattle cycle, benefiting both producers and consumers. Quotas would be in inverse proportion to domestic beef supplies – increasing when U.S. production was down and decreasing when production was cyclically large.

The quota formula in the present law, the NCA spokemen noted, is tied directly to U.S. production levels. This compounds supply and price problems because imports are permitted to rise at the very time domestic supplies already are burdensome and are required to decrease at the very time domestic output is decreasing. The result is sharper price fluctuations, both up and down, than otherwise would be the case.

Under HR 5052, NCA explained, annual import quotas would be adjusted in relation to domestic cow beef supplies – the best indicator of stages in the cattle cycle. Also, it is cow beef with which imported meat is most competitive.

Other NCA recommendations, as provided in the amendments in HR 5052, are:

1. Include all forms of beef and veal under coverage of the Meat Import Act. This is necessary to prevent the kind of circumvention of the law which has occurred in the past. (The present law covers only fresh, frozen and chilled meat.)

2. Institute a semi-annual quota system within a year's import quota, thereby preventing disproportionate imports during a short period.

3. Modify presidential authority to suspend the quotas. Suspension would be permitted only in time of true emergencies. If benefits of a counter-cyclical appraoch are to be realized, the approach must be followed at both extremes of the cattle cycle, McDougal emphasized.

Also, this amendment would eliminate periodic political controversies over quotas, and it would result in quota determination and import levels under a known set of rules – again providing more stability. In addition, it was noted, this amendment would provide more predictability, which is particularly important in an industry with a long production cycle.

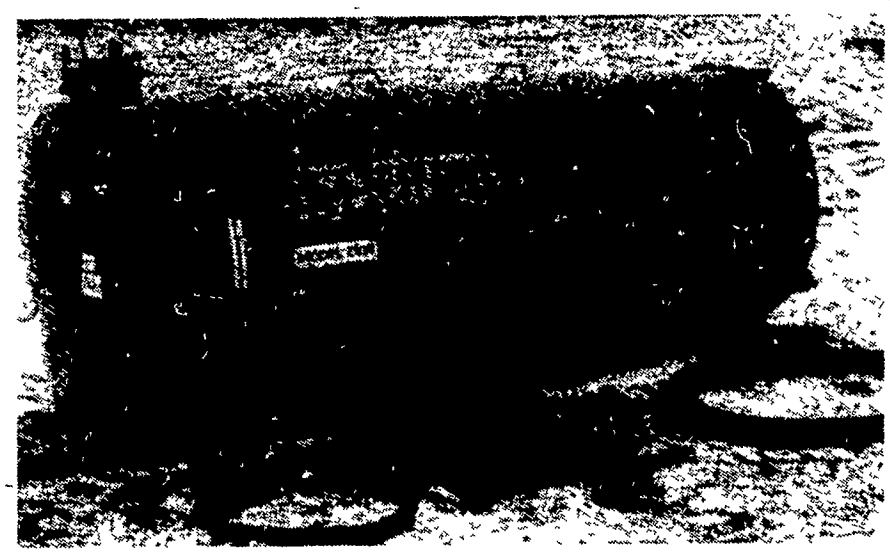
McDougal and Washburn told the Congressmen that beef imports over a 10-year cycle period would not be changed under the new proposals, but the sharp ups and downs of supplies (and prices) would be moderated.

NCA discounted claims that the U.S. cattle industry is incapable of supplying enough ground beef to meet a growing demand and that increased imports of manufacturing-type beef are indispensable. McDougal said the industry already supplies most of the nation's ground beef needs – even during times of declining cow beef production. Furthermore, with proper incentive, U.S. cattlemen can produce, and already are producing, more manufacturing-type beef.

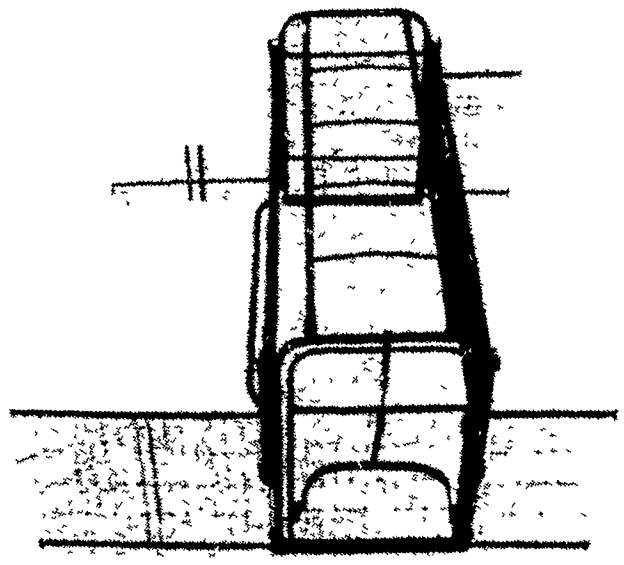
Commenting on overall trade policy, Washburn reminded Congress that U.S. policy on beef trade is more equitable than that of any other country. The U.S. is the largest beef importer in the world, and, through the Meat Import Act, it guarantees a certain level of access to the U.S. market – something which no other importing nation does.

TRUCK MOUNTED LIQUID MANURE SPREADER

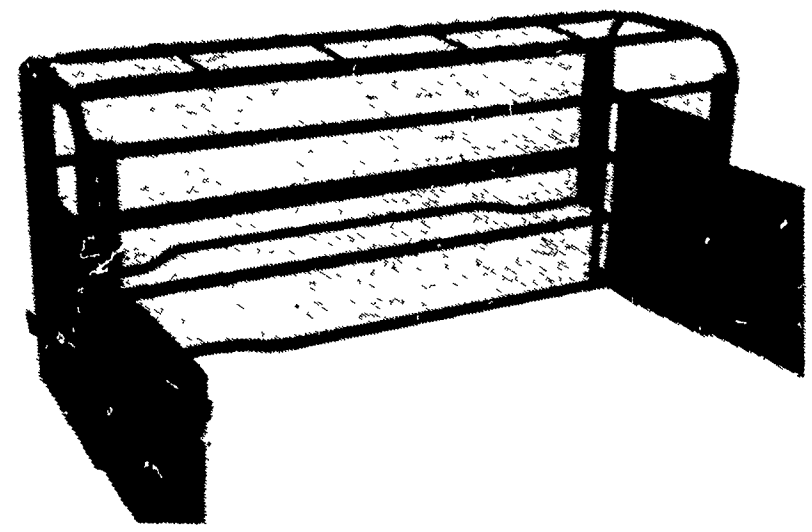
Vacuum or Auger Matic Models



Years of experience and engineering know-how have made Pearson Bros. Co. an industry leader in the manufacturing of quality truck mounted units. Pearsons have 800, 1100, 1500, 2100, 2600, 3150, 3600 gallon sizes (standard or open door) in stock for truck mounting. Each unit is complete with pump, pump mounting stand with pulleys and belt drive assembly, angles to bolt tank to truck, fill hose, deflector for spreading, moisture trap and hose for automatic shut off which provide more than adequate protection against liquids entering the pump. All components are match-mated to function together smoothly.



THE NEW "BETTER-BILT" FARROWING CRATE



WHY "BETTER-BILT" CRATES WILL MAKE YOU MONEY

- Better air circulation.
- Accommodate more sows in less space.
- Farmer-tested.
- All-steel electric arc-welded construction.
- Self-locking gate.
- Adjustable side rails, 8 to 12 inches from floor
- You can completely disassemble for storage by removing just five bolts.
- Crates can be quickly and easily changed to 22", 24" or 26" widths
- Available in single units or in series
- Holds any sized sow — 200 lbs. or 700 lbs.
- 24 inches by 6 feet 6 inches or 7 feet sow pen.
- 60 inches wide, including your pig stalls.
- Can be used in any building available, such as cattle shed, chicken house, barn, or pull-together hog houses
- Made to last indefinitely of steel pipe, 1⅓" O.D. — not thin wall tubing.
- Panels can be shortened or lengthened to fit any house or designed around obstructions
- No extras to buy
- New style crates weigh approximately 208 lbs
- Free Space Planning Service
- 100 Per Cent Satisfaction Guaranteed.
- Adjustable Features — Sides individually adjust up or down to give desired height to side openings. Accommodates large or small sows.

OPTIONS

- 6½' or 7' Lengths.
- Wire Mesh or Solid Panels.
- Tabs on Arches (Replaceable-for bolting to slotted floor.)
- Swinging Gates.
- Swinging Feeders
- 7 Different Feeders & Waterers

GOOD USED SPREADERS

PRICED TO SELL

- 1875 gal. Tandem Spreader
- 1500 gal. Vacuum Spreader
- 1250 gal. Spreader
- 2-12 Pit Pumps
- 1-Piston Transfer Pump (Like New)

Meat board seeks action on 'deceptive' ads

CHICAGO, Ill. – The National Live Stock and Meat Board has formally requested the Federal Trade Commission to order four food manufacturers to cease and desist from "false, deceptive and misleading" advertising which claims health benefits for their meat substitute and vegetable oil products.

According to Meat Board President David H. Stroud, the complaint is the first step in proceedings which, it is expected, will force the companies to discontinue their present advertising.

Named in the Meat Board complaint were: Miles Laboratories, makers of Morningstar Farms meat substitute products; Standard Brands, Inc., makers of Fleischmann's margarine; Best Foods Division of CPC International, Inc., makers of Mazola corn oil and margarine; and PVO International, Inc., makers of Saffola margarine and vegetable oil products.

In addition to requesting a cease and desist order, the Meat Board has asked the FTC to seek a temporary injunction prohibiting the advertising pending issuance and adjudication of a formal complaint. The Board also asked that the four firms be required to undertake corrective advertising as deemed appropriate by the FTC.

Stroud stated in the complaint to FTC Chairman Michael Pertschuk that "resolute Commission action at this time against the companies named will tend to promote truthful advertising by all manufacturers pending the adoption of the fat and cholesterol trade rule."

The Meat Board said Miles' advertisements make "unfair and deceptive" representations: that health, particularly protection against heart disease, will be improved by consuming Miles' products and avoiding beef, bacon, ham, or pork sausage; and that consumption of Miles' products will reduce the amount of cholesterol in the blood. The Board charged further that Miles' advertisements would have consumers believe they are jeopardizing their families' health by not using Miles' products and by consuming meat.

Noting that "it has not been established" that protection against heart disease will result from consuming Miles' products, the Meat Board said, "Neither all, most or necessarily the best informed in the medical profession advise avoidance" of beef, pork, lamb, and other meats by the general populace.

The Meat Board cited similar "unfair, deceptive practices" by Standard Brands, Best Foods and PVO. The complaint stated that advertising which stresses "no cholesterol" is erroneously perceived by consumers as a claim that the advertised product will be beneficial in preventing heart disease.

Farm strikers left bad taste

WASHINGTON, D.C. – Word from here is that farm strikers' antics, which included tieing up traffic, loosing animals at the White House, staging demonstrations and breaking doors and windows, left a bad taste. It will take months to erase. One observer said, "There are congressmen who hope they never hear farmer again." Militant tactics seemed to have aroused anger rather than sympathy as evidenced by one congressman who publicly scolded strikers saying, "Consumers and taxpayers don't have luxury of being able to take three months off," to lobby in Washington. What do you think?

'Miracle products' not registered yet

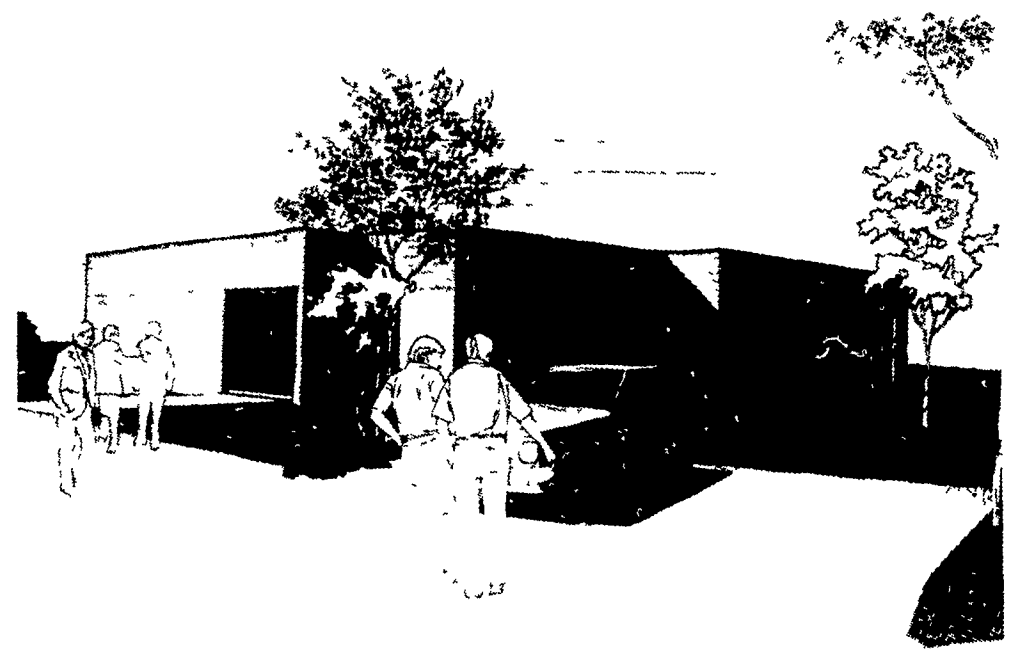
HARRISBURG – Pennsylvania's new fertilizer law status may be the reason why market is now flooded with soil conditioners, wetting agents, soil inoculants, microbial fertilizers and other so-called miracle products. The new fertilizer law took effect Feb. 1 but registration of all fertilizers, soil conditioners and plant growth substances has been delayed until July 1 so rules and regulations can be written. It's anticipated many "miracle products," won't pass registration so they're "making hay while the sun shines," observers note.

Weaver to construct new building

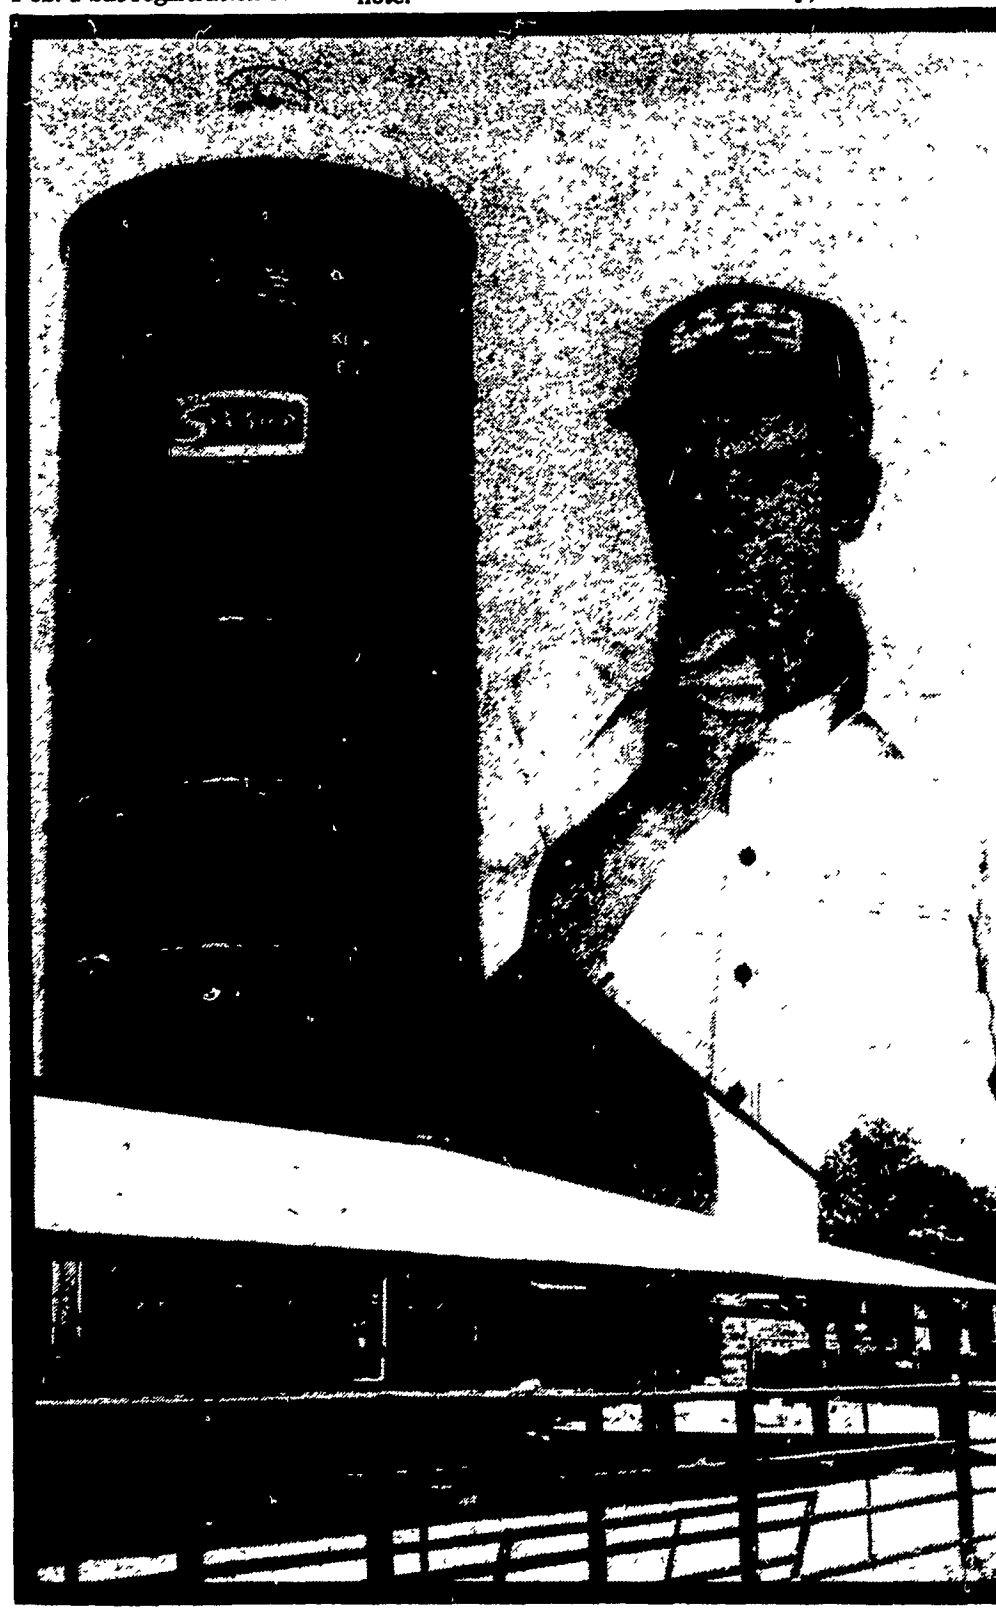
NEW HOLLAND – Victor F. Weaver, Inc., has announced plans to begin immediate construction of a new 11,000 square foot office building to be located on the corner of South Custer Avenue and Orlon Street, New Holland.

The new two-story building will house the Weaver financial division. The first floor of the facility will house the computer operations and services as well as record storage areas. The second level of the building will house all general accounting, cost accounting, credit, data processing, and programming staff plus executive officers and conference rooms.

Designed by the Lancaster architectural firm of Haak, Kaufman, Reese it is scheduled for completion by February, 1979.



Above is an artist's rendition of the new 11,000 square foot Weaver financial operations building under construction in New Holland.



VERNON J. LEININGER

Owner: KO-KA-LE-KO Beef & Egg Ranch

"I am very happy with the quality of workmanship on our new 27'x81' Sealstor.

"We anticipate filling the structure with many feeds as we grow them on our farm. Alfalfa haylage - wheatlage - rye - corn silage - high moisture ground ear corn.

"Due to the economy and versatility of the Sealstor, our family selected this structure. This is the way we will be assured of top quality roughage and grain for our 600 steers."

Ritchie heads Leb. Co. FFA unit

(Continued from Page 1)

Bomgardner, Annville, 15-year-old Dave will also be the vice president of the Little Dutchman Chapter for the 1978-'79 school year.

Holding down the position of secretary is one of two female officers in the county organization, Susan Heilinger, from Eastern Lebanon County High School. Miss Heilinger is the 15-year-old daughter of Mr. and Mrs. Richard Heilinger, Newmanstown.

In the position of treasurer is Kenneth Arnold, also from ELCO. Arnold, the son of Mr. and Mrs. John Arnold, Schaefferstown, has previously held the positions of chaplain and reporter in his home chapter and has been selected to head that organization for the 1978-'79 school year.

In the reporter's station for the county unit will be Roy Shirk, from Cedar Crest High School. Shirk is the son of Mr. and Mrs. Carl Shirk, Lebanon. During 1977 Shirk held the role of treasurer in his home chapter and will now fill the position of vice president for that group.

Another member from the Cedar Crest FFA is Lester Heinaman, who will assume the duties of sentinel. The 17-year-old son of Mr. and Mrs. Isaac O. Heinaman, Quentin, Lester will serve as the president for the coming year in his home chapter. Prior to this honor, he held the offices of assistant sentinel and sentinel in his home unit.

A second young lady in the Lebanon County unit is Bonita Kelly, the daughter of Mr. and Mrs. Richard B. Kelly, Quentin. Miss Kelly's role in the organization will be parliamentarian.

Rounding out the officers for the county organization will be Randy Behney, a member of the Northern Lebanon FFA chapter. Behney will assume the duties of chaplain. Behney is the son of Mr. and Mrs. Guy A. Behney, Myerstown 3.

According to Ritchie, who has earned a number of awards at the county level, including first place in the Lebanon County public speaking contest, first place in the quiz contest, and second in parliamentary procedure at the state level, under his leadership the main goal for the county unit will be to become recognized as one of the best county chapters in the state. Ritchie also wants to actively involve more people in contests and competitions and to improve the chapter in areas such as outdoor activities.

Some of Ritchie's other honors leading to the presidency of the county unit include star greenhand in his home chapter, the county chapter farmer degree, two years work experience and a blue ribbon at the county level for employment at C.F. Manbeck poultry processing plant, Fredericksburg. Past offices Ritchie has held include chaplain and assistant secretary in the Norlebco FFA chapter. For the 1978-'79 year, Ritchie will serve as vice president in his school's FFA unit.

The officers and advisor of the Lebanon County Chapter of the Future Farmers of America are: (left to right) back row, Bonita Kelly, David Bomgardner, Roy Shirk, Robert Kreider, and J. Ray Bickel, advisor. Seated are: Ken Arnold, Susan Heilinger, Scott Ritchie, Lester Heinaman, and Randy Behney.

Robert Kreider has a large list of awards won up to this time.

Those honores include star greenhand in his home chapter; the chapter scholarshp honor from the Little Dutchmen FFA; beef production with the Annville-Cleona chapter; public speaking award in home chapter; National Honor Society; first place in county greenhand quiz contest; first in the county creed contest; and member of the first place parliamentary procedure team at Penn State last year.

Kreider lives on a 180 farm which includes the raising of 100,000 broilers.

Bomgardner also tied with Kreider in the county greenhand quiz contest. The historian for his chapter during 1977-'78, Bomgardner earned a state gold medal for his field corn project book.

Miss Heilinger, the star greenhand from her chapter, will serve as vice president of the ELCO FFA during 197-'79. In the past she has won foundation awards in dairy production and ornamental horticulture. She is a part of the state FFA band and served as secretary of her home chapter in the 1977-'78 school year.

Arnold is an experienced dairy showman, having taking the grand champion FFA Guernsey at the Lebanon Area Fair during 1977. Presently involved with two work experience projects, Arnold is emplyed by Shaeffer's Lawn and Landscaping, Myerstown, and Raymond Getz, Myerstown, as a farm laborer.

Parlimentarian Bonita Kelly hails from Cedar Crest High School and Lebanon County Vo-Tech, where she is a horticulture student. The 15-year-old sophomore has earned a demonstration award from the Lebanon County Vo Tech FFA.

Lester Heinaman, a junior at Cedar Crest, is presently employed at Plain and Fancy Egg Ranch, Elizabethtown, as an auto loader operator. In his home chapter he has earned the agriculture mechanics award.

Behney is also a dairy showman, having taken the reserve grand champion Jersey at regional FFA competition in 1977. He also earned a showmanship award at the state dairy show and took a first placing in the county with his dairy project book. During the 1978-;79 school year he will serve as the Norlebco FFA chapter president.

Reporter Roy Shirk has earned the star greenhand honor from his home chapter and the chain calf.

Each of the county officers is under the direction of J. Ray Bickel, vocational agriculture instructor at Northern Lebanon High School, who is serving as county advisor.

Garden Spot FFA hosts 1st graders

Farm tour fun even though horse got away

By JOANNE SPAHR

WILLOW STREET — Although their horse took off for the hills, and they had to saddle up one of their FFA members in its place, the Garden Spot Future Farmers of America Chapter staged a fairly successful farm tour on Monday and Tuesday of this week. Of course, their patrons didn't much care whether it was a horse or an FFA member who wore the saddle, just as long as they got a ride.

The "patrons" were first graders from the Strasburg Elementary School, Willow Street Elementary School, and Lampeter Elementary. All told, about 170 six-year-olds trapsed over the farm of Kenneth B. Garber, Willow Street R2, and, from the looks of things, really enjoyed themselves.

The tour was a project scheduled under the Food for America program, a national FFA program. It has been a long-standing tradition at Lampeter Strasburg High School, that, in order to orient the elementary students to agriculture, the first graders are taken on a farm tour every year.

This year approximately 20 FFA students were involved in planning and organizing the tour. For the most part, the FFA'ers were in the ninth, tenth, and eleventh grades.

Gerald Garber, on whose farm the tour took place, is a freshman this year.

The Garbers provided the farm, which included the rabbits, goats, dairy animals, and beef animals for the tour, and the students imported the other livestock they wanted the children to experience.

The tour was set up in 10 stations, each with a different animal or concept of farming for the children to learn about. A bell rung every seven to 10 minutes and the children moved from area to area.

Station one consisted of the shop and machinery tools; station two, the cows and milkhouse; station three, the silo room and calves; station four, the upstairs of the barn which involved the hay and straw; station five, the machinery shed; station six, the garden; station seven, a pig; station eight, the steer and bulls (including the medicine); station nine, horse, goats, chickens; and station 10, rabbits and sheep.

Mrs. Nellie Grubb, first grade teacher from Lampeter Elementary School, definitely felt the program was a beneficial one.

"They've come through with a lot of new ideas," she commented. "Most of my students don't live on farms, and the animals make quite an impression on them." In order to insure that the students grasp the concepts, she said she would follow up the visit to the farm with a lesson on what the children saw.

For the FFA members, as well, the tour was a rewarding experience.

"You get a feeling that maybe this is the only time they've ever been on a farm, and they're learning," stated an FFA'er. "They come up with really funny questions."

From the way it looked, it was a good learning experience for all involved.

Jerry Myer, president of the Garden Spot Future Farmers of America Chapter at Lampeter Strasburg High School, shows first graders a bolus gun.

Exact Height

Mount Everest is exactly 29,000 feet high When originally measured, surveyors feared the public would consider that figure an estimate—so they falsely reported the height at 29,002 feet

Good estate plan requires legal help

NEWARK, Del. – Farmers work hard and are known for their thriftiness. Most of the money they earn above that needed for living is invested in the farm business. With land values increasing each year, along with big investments in machinery, buildings and livestock, many farmers have an estate of half a million dollars or more.

This is the owner's property, and he has the right to say how he wants it to be distributed at death. But, points out University of Delaware Extension agricultural economist W.T. McAllister, if the owner doesn't exercise this right, the state of Delaware will distribute the property among the heirs, according to law. In many cases this will result in a very unsatisfactory division of the wealth that has been accumulated.

Some people draw up a hasty, vague will and think they have taken care of the job of estate planning. This is better than nothing, assuming it is a valid will. But a will is only the final step in estate planning, says McAllister. First of all, it's necessary to determine how best to structure the estate so that the heirs will receive maximum benefit from the property one leaves them.

Here are some of the things that a good estate plan should do. It should provide sufficient income for the surviving spouse and minimize state and federal estate gift taxes. A good plan will place the responsibility of estate settlement in the hands of someone capable of doing it and keep court costs to a minimum. One should avoid splitting the farm property among the family members and into small uneconomic units and provide enough cash for paying estate taxes and other costs without forcing a sale of the farm business.

Estate planning starts with a listing of all personal assets, as well as those owned jointly with others. Real property should be separated from personal property. Current market values should be placed on the assets. Notes should be made about any special treatment for family members or friends so that these provisions can be included in the will.

Having done all this, it's time for a person to seek legal advice on preparation of a will that will best meet one's wishes. The lawyer will prepare the formal part of the will, but he may suggest a call upon a financial advisor, a tax consultant, an insurance agent, or a bank trust officer as well. These people have the expertise needed to help a person meet all the requirements of a good and legal will.

Planning an estate and backing up this plan with a will is an easy thing to delay and neglect. Estate planning also costs some money, which is another reason for procrastination. But when put in terms of knowing that one has provided for the care of his spouse and family, avoided family conflicts and unnecessary forced sale of the farm property, and probably saved some tax dollars for his heirs, the need to tackle this undesirable job right now is unmistakably clear.

Trend confirmed

How ya gonna keep 'em down on the farm? The answer is, you can't. The February 1978 Reader's Digest noted that in 1975 one in every four Americans lived on a farm. Today only one in 25 does.

Tricky business

It takes the nerves of a high-wire artist and the patience of a brooding hen to be a top piano technician, says one of the men who is. Tuning, action-regulating and "voicing" of the instrument is tricky business. A piano consists of 12,000 separate wood, iron, steel, ivory, and felt parts. A wrong move on the technician's part can drastically alter the piano's quality of sound.

Sins Missed

When a preacher recently claimed that there are about 800 separate sins to be wary of, he was beseiged with calls People wanted to know which ones they were missing

THE NEW WHITE 378 ROW CROP CULTIVATOR ... SETTING STANDARDS FOR COMPARISON

If you're looking for a new row crop cultivator, don't consider yourself finished shopping until you've seen the all new White® 378 Cultivator. Here's a row crop cultivator that will seem to outdate others on the market.

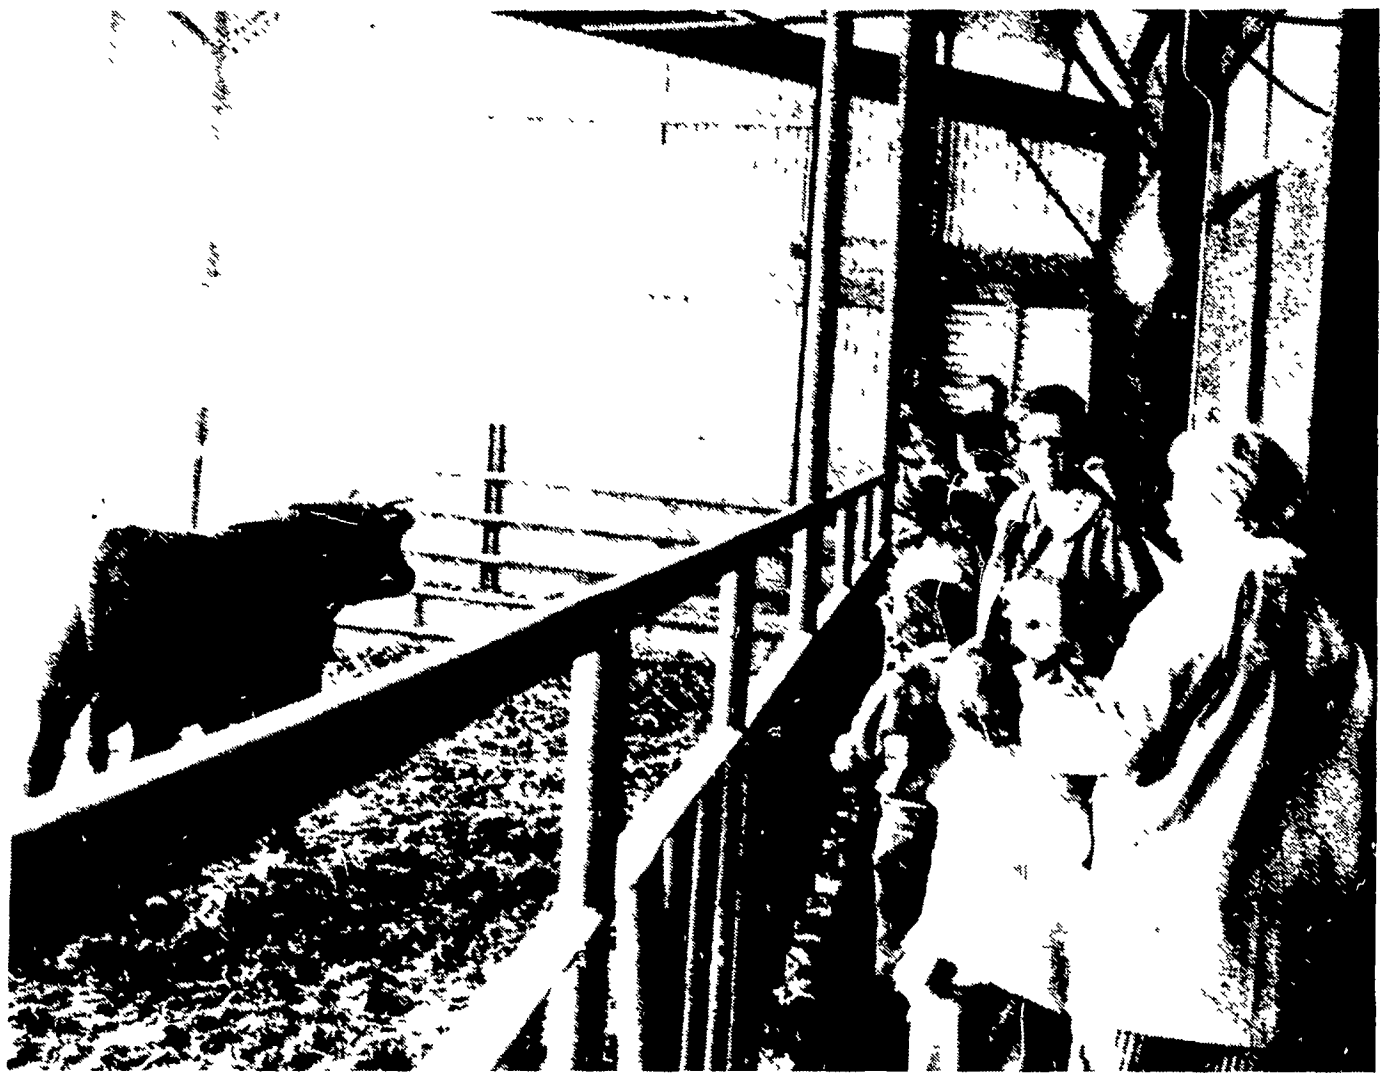
The first quality you'll notice about the 378 is its clean, rugged design and exceptional clearance. In fact, you have 18 inches of vertical clearance. That's nearly 3 inches more than most other makes. And its 5x7 inch main frame and 4 inch wide channel parallel links give you the weight and strength for the "stay-put" accuracy you want.

To help you beat the clock, the 378 is standard equipped with S-tine vibrashanks. So you can travel at speeds up to 8 mph knowing you're doing the best job possible uprooting weeds your herbicide left behind.

The 378 Row Crop Cultivator...available in four, six and eight row models with either a Category II or III 3 point hitch. Row widths of 36 and 38 inches are available in the 4 and 6 row models, while both the 6 and 8 row models may be equipped for 28 and 30 inch rows.

Stop by soon for more details on the all new 378 Row Crop Cultivator.

PERFORMANCE:
THE REAL REASON
YOU BUY
A CULTIVATOR



Forty Kindergarten and first grade children from the N.C. Schaeffer Elementary School, Laureldale, Berks County, recently visited the Rae Hix Farm, Mohrsville R1. They had the opportunity to see broiler chicks, dairy and beef cattle, and hogs.

Summer-stored grain needs to be warmed

NEWARK, Del. – Grain in storage that will be held on the farm into or through the summer months should be warmed up to 70 degrees Fahrenheit by the middle of June. This will prevent moisture migration that can induce spoilage.

According to University of Delaware Extension agricultural engineer Tom Williams, grain stored in bins of 2000 bushels or less usually do not require warming. Grain stored in larger bins, however, should be warmed five to 10 degrees Fahrenheit each month starting in April until the grain temperature reaches 65 to 70 degrees.

One can begin warming the grain with aeration fans on fair days when the average daily temperature remains 10 to 15 degrees Fahrenheit above the grain temperature. Average daily temperature is the daily high plus the daily low divided by two.

Air flows of one cfm/bu (common for drying fans) will need to operate about 15 hours to change the grain temperature, says Williams. An air flow of one-tenth cfm/bu (common for aeration fans) will have to operate 150 hours or six and one-fourth days to change the grain temperature.

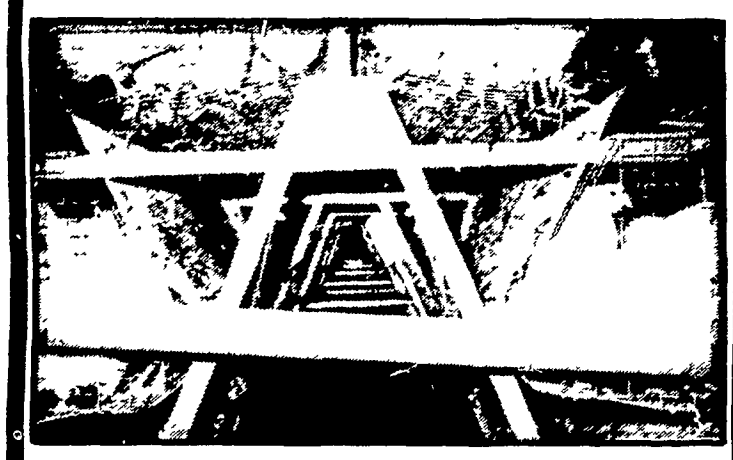
Aeration fans moving one-tenth cfm/bu or less air should be operated continuously until all the grain is warmed. Once a warming zone has started through the grain, it must be moved completely through since moisture tends to condense on the colder corn ahead of the warming zone. If the warm layer is stopped against the cool "wetted layer," corn in this zone may become musty and spoil.

The temperature of the grain can be checked by holding a thermometer in the exhaust air stream if the aeration fans are pulling the air down through the grain. This is also a good place to smell the condition of stored grain. Musty odors indicate spoilage.

It is unnecessary to continue fan operation after the grain has been warmed. However, operating the fans 15 to 20 minutes every week will move fresh air through the grain. If there is a pocket of grain that is deteriorating, the fresh air will likely pick up some of the musty odor and one will be able to smell this in the discharged air.

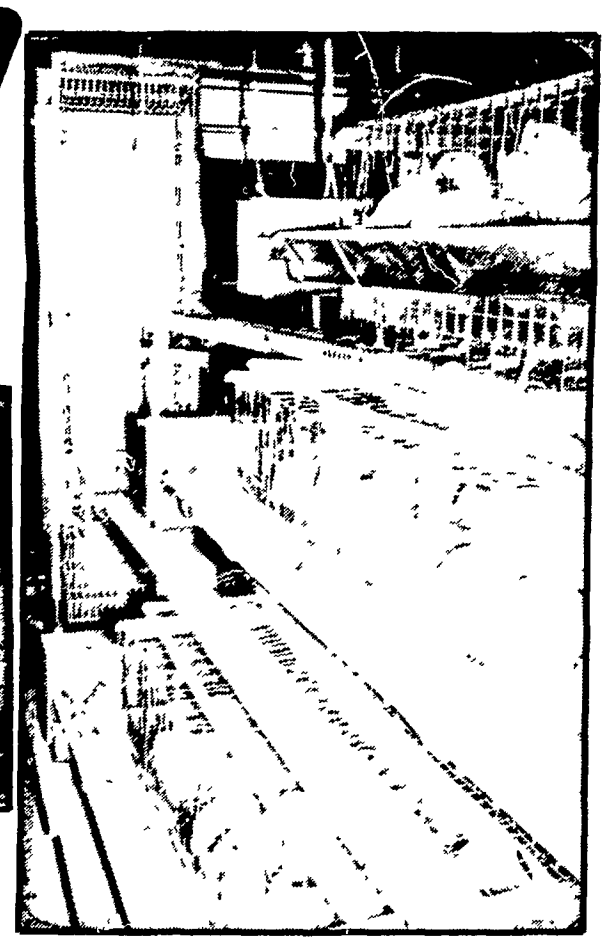
NORTHCO

High Density Work



VINYL DROPPING SHIELDS

eliminate the headaches of dropping boards and dropping board scrapers. Manure slides off the dropping shields and into the pit.



NORTHCO EGG GATHERING

uses plastic coated contact surfaces to move eggs from the cage to processing equipment, gently and efficiently.

THE RELIABLE FEEDER

FEED MIXING ACTION Northco's exclusive core auger mixes feed along the entire feed line to help prevent feed separation There are no hang-up spots where feed can become stale Uneaten feed is carried back to the hopper and mixed with fresh feed

LESS WEAR The core auger floats on a cushion of feed There's virtually no metal to-metal contact which means less wear

LESS WASTE A specially designed "feed-saver" trough maintains a feed level that is easily accessible to the birds from billing feed out of the trough

VERSATILE Northco's Cage Feeder can be adapted to fit nearly any cage or cage arrangement even vertical or wall-row operations

IT'S A TOTAL SYSTEM

Owners of present Northco Slant-Back Systems are impressed with the way all components of the system work together to increase the efficiency of the total system.

Ben Morgan retires

(Continued from Page 1)

science degree in animal husbandry from West Virginia University.

As Penn State Extension animal scientist, Morgan played a major role in the development of the Pennsylvania Livestock and Allied Industries Association. He worked closely with this organization in the formation of the Keystone International Livestock Exposition, and served as the Exposition's manager from 1958-63 and later as chairman.

He was instrumental in the reorganization of the Pennsylvania Sheep and Wool Growers' Association, placing major emphasis on production improvement, orderly marketing, and promotion of the consumer's acceptance of quality lamb and wool.

Morgan is responsible for the Extension sheep program, including lamb and wool marketing. Pennsylvania cooperative wool pools annually market about 80 per cent of the Commonwealth's production.

Ben Morgan

Since 1962, the retiring animal scientist assisted in directing Extension's beef cattle breeding program, beef performance testing program, and graded feeder calf and cattle sales. Under his guidance, these sales have increased from four to 12 in the state.

A promotor of an integrated progeny testing program, professor Morgan was active in the establishment of the Pennsylvania Meat Animal Evaluation Center and served on its executive committee since its inception. Working with purebred beef cattle breeders, a bull testing program was developed and has been intregrated into the functions of the Center.

He represented Pennsylvania in the formation of the Beef Improvement Federation, a national organization designed to standardize beef performance testing programs throughout the United States and Canada.

As livestock specialist, he assisted in developing and conducting many in-depth sheep and beef cattle breeding, feeding, and management clinics and short courses.

In 1971 he was granted a sabbatical leave to investigate the beef and sheep industries in New Zealand and Australia. While on leave, he was invited to present a lecture at New Zealand's annual meeting of the Society of Animal Production. Information gathered during his leave was presented to over 110 livestock producer and industry meetings

He serves as advisor to numerous state, regional, and national livestock organizations. He also is author of many livestock publications, 4-H project books, and feature articles

In recognition of his outstanding contributions to the nation's livestock industry, Professor Morgan was named an Honorary Fellow of the American Society of Animal Science in 1976.

He was named Pennsylvania's Livestock Man of the Year in 1975 and received Gamma Sigma Delta society's Extension Award in 1974. While serving in West Virginia he received a Distinguished Service Award from the National Association of County Agricultural Agents.

The retiring professor is a member of the American Society of Animal Science, Extension Professors' Association, and Epsilon Sigma Phi and Gamma Sigma Delta societies.

He is married to the former Ruth McClintic, of Frankford, W. Va. They are the parents of two daughters.

Cheap wheels

There were 150,000 mopeds sold in the U.S. last year, and in three years the sales figures are expected to be in the millions. The cross between motorcycle and a bike will go a long way on very little gas, and you can buy one for about a tenth of what you'd pay for an automobile. But most moped enthusiasts say they ride the two-wheelers mostly for the fun of it. A group of 30 women in Walnut Creek, Cal., call themselves "The Moped Mamas" and meet once a week for group runs

Milk hearing set

HARRISBURG — The public hearing for the Southcentral Pennsylvania Milk Marketing Area, which was recessed May 23, 1978, will be reconvened at 10:00 a.m. on Wednesday, May 31, 1978, in Room B of the Farm Show Building, Cameron and Maclay Streets, here.

have a nice weekend...

Cattle

(Continued from Page 1)

graded cattle were recorded $2 to $3 higher, with mixed good and choice feeder steers commanding a price as high as $65 per hundredweight.

The weekly summary for Lancaster County this week, (ending Friday, May 26), shows that slaughter steers were progressively higher throughout the week and closing $2 to $3 higher. Slaughter heifers were steady to $1 higher; cows mostly steady, instances to $1 lower; bullocks steady to $1 lower; bulls $1 lower, instances $2 lower.

Feeder cattle in St. Louis were reported firm to $2 higher on Thursday. Feeder steers, choice, weighing 400 to 500 pounds, brought $67 to $69.50 per hundredweight. Oklahoma reporter 300-400 pound choice feeder steers commanding prices as high as $74.25. Choice feeder heifers, weighing 300 to 500 pounds, brought 58 to 60 dollars per hundredweight at major Midwest auctions.

Utility and commercial slaughter cows are continuing to bring prices upwards of $40 per hundredweight, with some going as high as $44.

Vealers, bulls, and bullocks, however, are lower compared to a week ago. Detailed market reports are inside.

The comparatively high prices being paid currently have caused a lot of talk and speculation among cattlemen and market observers. Among them is Penn State's Extension economist, H. Louis Moore. He observes:

"Hardly a day passes when I don't see at least one article predicting hamburger as an "endangered species" with a price rising to $2.00 per pound. The latest one by a custom cattle feeder in California justified $2.00 hamburger because there just aren't enough old cows around anymore.

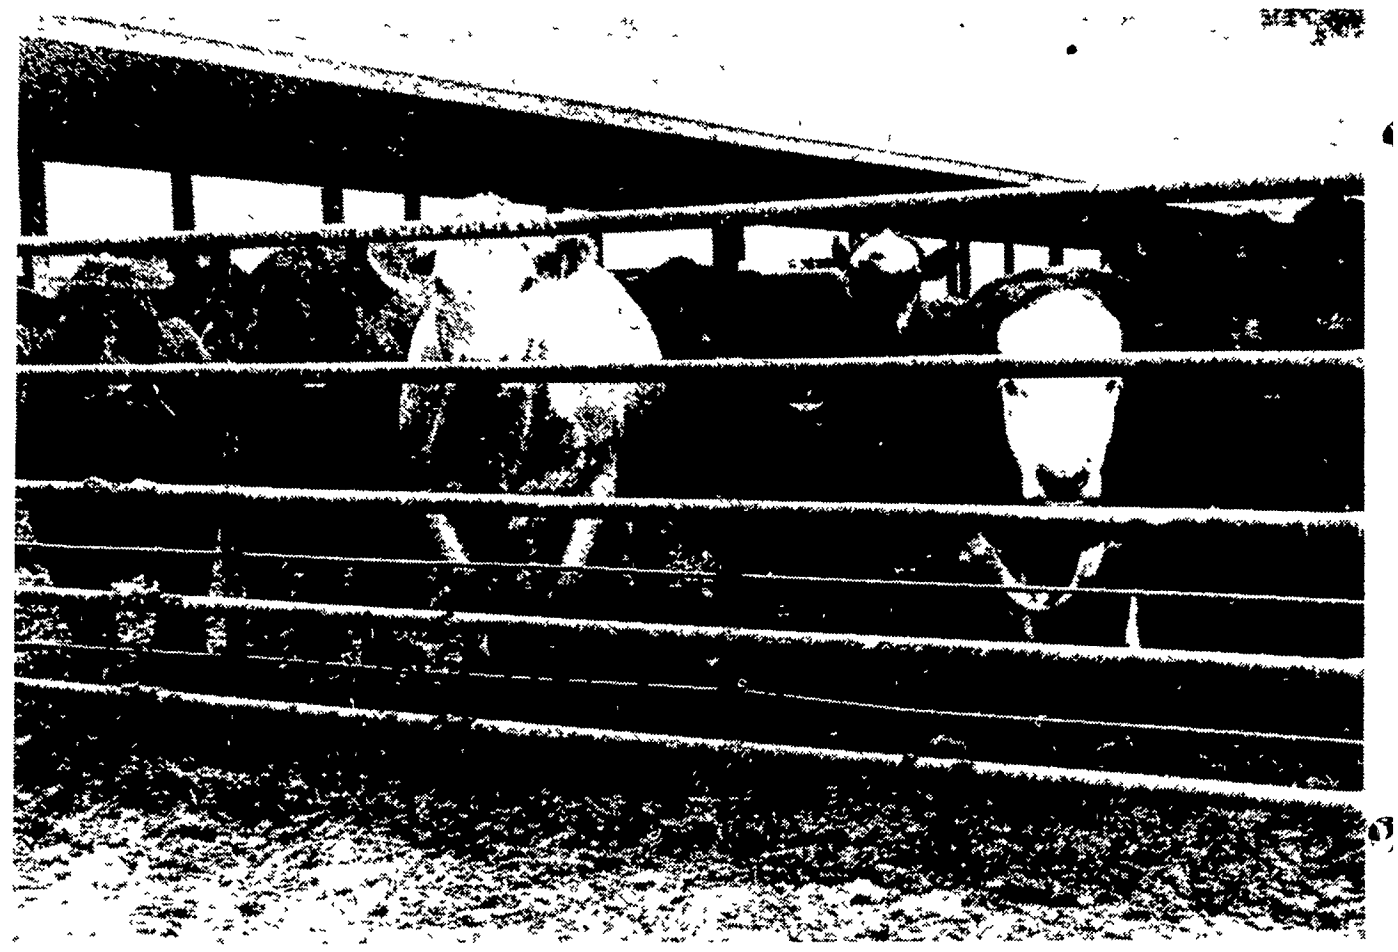
Before we get too carried away, let's calm down and take a look at what is happening. It is true that the slaughter of non-fed beef may drop 20 to 25 per cent below a year ago. This will put some strain on hamburger production from non-fed animals but we will still have imports totaling about 7 per cent of our total beef production. There will also be considerable substitution of meat from fed animals to make hamburger. For several months slow-moving chucks from fed beef have been moving into the hamburger trade. Consumers have a taste for hamburger and will continue to want this meat.

But $2.00 per pound hamburger – not in the near future for a number of reasons:

(1) the average price of all beef cuts in retail in February 1978 was $1.51 per pound. Choice grade beef averaged $1.38 for all of 1977. Hamburger averaged about $.85 for all of 1977, about 61 per cent of the price of all beef. In February hamburger had risen to $.93 per pound. If hamburger prices kept the same relationship to total beef prices and rose to $2.00 then the composite price of all beef would be around $3.00 per pound. Porterhouse steak would be in the range of $5.00 per pound. Starts to sound ridiculous, doesnt it?

Another factor is (2) substitution of meats. Since hamburger is the cheapest beef product, other beef cuts will be directed to hamburger in large quantity

(Turn to Page 48)



The best feeder cattle are commanding prices of around $70 per hundredweight. Prime and high choice slaughter cattle are "in style" at prices in the $60 to $64 price range.

Cattle auctions, such as this one at the Lancaster Stockyards, have been a bit more interesting lately since prices are up.

Feeder pigs affected by stress

Feeder pigs introduced to a new environment are affected by stress just like a human would be.

Care should be taken to make them feel as comfortable and as much at home as possible.

NEWARK, Del. – Feeder pigs that arrive at the farm are subject to the same kinds of stresses after travel as a person would be, says Delaware Extension livestock specialist Dr. Richard E. Fowler. They'll get off to a faster start if they're made comfortable in their new home.

One should give them a warm, dry pen – 75 degrees Fahrenheit is optimal. Drafts should be eliminated, at least in the sleeping area, as they can affect a young pig's performance.

The pen should be isolated from all other pigs on the farm. One can introduce the pigs to a clean, disinfected pen by applying phenol type or cresylic acid disinfectant to all surfaces.

One should limit numbers of pigs to 50 or less per pen. Twenty-five is a good number. At least four square feet should be allowed for 30 to 50 pound pigs, and five square feet for 50 to 80 pounders. Some research has shown that space can be cut to 3.5 square feet for lighter weight pigs. One should provide a separate hospital pen for sick pigs.

Stressed or sick pigs will drink water before they will consume much feed. Fowler suggests medicating their water for one week. One waterer should be allowed for 25 pigs. Water soluble sulfa and electrolytes or water soluble antibiotics and electrolytes can be used. A flavor enhancer such as Jello or Kool-Aid will increase water consumption.

One feeder space is allowed for every four pigs. If the feeders are covered, one should fasten the lids open for several days. Special formula feeds benefit the pigs for the first five days.

A special ration should contain 13 per cent protein, 17 per cent oats or barley, vitamins at two times the NRC levels, and higher levels of antibiotic (100-200 grams per ton). The effects of shipping stress and anemia can be reduced with the addition of two pounds of ferrous sulfate and one pound of copper sulfate per ton of feed.

One can gradually change to his regular feed, which should contain 16 per cent protein. A good way to make this change is to blend half regular feed and half special ration before changing over entirely to the regular feed. One can consult his veterinarian for the proper medication to use in regular feed.

A person should deworm the pigs when they arrive, or wait three weeks. A broad spectrum wormer containing levamisole HCL or dichlorovos should be used. If there is sickness, one should wait until it is over to deworm.

External parasites can be treated by using Malathion or another approved pesticide for lice and mange. One should spray when the temperature is above freezing and treat as often as necessary.

During the first week or two, a person should observe the pigs several times a day. Individual pigs can be treated upon the advice of your veterinarian for three consecutive days. Early treatment often prevents death.

Eight of the 10 top placing individuals in the Lancaster County horticulture contest were: (left to right) Tracy Wettig, Mike Kimes, Linda Rogers, Andy Ressler, Beth Miller, Kim Skethway, Tracey Rebman, and Chrissi Brubaker.

Horticulture student takes five top FFA honors

By JOANNE SPAHR

WILLOW STREET — Tammy Lefever, Strasburg, didn't like conventional school. So, when she heard about the horticulture program at Willow Street Vocational Technical School, she decided to give that a try and found she really liked it.

On Thursday evening she proved just how much she did enjoy her courses when she got up from her seat five times to garner several of the most prestigious honors handed out at the Hans Herr Chapter Future Farmers of America awards banquet. Miss Lefever's honors included star chapter farmer (horticulture), the Dekalb award, the County Banker's honor, the ornamental horticulture foundation award (horticulture), and the first place plaque for the county horticulture contest.

"These may be more awards than I've ever given to one student," noted FFA advisor James Kerr, who stated his policy is to spread out his awards as evenly as possible.

The 18-year-old Miss Lefever is a second year student at the vo-tech school and is employed at Host Farms as the greens keeper. After graduation, she will be employed at her present job on a full time basis. Miss Lefever, who hails from Lampeter Strasburg High School, is the daughter of Mr. and Mrs. Paul Lefever.

This year's star greenhand in horticulture was Beth Miller.

Kerr also handed out foundation awards to his horticulture students. Earning those honors were: Tom Summers, crop production; Linda Rogers, placement in agriculture production; and Andy Ressler, agri-business.

Kerr also proudly handed plaques to the top 10 students in the county horticulture contest. Out of 67 students participating in that contest,

(Turn to Page 47)

Tammy Lefever, a second year student at Willow Street Vo Tech, took home five of the most prestigious honors given out during the Hans Herr Chapter FFA honors banquet on Thursday evening.

Winners of floriculture foundation awards at Thursday evening's banquet included: (left to right) Pam Skethway, Krisy Kinsey, Kyra Sirbak, and Marvin Stanley.

YOU GET MORE HAY AND BETTER QUALITY HAY WITH THE MODEL 299 MOW/DITIONER

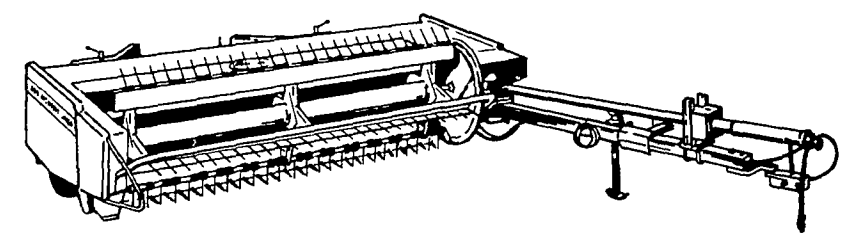
It does three jobs for you in a single pass — cuts a full 9 feet 3 inches, conditions and swaths or windrows — under just about any field condition.

The "Quick-Response" header flotation means less damage to guards and sickle on rough fields, and gives you more hay by maintaining a uniform stubble height.

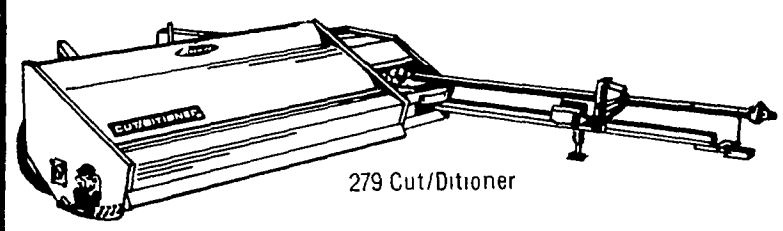
Not only are you saving time, you're making higher quality hay with minimum damage to the valuable, nutrient - loaded leaves. The "Spiral Press" conditioning rolls run lug-on-lug to intermittently flatten stiff plant stems and is gentle to tender leaves and short stems.

Maintenance is quick and simple, so you can spend more time in the field

Put all of these things together, and you'll see why Mow/Ditioners are making sense to more and more farmers



HAY HARVESTING THE CUT/DITIONER WAY



279 Cut/Ditioner

Avco New Idea gives you a choice of two hay-producing units that combine high-capacity, trouble-free operation with low maintenance and low initial investment.

CUT AND CONDITION INSTEAD OF CHOP OR SHRED. Both New Idea's 7-ft. 272 and 9-ft. 279 Cut/Ditioners are designed to cut evenly, condition gently and windrow or swath all types of hay or forage crops. They are not flail choppers or stalk shredders. With the Cut/Ditioners, you control knifetip speed from your tractor seat by simply matching PTO speed and ground travel speed to the crop condition.

FAST, NON-STOP HARVESTING. Farmers report that our 7-ft. 272 Cut/Ditioner actually does more work than a 9-ft. mower-conditioner, because the Cut/Ditioner is virtually plug-free.

Since less downtime means more production, just think how much more work you can do with either of our Cut/Ditioners ... especially the 9-ft. 279!

HARVEST THE KIND OF HAY LIVESTOCK PREFER. Cut/Ditioners provide uniform conditioning and mixing of plant butts and tops. That means you get a softer hay, the kind that livestock will choose instead of mower-conditioned hay if you give them a choice.

MAKE DOWNED, TANGLED HAY PART OF YOUR HARVEST. Because New Idea Cut/Ditioners won't plug or skip, they do a real job in down and tangled hay. In some conditions, Cut/Ditioners harvest 25% more than mower-conditioners, because the rotary knives of the Cut/Ditioners lift more of the stalk before cutting.

HARVEST HAY THAT DRIES FASTER. Cut/Ditioners produce fluffy windrows with greater air circulation so you're assured of drying rates that are equal to — and often faster than — other hay makers.

CUT/DITIONING LEADS TO FASTER REGROWTH. Tests show that the somewhat frayed stubble resulting from harvesting with New Idea Cut/Ditioners actually helps speed regrowth by reflecting sunlight, and thereby retaining more ground moisture than from the stubble remaining.

THE BELT DRIVE RAKE IS THE QUIET, SMOOTH WAY TO BUILD FLUFFY WINDROWS

Smoothly, quietly, it rakes an exceptionally clean 8-½ foot width with minimum leaf shattering and builds fluffy, uniform windrows The straight axle design, working with the spring suspension with friction brake, reduces basket bounce, even on rough terrain

Available with either front wheel or hitch jack. The front wheel acts as a gauge wheel and follows the ground contour closely for a cleaner job of raking and reduces tooth wear Further, the front wheel permits the use of a longer tongue for tighter turns. Hookup is a breeze you'll lift only the tongue, not the rake The straight-tongue mondel has a screw-type jack for easy parking and hitching. The jack folds up under the frame when rake is in operation.

Northeast's farm market prices mostly higher

NEW YORK, NY – Northeast farm market prices were mostly higher for the week ending May 19, reports the Agricultural Marketing Service of the U.S. Department of Agriculture. Egg prices were down, poultry prices ranged from generally unchanged to lower, while produce, livestock and meat products were generally higher. Milk production varied from steady to slightly heavier.

FLUID DAIRY PRODUCTS

Eastern milk production ranged from steady in the north to slightly heavier in Pennsylvania, Maryland and Virginia. Fluid supplies were fully adequate in New England but burdensome in Maryland and Virginia. Surplus diversions to manufacturing plants were excessive in Maryland and Pennsylvania, with clearances to Ohio and Southern outlets.

The demand for Class I milk was seldom better than fair.

Cottage cheese and yogurt sales were good.

Fluid cream supplies were mostly excessive of a fair, spot buying interest, and churning activity ranged from moderate to heavy.

Ice cream production and sales were unseasonably slow due to poor weather conditions

Sour cream and cream cheese movement was good

Eastern market administrators announced the April uniform (blend) prices as follows Order 1 - $10.09; Order 2 - $9.60; Order 4 - $10.54; Order 36 - $9.38 per hundredweight. April milk production ranged from a four per cent decline in Maryland to a six per cent increase in Vermont. Elsewhere, production was up five per cent in New York and Pennsylvania, and one per cent higher in Virginia, compared to April 1977.

FRUITS AND VEGETABLES

Northeast area fruit and vegetable trading showed a wide ranged from slow to active and prices were generally higher at shipping point.

Light supplies of Maine potatoes continued to move slowly and prices held about steady.

First of the season offerings of Romaine lettuce appeared at the New Jersey auctions.

Prices were higher for asparagus, lettuce, green onions and radishes, but were slightly lower on leeks and spinach. Field work was slowed considerably this week due to heavy percipitation.

The F.O.B. shipping point price of U.S. One round white potatoes from Maine was $1.75 to $2, per 50-pound sack.

At the Swedesboro auction, asparagus, in pyramid crates of 12 bunches, averaged $18 21 to $20.68, while at Vineland auction, they brought $17.50 to $22.

Other items at Vineland auction were big Boston lettuce in crates of 24 heads, selling for $3.75 to $7, while Romaine lettuce, in 1-1/9 bushel crates, went for $4 to $7. Leeks, 12 bunches, were priced $3.45 to $4.55. Green onions, 36 bunches, sold for $4.55 to $5.90 and radishes brought $3.20 to $5.50. Spinach in bushel baskets was lower in price, ranging from $6.50 to $12.50.

The fruit season in upper New York State was about complete with only light shipments remaining.

EGGS

New York egg prices declined on all sizes. Cartoned egg demand was generally fair at best. Increased buying interest was developing where retail features were planned. Supplies were fully adequate for most trade needs

Thursday's prices to retailers and sales to volume buyers of Consumer Grade A white eggs in cartons, delivered store door in New York City, brought 53 to 55 cents for large and 44 to 46 cents for mediums, both down two cents from last Thursday.

POULTRY

New York broiler-fryer buying interest was fairly active with early trading for next week at 44 to 45 cents on Plant Grade and 46 cents on U.S. Grade A. Offerings were adequate although processors were holding product for higher prices.

Thursday's broiler-fryer negotiated prices for immediate delivery, including multiple-drop shipments to New York City were: U.S. Grade A, 45 to 48 cents; Plant Grade 45 to 47 cents.

Delmarva ready-to-cook broiler-fryer movement was fair to good. Slaughter schedules were very heavy. Advance interest was good. Live supplies were fully adequate with weights well distributed in desired sizes.

Thursday's less-than-truckiot asking prices were 47 cents on Plant Grade and 48 cents on U.S. Grade A, unchanged, compared to previous week.

New York chicken parts buying interest was good on breasts with both processor offerings and floor stocks well cleared. Legs were ample for a light demand with inquiry improving.

Thursday's prices paid per pound, ice packed, delivered in pool trucklot and trucklot quantities were: breasts, 84 to 90 cents, mostly 85 to 86 cents; legs, 47 to 58 cents, mostly 49 cent.

The turkey market demand was fair with increased interest on bagged toms weighing over 20 pounds. Offering were lighter and barely adequate on hens and 20 to 22-pound toms. Some additional retail features were anticipated for next week.

Trading activity on carlot and trucklot young turkeys, U.S. Grade A, frozen, F.O.B. New York, were as follows: hens, 8 to 16 pounds, 61 cents; toms, 14 to 22 pounds, 60½ to 63½ cents.

LIVESTOCK AND MEAT PRODUCTS

Northeastern livestock and meat prices were generally higher. At Lancaster, Vintage and New Holland, Pennsylvania auctions and sixteen Upstate New York auctions, slaughter steers sold $1 to $2 higher. Utility cows were firm to $1 50 higher. Choice vealers ranged from steady to $7 higher in New York, while in Pennsylvania, they ranged from steady to $6 lower. Good and Choice boning type vealers were up 50 cents to $1, except late sales in Pennsylvania, which were down $10 to $15. Slaughter barrows and gilts increased $1.75 to $2 in Pennsylvania. At Omaha, slaughter steers closed $1.75 to $2.25 higher, and in some instances, $2.50 higher. Barrows and gilts were fully up $1.25.

Choice Two to Four slaughter steers, weighing 975 to 1350 pounds, varied from $56.25 to $59.35 in New York and Pennsylvania, while at Omaha they brought $57.25 to $58.50. Utility Two to Three cows went from $38.50 to $44, with a few going up to $45.50. Choice vealers, 150 to 300 pounds, sold from $75 to $90, with High-Choice and Prime grades, bringing $86 to $95. Good and Choice boning vealers, weighing 90 to 110 pounds, went from $65 to $74.50 in New York State, and from $40.50 to $55 in Pennsylvania. U.S. One to Three barrows and gilts 200 to 240 pounds, were priced $51.25 to $53 at Pennsylvania auction, and $51 to $51.25 at Omaha.

On the East Coast, carcass beef closed mostly $1.50 higher, while boneless cow beef ranged from steady to $1.50 higher. Prime carcass veal closed mostly $5 higher with Good and Choice boning veal steady to weak. Fresh pork loins finished generally steady.

Choice Three steer beef, 600 to 800 pounds, brought $92. Boneless cow beef, 90 per cent lean, sold at $108 to $110. Prime special fed veal, hide on, weighing 180 to 225 pounds, went from $155 to $160, while Good and Choice boning type veal, 34 pounds and down, was priced $94 and in limited late trade, $90 to $92. Fresh pork loins, 14 to 17 pounds, went for $99.

MAGNESIUM
DEFICIENCY

IS IT A PROBLEM ON YOUR FARM?

IT HAS BEEN ESTABLISHED THAT THERE ARE PERIODS IN WHICH AN ANIMAL'S REQUIREMENTS FOR MAGNESIUM MAY BE INCREASED BRIEFLY, THEY ARE

1) ADVANCED PREGNANCY – The intake must supply Magnesium for two animals
2) EARLY LACTATION – During this period a 2-day flow of milk will remove all of the Magnesium in the blood
3) HIGH NITROGEN LEVELS IN FORAGES AND HAY – This is caused by heavy nitrogen fertilization and is believed to be more pronounced where there is an imbalance in the phosphorus and calcium content of the plant

TO AID THE FEEDER IN COMBATTING THIS CONDITION OF MINERAL IMBALANCES, SEA BOARD OFFERS IT'S Mg14

Mg14 is a supplemented mineral feed containing 14% MAGNESIUM and all other major and minor mineral elements, salt and vitamins to efficiently balance the nutrition cattle obtain from the pasture

For more information concerning this valuable Mineral Supplement, and for all your Mineral and Ingredient needs, CONTACT YOUR LOCAL FEED DEALER.

Paul H. Herr, right, was honored for 20 years as a representative of American Breeders Service. Dan Rush presented the award.

Representatives honored by American Breeders Service included, from left, Darvin J. Yoder, Ira L. Boyer, and C. Robert Greider.

Herr honored for 20 yrs. service to ABS

YORK – District 047 of the American Breeders Service held its annual awards banquet Tuesday evening at Avalong Dairy Bar in York.

Honored for 20 years of service with the breeding firm was representative Paul H. Herr, Holtwood. Herr was also presented with a luggage set in recognition of his surpassing the 96,000 semen unit sales mark.

Also receiving service recognition at the meeting were Ira L. Boyer, York, for three years of service, C. Robert Greider, Berks County, for three years of service, and Darvin J. Yoder, Ephrata, with two years of service.

William Kepler, Middletown, Md., was honored for his work as a genetic mating service counselor with American Breeders. In addition to serving as a cattle breeding consultant, Kepler maintains his own dairy herd.

Other service representatives cited at the banquet included: Maurice C. Stump, 18 years; Kenneth W. Eyler, 15 years; Alvin C. Crispin, 12 years; Paul M. Martin, 11 years; Dale M. Rothermel, eight years; Lynn G. Gardner, four years; James N. Charles, four years; Allan Pickett, two years; and David W. Churchill, Jack M. Kling, and Allen R. Rohrbaugh, under two years.

Presenting the recognition certificates and gifts was Dan Rush, district sales manager.

Regional sales manager, Fred Buschner, Massachusetts, spoke briefly on current programs and future goals of the company. Working with the National Holstein Association, American Breeders Service is seeking better methods of daughter identification for improved sire proof information. Monitoring programs on daughters of the firm's sires are being set up in test centers across the nation, and local associated herd meetings are being scheduled to familiarize dairymen with the program purposes.

District 047, which covers southcentral Pennsylvania, most counties of Maryland and southern New Jersey, has been named the top district in the Northeast region.

Pork producers plan picnic

YORK – The wooded picnic area at Elickers' Grove will again come alive with the delicious smell of charcoal grilled juicy pork on June 10 when the York County Pork Producers Association hosts their annual pork barbecue.

Serving will begin at 4 p.m. and continue through 7 p.m. Tickets must be purchased in advance and are priced at $4.50 for adults and $2 for children under 12.

A York area musical group will provide entertainment throughout the evening.

Agri-business firms as well as the following association directors, can be contacted for barbecue tickets: Arlie Cornbower, New Freedom; Preston Bankert, Red Lion; Richard Luckenbaugh, Spring Grove; Roger Bankert, Hanover; Joel Stern, East Berlin; Clarence Hulshart, Stewartstown; Ronald Trostle, Red Lion; Bill Shirey, York; William Strausser, Felton; and Tony Dobrosky, York County Extension Service.

Forced unionism stalled in Congress

WASHINGTON, D.C. – The abrupt Senate decision to delay a cloture vote on the so-called labor law "reform" bill shows "the bill's big labor supporters don't have the votes to stop the filibuster and they know it," Reed Larson, president of the National Right to Work Committee declared last week.

Senate Majority Leader Robert Byrd of West Virginia announced May 18 that there would be no cloture vote on S. 2467, the mislabled law "reform" bill now before the Senate, until after the Memorial Day recess.

"If the bill's supporters had the votes," Larson said, "they would try for cloture. Their announcement to delay any vote is an open admission of their basic weakness.

"It also confirms that opponents of the bill are speaking for the majority of the American people who oppose a bill which would force hundreds of thousands of workers into unwanted unions.

"The next move," said Committee president Larson, "is up to the supporters of the phony labor law 'reform' bill. They can either continue to waste America's time by prolonging the filibuster or abandon S. 2467 as a piece of unwanted and unwarranted legislation and get about the real business of coping with the serious problems of inflation, energy and unemployment."

The Senate, buried under a deluge of public protest against the so-called labor law "reform" bill (S. 2467) took up the controversial legislation at noon, on May 16 and was quickly caught up in what promises to be one of the longest filibusters in over a decade.

Larson said the opponents are well-organized "and prepared to fight on behalf of America's workers for as long as necessary to defeat this compulsory unionism legislation."

Larson said, "The supporters of the filibuster know that even though they don't have a majority of the senators with them, they do have a majority of the American people, and are therefore going to stand fast against this sell-out to union officials.

"So there's no reason for Majority Leader (Robert) Byrd (D-WV) to drag it out.

"President Carter and the union officials aren't going to be able to force this unpopular measure down the public's throat no matter how long they tie up the Senate."

Despite the public opposition to the bill, which would force workers to join unions against their will, organized labor's friends in the Senate have vowed to "keep at it until we get cloture, no matter how long it takes."

President Carter, at a White House "pep rally" for union officials late last week promised them they'll "have a strong partner in the White House." Carter indicated that the prolonged battle over the "reform" bill could be allowed to drag on because, he said, last year's "overwhelming problem" with inflation has eased.

In 1976, the Carter-Mondale ticket received $11 million in reported in-kind contributions from organized labor (considered only a fraction of the total support received from unions). In December of 1977, Vice President Mondale, speaking at the AFL-CIO's 12th convention, promised the gathered union officials "to fulfill the trust and faith you have put in us" by making the so-called "reform" bill one of the Administration's top legislative priorities.

Now, sources on Capitol Hill indicate that the President has promised union officials to personally call southern senators opposing the bill and pressure them to switch their position.

BILL FAR FROM MODERATE

"It's a terrible indictment of the Administration and certain union-controlled senators," Committe president Larson said, "for them to allow this union power grab to take up their time and the country's time.

"While on the one hand, the bill's backers are trying to peddle it as 'moderate' legislation, on the other hand, they're pulling out all stops to force it through.

"Their 'no-holds-barred' approach to the bill's passage lends credence to the statement Senator Harrison Williams (D-N.J.) made when he introduced the legislation last July. Williams boasted that, 'this is the most sweeping revision of national labor policy since the passage of the Landrum-Griffin Act 17 years ago.'

"And the worst part," Larson concluded, "it's a revision that gives vast new powers to union bosses at the expense of rank and file workers."

The National Right to Work Committee is a 1.25 million member citizens' lobby that opposes compulsory unionism. It is widely credited with leading the opposition to the "reform" bill.

Since late December, the Committee has run over 300 newspaper ads and mailed in excess of 10 million letters to members and prospective members. The Committee's efforts have resulted in over 4 million cards and letters being sent to U.S. Senators by constituents opposing the bill.

Broilers up

HARRISBURG -- Placements of broiler chicks in the Commonwealth during the week ending May 13, 1978, were up six per cent from the same week a year ago, according to the Pennsylvania Crop Reporting Service.

The placements were at 2,037,000, three per cent below the previous week. Average placements during the past 10 weeks were nine per cent above a year earlier.

Placements of broiler chicks in the 21 poultry-producing states were 76,144,000, one per cent below the previous week but seven per cent more than the same week a year earlier.

Average placements in the 21 poultry-producing states during the past 10 weeks were four per cent above a year earlier.

The number of broiler-fryers slaughtered in Pennsylvania in the federal inspection week ending May 3 was 1,748,000 with an average weight of 3.86 pounds.

No rabies reported

HARRISBURG – The Pennsylvania Department of Agriculture's Bureau of Animal Industry reports no rabies cases have been diagnosed positive between January 1 and April 30, 1978.

The bureau reports that 16 rabies cases were diagnosed positive from July 1, 1977 to April 30, 1978. Twelve cases involved bats, with the remaining four attributed to two skunks, one dog, and one cat.

FREE NITROGEN OUT OF THE AIR

Enough to make a good crop by applying **Agrispon** soil innoculants after planting It more than pays for itself by the phosphores and potash it releases and the big improvement of the soil texture. The nitrogen is free, we can spray on it Now is a good time after planting Same with **SOIL CONDITIONER** which improves crops tremendously just by breaking hard pan and making soil life possible **Agrispon** supplies the soil life, they blend well together and cost very little per acre.

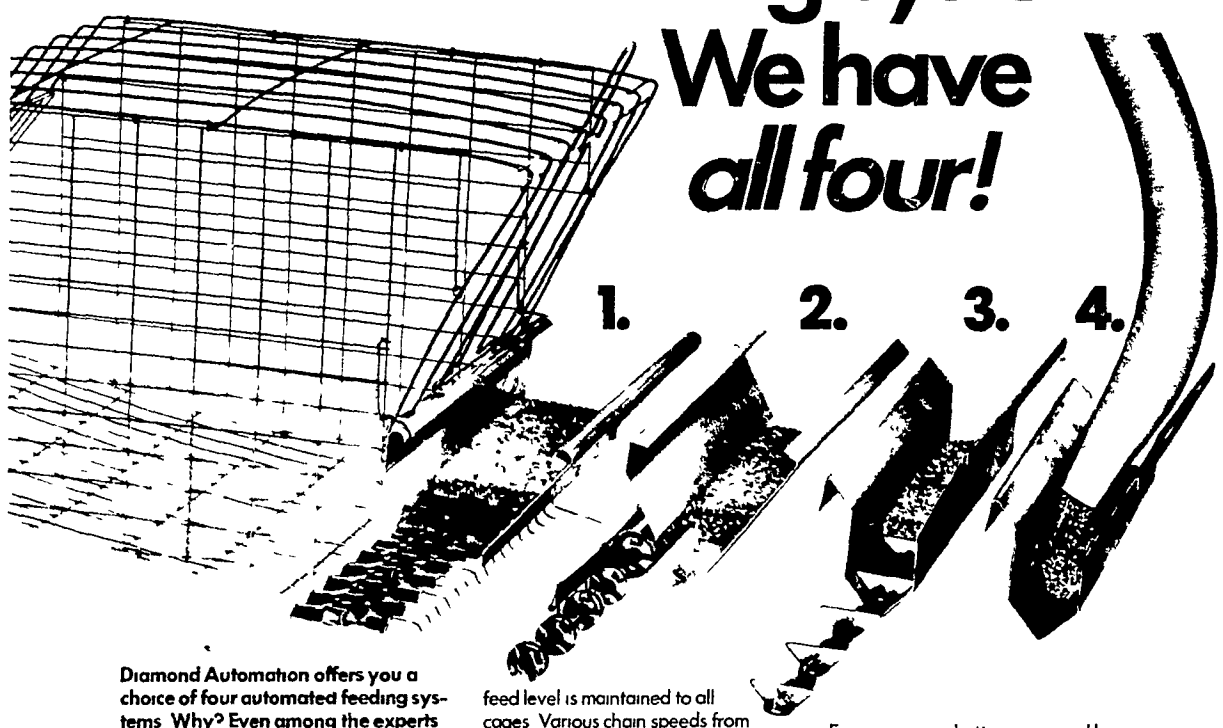
THE SYSTEM ▶ DIAMOND AUTOMATION

Looking for the *one* best feeding system? We have *all four!*



Diamond Automation offers you a choice of four automated feeding systems Why? Even among the experts not everyone agrees on which system is "best "

With the cost of feed running about 60% of your total production cost, more than ever, proper feeding is critical It can make you—or break you One key to proper feeding is proper distribution

That s one big advantage of dealing with Diamond Automation We don t have to try to *sell you* on one particular system because it s the only one we have *You* pick the system that best fills your feed distribution needs *And you can bank on it*

Choose from

1 New Flat Chain System Feed is carried on top of the chain links You control the depth of feed with ease and accuracy There s less billing-out Optimum feed level is maintained to all cages Various chain speeds from 20 to 60 ft per minute are available

2 New Link Chain System Small individual portions of fresh feed are carried through a covered channel Birds can t pick at feed as it passes Each time the system starts, equal portions of fresh feed are distributed throughout the length of the trough Less waste Same formula from beginning to end

3 The Old, Reliable F-80 Deep "V" System. Keeps an even supply of fresh feed in front of all birds, including those farthest from the feed supply Even debeaked birds eat freely and safely from the entire width of the trough Deep V design really cuts down on billing-out

4. Exclusive Feedsaver" System The feed mix you buy is the mix the birds get Energy-saving, battery powered hoppers deliver a fresh, balanced ration to each bird Automatically compensates for differences in birds feeding habits to eliminate feed build-up and spillage Reduces overfeeding and billing-out Provides meaningful savings in electric and feed costs

Fully compatible with any of our cage systems And, if you haven t heard, we've added seven new cage systems We call them our Egg Maker Series 2 and 3-high, floor supported or roof suspended, 4 high layer reverse cage, and single tier starter-grower floor supported or suspended

If you'd like to get together and talk systems—cages or automated feeding—just let us know

Back-to-the-land movement is dead

By JERRY WEBB
University of Delaware
Extension Service

NEWARK – That back-to-the-land movement that seemed to be gaining momentum during the early 70's is dead. The latest figures, compiled by the Bureau of Census, indicate that folks are leaving the farm at a faster rate now than at any time in the past 15 years.

There was a time when demographers felt the migration from American farms might be reversing. The rate of loss had slowed dramatically and showed signs of turning the other way.

But then something happened, the experts don't know quite what, that speeded migration again. In the early 70's the number of people leaving farms dipped to only 1.2 per cent a year. Then in 1974 it jumped to 5.8 per cent and has stayed there ever since. A small share of that change can be accounted for in a census procedural change, but that still leaves about half a million people who left American farms between 1975 and 1976 for reasons unknown to the census takers.

One can only speculate about why people are rushing to get away from the land. Perhaps it's the economic trend of the past couple of years. Maybe it's the high price of getting started in farming. Perhaps it's the lure of better opportunities somewhere else. The fact remains that a trend that started 60 years ago is continuing. In 1916, the peak year of U.S. farm population, one person in three lived on a farm. But today only one person in 26 lives on a farm and that's less than four per cent of the population.

If farmers are getting fewer, they are also getting younger. And although it's still not exactly a young man's game, a trend that started at least a half century ago has rather suddenly been reversed. The Bureau of Census says that in 1910 the average age of farm operators was 43½ years, but by 1970 it was slightly more than 53 years Since then farmers have been getting younger. In 1975 the average age of farmers dipped to 50.4 years – a youthful net of almost three years since 1970.

Perhaps more significantly the number of farmers under 35 years rose from 265,000 to 358,000 and that's a gain of 35 per cent. At the same time, the number of farmers over 60 decreased 23 per cent.

So farmers are getting fewer and younger. And that's happening at a fairly rapid pace. Looking down the road a few decades, it's not too difficult to predict that America's farms will be operated by a lot fewer individuals who will be younger and who will handle much larger operatons. Accompanying that trend will also be a demand for tremendous amounts of capital.

Farmers are going through an economic wringer right now that may discourage many of them. The younger ones seem to be particularly vulnerable. Maybe this will slow the youth movement in agriculture but it's doubtful that it will be any more than temporary. Young men who are growing up on the farm seem to be seeing more opportunities in agriculture than at any time in many years. The hard knocks that some of them are getting right now aren't going to hold them down too long.

In so many situations young farmers are following in the footsteps of their dads, taking up where their fathers leave off in an expanding farm enterprise. They're heavily invested and steadfastly committed to agriculture. They have always been farmers, all of their capital is tied up in farming and all of their skills revolve around farming. If it's economically feasible, most of them plan to stay in farming.

U.S News and World Report says farmland has been the best hedge against inflation. Comparing a variety of investments including common stocks, savings accounts, corporate bonds, and investments in urban real estate, farmland comes out way ahead. The report indicates that $10,000 invested 10 years ago in farmland is now worth $15,570. That's figured in 1967 dollars. During this same time, that amount of money invested in a corporate bond would be worth only $10,420 and in common stocks only $7,070.

Looking ahead another decade, there's no reason to believe that this same situation won't repeat itself. So don't be surprised to find the price of farmland continually increasing. Economic hard times in agriculture aren't doing much to dim the fires of enthusiasm. Although land isn't selling quite as rapidly, it also isn't selling much cheaper. The old adage about when is the best time to buy farmland seems to continue to be true – the time to buy farmland is now, for it will probably never be this inexpensive again.

Layering is cheap way to propogate

NEWARK, Del. – How would you like to add some more azaleas, rhododendrons, hollies or other broadleaf evergreens to your garden without the expense of buying new plants? There's an easy way to do this, says University of Delaware Extension horticulturist Dr. Charles Dunham - just layer existing plants.

According to Dunham, layering is one of the most successful methods of plant propagation a home gardener can use. The process is also extremely simple. Basically it involves bending down a branch from the parent plant and burying this in the ground until it forms roots.

Layering works well for a large number of plants. In addition to broadleaf evergreens, you can layer flowering shrubs such as forsythia, weigela, spirea, and many viburnums. Herbaceous perennials like phlox, bleeding heart, pinks, and many others can also be layered, rather than propagating them by cuttings or division.

This first step in layering a plant is to find a stem or branch that can be bent down to the ground. Sometimes it is possible to notch stubborn branches at the point of the bend to make them more flexible.

Bend the branch so that current growth or year-old wood near the tip touches the ground. Mark the spot on the soil where it touches.

Next, work some extra sand and peat moss into the ground at this point and scoop out a small hole about four inches deep.

Now bend the branch down and cut partly through the top side, using a slanting cut about a third or half way through the stem at the point where the roots of the new plant will form

Give the stem a half twist to bring the tip of the branch upright Then, using a small piece of heavy wire bent like a staple, pin the branch in the hole and cover it with the sand and peat mixture, being careful to leave the tip exposed. It may help to use a stone or brick to hold the branch in place The tip can be tied in an upright position to a small stake if desired. This growing point will form the top of your new plant

All the plants mentioned above can be layered when their new Spring growth hardens, which will be in mid to late June. The layers should form roots by fall. Herbaceous plants which result from layering can be cut from the parent plant and set out in the early Fall Woody plants are probably best left until Spring when they can be cut off and moved to their new location.

Wool pool set for June 15

CARLISLE – The Cumberland Cooperative Wool Growers will hold their wool pool on June 15, from 7 a.m. to 3 p.m at the Carlisle Fairgrounds, off Rt 34 in Carlisle

Producers from nearby counties are welcome to bring their wool There are no dues of membership fees Wool will be graded and weighed in the pooler's presence

Penn State livestock specialists will conduct wool grading demonstrations as part of the day's activities. Also, a bulletin board will be provided for anyone to post their notices of items they have for sale Rams, ewes, or sheep equipment may be brought along and sold from the truck

All fleeces must be tied, using only paper fleece twine. The wool must be free of excessive moisture

4-H horse show held

BRICKERVILLE – The Boots and Saddles 4-H Club held its 11th annual open horse show recently at the Lower Hopewell Horse Center, near Brickerville, Pa A total of 26 classes were held.

Adult champion rider of the show was Dee Dee Rice riding her horse Miss Night Dude Reserve champion was Jim Glick on his mount, Tri Miss Poco

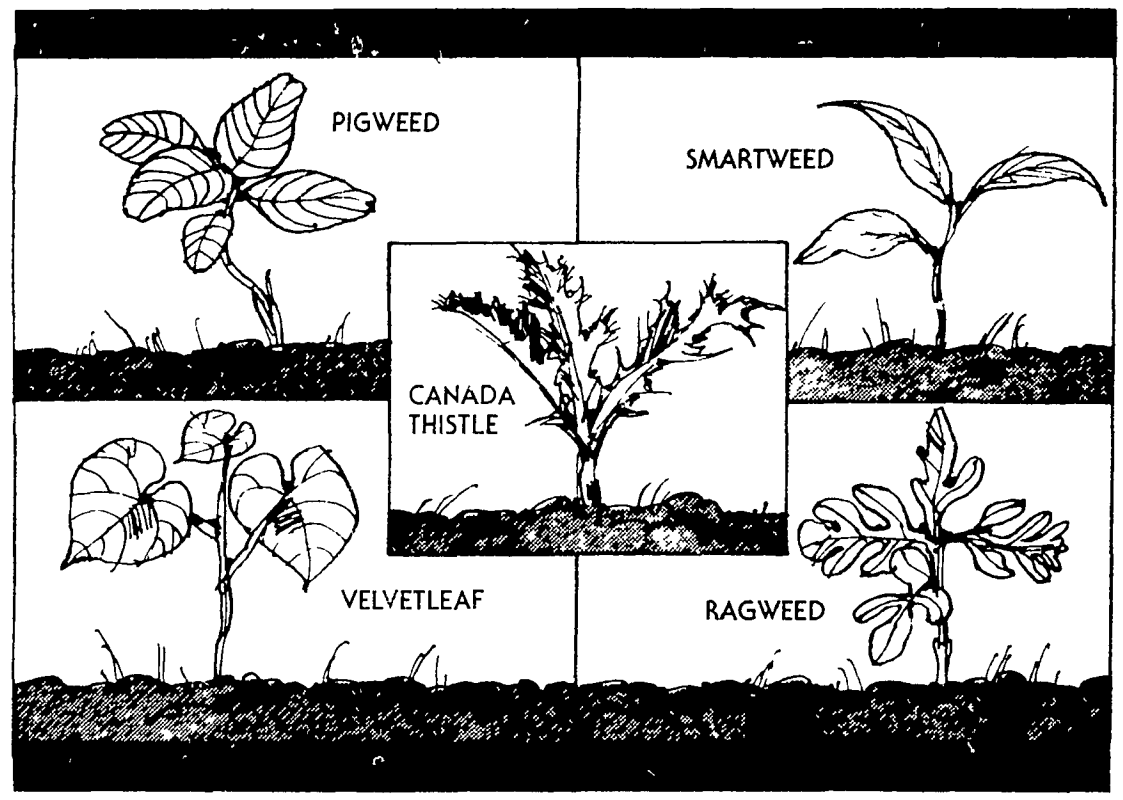
The Children's championship went to Monty Stetzer, who rode Pallida Wendy Weatheral riding Rocket Bar Forecast was named reserve champion

Jay Hughes was named racing champion His horse was Tolans Leo Sugar. Reserve champion was Ernie Rungie riding Diamond G. Cody.

ROHRER'S ARE DISTRIBUTORS FOR BANVEL

For post-emergence weed control on corn...

Banvel® herbicide...



...alone or tank-mixed with 2,4-D (depending on your weed problem):

...to control tough, late-germinating broadleaf weeds,

...to cover misses of pre-emergence herbicide application,

...to get control where weather or other factors make earlier application impossible,

...to make sure that late weeds cannot mature to become the nursery for next year's weed crop.

Ask us for application details about Banvel herbicide...from Velsicol.

Note: Before using any pesticide, read the label.

• Hamburger cancer study protested

CHICAGO – Both the American Farm Bureau and the National Livestock and Meat Board have leveled criticism at a study which claims hamburgers prepared at certain temperatures may cause cancer. In separate statements issued here last week, both organizations charged that the study drew its conclusions from unsubstantiated and incomplete data.

Dr. Barry Commoner, director of the Center for the Biology of Natural Systems, Washington University, St. Louis, Mo., released the controversial study to the press last week.

American Farm Bureau's president Allan Grant accuses Commoner of taking a "cheap shot" at the beef industry with his "hamburger cancer scare news release," and claims it was designed to raise research money."

Grant said the news release was premature and unwarranted, based on the flimsy preliminary findings by St. Louis scientists.

"There does not appear to be evidence that consumption of hamburger – regardless of the method it is cooked – has caused an increase in cancer in humans," Grant said in a letter to Dr. Commoner requesting documentation of the research that led to the news release. "In fact, statistics on hamburger consumption and the incidence of stomach cancer in humans support just the opposite point of view."

The paper on which the news release was based was presented by Dr. Commoner at the annual meeting of the American Society of Microbiologists in Las Vegas. Commoner is a well-known consumer advocate

Grant said the hamburger cancer scare tactic obviously was a ploy to attract additional research funding for Dr. Commoner's group, a fact readily acknowledged in a Las Vegas news conference by one of Dr. Commoner's associates, Dr. Piero Dolara.

The AFBF president called the whole episode irresponsible and the sort of thing that could do "irreparable harm to the beef industry."

Despite widespread publicity giving this impression, Commoner's research does not establish a hamburger-cancer link, according to David H. Stroud, president of the National Livestock and Meat Board.

Stroud observed that incidence of cancer of all types – except lung cancer – have either been decreasing or showing little change over the past 25 years, according to 1978 data from the American Cancer Society. During this same period there has been a dramatic increase in beef and hamburger consumption.

The study showed that, in certain instances, frying hamburgers to well-done temperatures could produce substances shown to cause "mutagens" or genetic changes in bacteria. Stroud noted that the research paper itself acknowledged that these mutagens have yet to be examined or further tested to determine if they may be potential cancer-causing agents.

After analyzing the full research paper with other industry experts, Stroud stated that data linking hamburger frying to cancer were: "...presumptive, conjectural and, at the moment, merely part of an interesting hypothesis."

"The study itself was apparently limited to testing hamburger frying using only certain types of electrical appliances," said Stroud.

In a letter to Dr. Commoner, Stroud said, "Our people and probably others in the industry should visit with you as soon as possible in regard to these interpretations which we find unpersuasive."

The Meat Board also was critical of the manner in which the study was released prior to the presentation of the paper at the American Society for Microbiology convention in Las Vegas this week. Stroud said the study was "Announced and distributed with news releases and hoopla as though it were a breakthrough, and smacks more of a promotion campaign than a scientific paper."

Performance ram sale nears

HARRISBURG – Pennsylvania Agriculture Secretary Kent D. Shelhamer reminded farmers that the state's Second Performance Tested Ram Sale will be held June 3, at the Agriculture Department's Meat Animal Evaluation Center in University Park at 2 p.m.

Shelhamer said that careful selection of a new stud ram is a very important part of overall flock management. "In fact," he said, "it is probably the most important single factor when determining what will happen to the genetic potential of a flock.

"The number one goal of the sheep industry must be to increase the genetic potential of sheep to produce. The genetic potential sets the upper limits which can be obtained from feeding and management."

According to Shelhamer, approximately 87 per cent of the genetic make-up of a lamb comes from the last three generations of lambs used. The traits of most concerns in both commercial and purebred sheep production but be those of the most economic importance.

"The importance of growth is obvious," the Secretary said. "Increased growth rates mean a shorter feeding period, because sheep gaining weight faster normally convert feed more efficiently.

"However, we also must be concerned about the composition of this growth. Seventy-five to eight-five per cent of the differences observed in the retail yield of lamb carcasses are due to differences in fat trim. It is important to know if the gain is in the form of fat or muscle."

All rams selling in Pennsylvania's Second Performance Tested Ram Sale will be ultrasonically scanned for fat thickness and loin eye area to give the buyer an idea as to composition of weight gain and how one ram compares to another in this category. Individual performance records will be available on all rams in this sale.

"Too many people evaluate the value of a ram by his cost, pedigree, or show winnings rather than his performance," Shelhamer said. "The Pennsylvania sheep industry must concentrate its efforts on more efficient production of a high quality product."

The Second Performance Tested Ram Sale is sponsored by the Pennsylvania Department of Agriculture in cooperation with the Penn State and the Pennsylvania Sheep and Wool Growers Association.

Red meat down

HARRISBURG – Red meat production in Pennsylvania during April 1978 totaled 84.3 million pounds, down two per cent from a year earlier according to the Pennsylvania Crop Reporting Service.

Cattle slaughter at 76,000 head was down eight per cent from a year earlier; sheep and lamb slaughter at 9,100 head were down 32 per cent. Calf slaughter at 29,700 head was up three per cent and hog slaughter at 230,900 head was up four per cent.

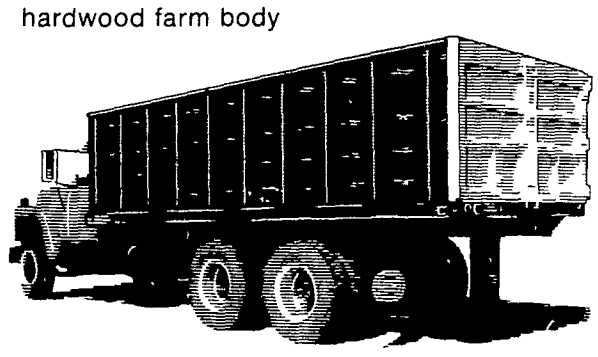
Commercial red meat production for the United States in April 1978 totaled 3.1 billion pounds, down four per cent from April 1977. Beef production was down four per cent, veal production down 15 per cent, pork production down two per cent, and lamb and mutton production declined 19 per cent.

Livestock & Grain Bodies

Bigger Than Ever, Better Than Ever

Precision engineered roll formed 52" high steel sides provide greater capacity at less cost.

We've built rugged truck bodies for over 50 years and today we're continuing that tradition That's the reason you can't make a better investment than an Omaha Standard steel or hardwood farm body



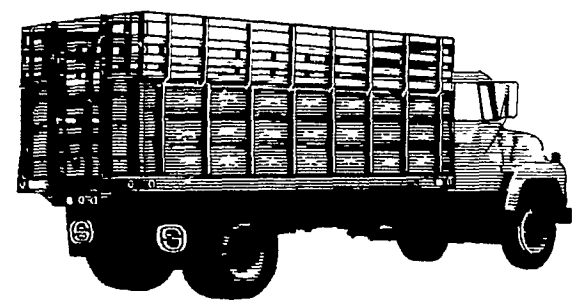
■ One-piece roll formed steel sides with built in tarp rail Available in 28", 40" and 52" extra-capacity heights all with maximum corrugation for maximum strength

■ 40" and 48' hardwood sides also available the truck body Omaha Standard built its reputation on

■ The toughest platform in the business – laminated wood, smooth steel or tread plate

■ Easy-conversion hardwood upper racks greater flex and life than steel fold down racks

■ A full line of rugged gates all engineered to make your job easier



Omaha Standard Hoists

■ Seven precision-engineered scissor hoists from 4 to 34 tons for bodies 8' to 24'

Olympic Series twin telescopic hoists with greater torsional stability for bodies 16' to 26' and 15 to 43 ton capacity

Omaha Standard bodies and hoists time-tested on thousands of farms throughout the United States and Canada

Look to Omaha Standard for the best Our equipment takes all the punishment you can dish out and comes back for more year after year We stake our reputation on it

We've been a part of successful farming and ranching for over 50 years.

Ed Compton, left, owner of Compton's Log Cabin Restaurant in Audubon, N.J. and Breezy Hill Acres Charolais Farm at Woodstown, N.J., shows off his herd sire, JKM Polled Prince, to Dave Seamans, livestock consultant from State College. Prince will be the featured sire in the first Investors' Opportunity Charolais Beef Cattle Sale, to be held at the Carlisle Livestock Market on June 3, beginning at noon. Prince is a 100 per cent certified meat sire as tested by the Rockview testing facility at Penn State University and PRI (Performance Registry International).

These Polled Charolais bred heifers from Silver Wings Farm, Gettysburg, will be offered for sale along with performance tested bulls, show bulls, and proven cows and calves.

Charolais breeding stock sale scheduled next week at Carlisle

CARLISLE – A group of Eastern Charolais breeders has chosen the Carlisle Livestock Auction Market, here, as the site for their first breeding stock sale. Dubbed the "Investors' Opportunity Sale," it will be held next Saturday, June 3, beginning at noon.

The Carlisle site was chosen because of its central location for the group, which represents Pennsylvania, New Jersey, and Ohio. Carlisle is also easily accessible through major roads such as the Pennsylvania Turnpike and Interstate 81. In addition, sales organizers believe that Carlisle is in a good beef cattle marketing area and that the Carlisle Livestock Auction Market is an excellent sales facility.

The emphasis of the sale will be on the performance tested and proven bulls and females. Two PRI (Performance Registry International) certified meat sires will be offered; one polled and one of French bloodlines. Three proven polled 2-year old bulls and several yearling polled herd sire prospects of show quality will be offered along with cows with calves, brood cows, and heifers. "Some excellent quality 4-H and FFA project heifers and steers will also go through the show ring," says David Seamans of State College, one of the coordinators of the sale.

The consignors include Silverwing Farm, Gettysburg; Gates Farms, Warriors Mark; Greenfield Farm, Landenburg; Veres Champion Farms and Marybrook Farm from Ohio, and Bethel Mill Farm and Breezy Hill Acres Farm from New Jersey.

The sale is being organized by technical livestock consultants David Seamans and Lowell Wilson of State College. Both will be available at the time of the sale to assist buyers with their selections.

The cattle will be available for viewing on Friday afternoon and Saturday morning. Lunch will be served at the sale barn both Friday and Saturday.

"Anyone who is interested in Charolais cattle and their growth and efficient meat genetics shouldn't miss this event," says Seamans.

Deadline extended for comments on milk order changes

NEW YORK, N.Y. – Dairy farmers and other interested persons this week received additional time, until June 11, to file exceptions to a U.S. Department of Agriculture (USDA) recommended decision to amend the Middle Atlantic federal milk marketing order.

Herbert L. Forest, dairy official with USDA's Agricultural Marketing Service, said the request for extending the comment deadline to June 11 came from a group of cooperatives.

Under the USDA recommended decision, the current methods of pricing Class 1 – or fluid use – milk would be continued. The decision denied a proposal for a bracketed pricing system and proposals to lower the Class 1 differential from its present $2.78.

The deadline to file exceptions to the recommended decision to amend the Eastern Ohio-Western Pennsylvania federal milk marketing order has also been extended to May 31.

Frost noted that the request for extending this comment deadline came from a group of handlers.

The USDA recommended decision for this milk marketing order includes proposed changes in payment procedures and pooling requirements. It also recommended adding presently unregulated areas in Ohio counties of Ashland, Lorain, and Medina to the orders's marketing area.

Cattle

(Continued from Page 36)

when hamburger prices move to the same level as the other beef cuts. Chucks are already being converted to hamburger because they are next lowest priced item compared to hamburger. If hamburger goes to $2.00 we will have rump roast and round steak converted to hamburger or the price of these items will go through the roof, too.

Consider also (3) consumer substitution. As hamburger prices rise, consumers will substitute other meats such as pork and poultry. At some price level, perhaps $1.00 to $1.19 per pound for hamburger, the retailers will begin to freely substitute soybean protein for a portion of the hamburger. At higher prices there will be more soybean product and less beef. Substitution will occur so freely that the price will not even come close to $2 per pound. Remember the scare year of 1973? It looked like meat would soon be rationed but the highest price of hamburger moved on a monthly basis was $1.10 in February 1974. Even at that price, hamburger helper and blend-o-beef soybean products were heavily promoted.

It's nice to dream but $2.00 hamburger isn't in the cards in the next five years unless we begin to see double digit rates of inflation in the general economy.

TM'S ORTHO CHEVRON AND CHEVRON DESIGN – REG U.S. PAT OFF

Top award winners from the Hans Herr FFA chapter included (left to right) Tom Summers, Donna Sheaffer, Deborah Wright, and Brenda Williams.

Horticulture student

(Continued from Page 38)

the top 10 hailed from Willow Street Vo-Tech, an honor the school has won for two consecutive years.

First place in that contest went to Tammy Lefever; second, Tracy Wettig; third, Andy Ressler; fourth, Kim Skethway; fifth, Beth Miller; sixth, Mike Kimes; seventh, Tim Wilk; eighth, Tracey Rebman; ninth, Linda Rogers; and tenth, Chrissi Brubaker.

Kerr also noted two outstanding candy salesmen from the chapter. Kim Skethway and Sharon Reynolds sold well into and over the $200 bracket.

Miss Cindy Murphy, floriculture instructor and Hans Herr FFA advisor, bestowed honors on her students, as well, on Thursday evening.

Earning the public speaking award from the chapter was Pam Skethway. Miss Skethway also garnered the crop production foundation award. A first year member, Miss Skethway owns her own greenhouse.

Other foundation honors went to Brenda Williams, placement in agriculture production and Kyra Sirbak, placement in agri-business.

From the floriculture class, this year's outstanding greenhand was Deborah Wright and the star chapter farmer was Krisy Kinsey. The ornamental horticulture award (floriculture), which is given to the outstanding student in floriculture, was bestowed to Donna Sheaffer.

The second of two individuals winning the County Bankers award, which is given to an outstanding student in scholarship, leadership, and general ability, was Marvin Stanley.

Other special honors handed out by the Hans Herr Chapter were certificates of appreciation and honorary Chapter Farmer degrees. These honors are handed out to individuals who have given special service to the organization over the year.

Earning honorary chapter farmer degrees were: Mrs. Linda Kline, substitute teacher; John Riddell, Jr., principal at Willow Street Vo-Tech; Debbie Dunlap, reporter for **Lancaster Intelligencer Journal**; Joanne Spahr, assistant editor, **Lancaster Farming Newspaper**; William Miller, student teacher; Howard Work, community helper; and Mrs. Shirley Skethway, mother of three students in the program.

Citations of appreciation went to Morris Ressel, superintendent of city trees and parks of Lancaster City; Edward Minder, III, employer of students; Dwight Brubaker, superintendent of grounds at Host Farm; and Robert Shenk, employer of students. These four individuals are also on the craft advisory committee.

Greenhand degrees were given to: Kim Gamber, Pam Barr, Donna Macke, Carol Snyder, Teresa Stively, Kathy Hoar, Audrey Hershey, Barbara Northeimer, Tami Murphy, Pam Ream, Tami Trimble, Kris Brubaker, Deb Wright, Brian Craig, Beth Miller, Bill Monk, Tracy Rebman, Sharon Reynolds, Tom Summer, Deb Way, Cliff Verdigrim, Pam Skethway, Carol Sangry, and Bonnie Lefever.

Chapter farmer degrees for the students of floriculture went to: Kyra Sirbak, Krisy Kinsey, Terri Newswanger, Laurie Horn, Brenda Ross, Mark Wiker, Cindy Summer, Dallyn Reed, Denise Good, Careta Findley, Brenda Williams, Marvin Stanley, Donna Smith, and Donna Sheaffer.

Chapter farmers in horticulture are: Andy Ressler, Carin Reigelman, Tammy Lefever, Shirley Rudy, Tom Gilbert, Tim Wilk, Ralph Barley, Tracy Wettig, Kim Skethway, Bob Rowe, Linda Rogers, Mike Kimes, and Greg Allgyer.

Four of 11 individuals honored for their assistance to the Hans Herr chapter over the past year were: (left to right) Mrs. Linda Kline, Mrs. Shirley Skethway, William Miller, and Edward Minder, III.

Goldfish abound at this fish farm

Seen at a distance, the ponds and shed of Peoples Hatchery look like this. In all, there are 20 acres with an underground creek water supply system to 50 plus ponds.

By SUSAN KAUFFMAN

NEW PROVIDENCE – Near the small village of New Providence in Southern Lancaster County at the intersection of Cinder Road and Main Street and several ponds scattered across a grassy meadow. Midst those ponds is one almost 100 years old. With that 98-year-old pond, Hiram Peoples' grandfather started a fish hatchery which now produces two and one half million goldfish per year.

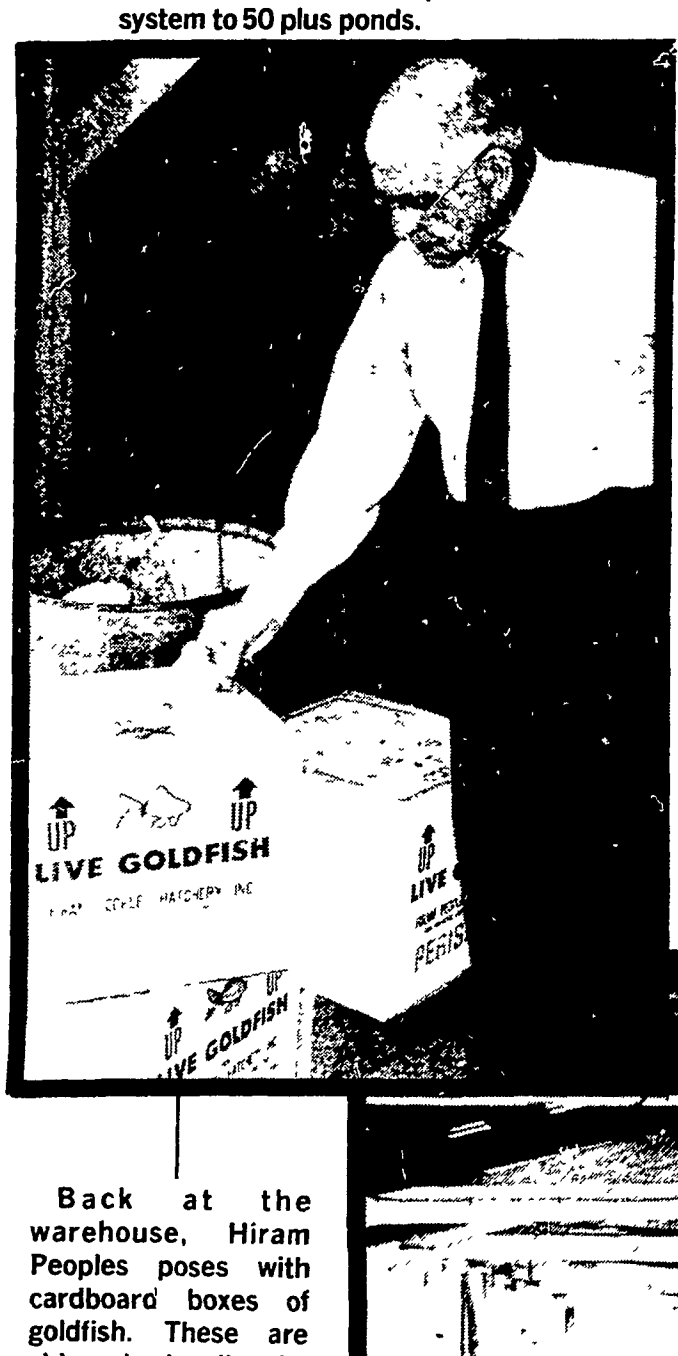
Who buys all these goldfish? Anyone who purchases these house pets from the major chains like K-Mart and Woolworth on the East Coast from Maine to Virginia. Peoples Fish Hatchery also markets its goldfish in London and Amsterdam, as well.

In addition to the raising of goldfish, Peoples' Hatchery also raises bluegills and bass for stocking farm ponds. More of the labor force at the hatchery, according to Hiram Peoples, is involved in the wholesale distribution of a complete line of pet supplies. The line includes almost everything from fish bowls to colored gravel, to wild bird seed to all types of pet bedding.

The present operator of Peoples Hatchery, Hiram Peoples, is an extremely energetic and busy 68-year-old man. Managing the diversified business which covers a number of states, as well as London and Amsterdam outlets, requires a quick mind and an agile body. Peoples says he learned the hatchery business from the family involvement and majored in economics in college.

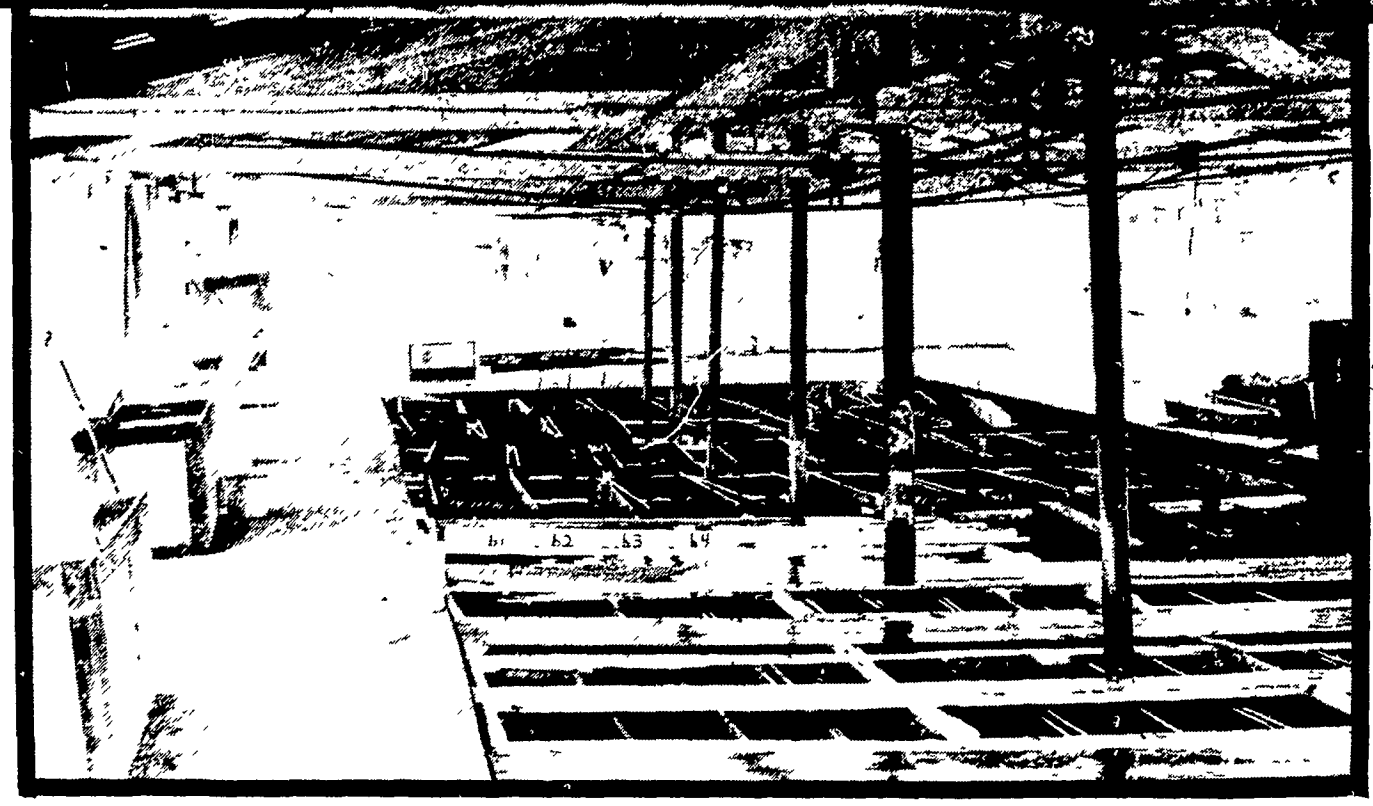
Besides his full-time involvement in the business, Peoples was a justice of the peace for 30 years. After retirement from that position, he became a notary public

(Turn to Page 53)



Back at the warehouse, Hiram Peoples poses with cardboard boxes of goldfish. These are shipped locally by parcel post. The goldfish are housed in plastic bags inside the cardboard boxes.

Peoples displays a scoop net of goldfish varieties.



This shot shows the open air storage area with individual cages for types and individual orders. Shipment takes place at 3 a.m.

On being a farm wife

—*And other hazards*

By JOYCE BUPP

Denim jeans seem to have become almost everyone's favorite article of clothing – and farm wives are no different. We wear them, not just because they're popular, but because they fit so perfectly into our busy lifestyles.

Once, in a moment of weakness many years ago, I attempted to wear a dress around this house. The cows promptly got out, and I had to hastily change to go chase the rascals.

That was the first and last time I ever attempted such weekday feminity.

Farm wives of two generations ago, however, had a different favorite article of dress. No rural lady worth her canning salt would have been caught in public during the daytime without her all-encompassing apron.

Mrs. Chester Stroh, a speaker at the state Society of Farm Women's Spring rally last week at Hershey, paid tribute to those long-wearing, long-suffering aprons of checked gingham or dark cotton materials. And she gave me a new respect for that almost forgotten housewife accessory.

How did you carry the eggs from the henhouse, your tomatoes and beans from the garden, a supply of wood for the old cookstove, or the new nest of baby chicks that turned up in the back corner of the barn?

Why, you made a carrying bag by grasping the corners of that generous and accomodating apron and moved whatever it was to a more useful location, all in one quick trip.

If company unexpectedly dropped by, and the children sported dirty faces, that apron served as a handy washcloth and towel for an impromptu facial.

The protective cottons lent themselves as potholders for the bread and cakes coming from the oven, cloths for cleaning spotted eye glasses or dusty tables, or as handy swatters for a pesty fly sitting on your forehead.

Shy toddlers hid behind the familiar apron and peeked out at strangers from its safety and security.

It was a sweater when you were chilly; it was a fan when the sun grew hot overhead. You could laugh into it or use it for wiping away tears of sadness.

And when it was dirty, you could turn it over and there it was, your closest friend, companion and confidante, all ready to serve you for another whole week.

Ida's Notebook

Ida Risser

The square dance group, Foot and Fiddle, which Allen and I helped to start has just completed its 31st year. Sometimes other groups in the county claim to be the oldest but I disagree with their claims. In fact the forerunner of our group was the Rural Youth of Lancaster County and my husband helped to organize that group in 1937. So our roots really go rather far back in this area of recreation. In 1946 I attended a Recreation School at Plainfield, Vermont, and it was an experience in international living. Some of the participants at that time were planning to travel to Europe and start the new state of Israel. There were Negroes, Chinese and Swedes, all living at Goddard College for two weeks.

But to get back to what I started to say – at the most recent meeting of our group, I was asked if I'd worn my square dance dress to church. For a moment, I was perplexed at such a question; but, then I realized what was meant. This style of dress is now in "style" as I'd discovered when my daughter bought a new dress for a concert. Imagine, wearing my wide skirt and rickrack trimmed blouse to church!

xxxxxx

A few weeks ago when there was a strong wind blowing, Philip lost his expensive basketball. He had laid it down along the barn wall when he finished playing with it. When it rolled near to his dog, Buster, his sister moved it. Then it simply disappeared.

After a great deal of hunting, it was found across the river, wedged between some limbs on the opposite bank. Somehow it rolled behind the barn, through the woods and down a hill. The wind must certainly have had fun playing "basketball" that day.

Goldfish

(Continued from Page 50)

official. All the while, he has served as a bank director for the Fulton Bank in Lancaster. Amidst a busy day of hatchery business, phone calls from several states, and appointments for the bank and notary concerns, Hiram Peoples crammed into his schedule some time to show this reporter the workings of this 2½ million goldfish per year production process.

Having driven a short distance from the main office and warehouses situated in the rural village of New Providence, Peoples started his explanation in the pond area.

"We have 50 to 60 ponds here where the goldfish, bass, and blue gills are raised," he began. "The ponds are fed by creek water," he continued.

The whole pond system in the meadow is supplied with fresh creek water by a series of pipes laid underground starting at the top of the meadow at a dam. An overflow safety system is also part of the underground plan.

Each Spring all of the ponds have to be emptied and disinfected before the new year of hatching begins. Peoples said it takes about one week to drain and disinfect a pond. The fish that are left in the ponds over the Winter hibernate under the ice. In the early Spring, they are removed from the larger ponds and kept in smaller storage ponds until they can be returned to the disinfected ponds once more.

Peoples explained that the fish have to be raised in earth-bottom ponds.

"Some soils do not work well for fish hatchery purposes," he related. "England does not have any soil that will grow gold fish properly. Italy does, but they are a very poor quality," he mentioned by way of illustration.

"This soil here on these 20 acres is very good for fish ponds," he remarked.

With the requirements of the right soil for pond bottoms and the necessary fresh water supply and the assistance of 22 full and part-time employees, Peoples Hatchery operates a thriving business.

To make the most of the facilities available, and to keep a constant supply of live goldfish throughout the year, even when the fish normally hibernate in the Winter, Peoples has constantly learned newer management techniques over the years. His grandfather, Hiram Peoples Stager, started with one large pond. Now his grandson manages in excess of 50 ponds, aluminum storage tanks for Winter use, and seven delivery tank trucks. A number of changes have taken place since 1880 when the founder of this hatchery started the business.

"By the old method of fish hatching," Peoples explained, "You would allow the fish to spawn and hatch in the same pond and then collect out of the pond whatever happened. Now we use breeder ponds where the female lays her eggs upon a spawning net." These nets are wire screens which have spanish moss entwined in and out of the wire mesh. The male follows the female and throws his sperm on the eggs the female has recently laid.

"If the male and female are not equal in size, and the male is smaller, for instance, he will not be able to cover the entire egg area and all those uncovered eggs will be lost. That is why we sort the fish for the breeding pond to keep uniform sizes," Peoples added.

Once the spawning nets are covered, they are removed from the breeding pond and placed into another pond for hatching. When covered with spawn, the nets are white. Without the spawn on them they are dark gray in color.

"By using the breeding ponds, the spawning nets and separate hatching ponds, you can use your ponds more efficiently," remarked Peoples. "You can increase your production from 50,000 to half a million, and you have much better control by using this newer method."

"You are left to the mercy of the weather as far as hatching goes," he added.

Once the fish are hatched, their size will depend on the cubic feet of water each fish has to swim in. The fish are fed every day until Fall to give them plenty of body fat to hold them through Winter's hibernation. The goldfish hatch in the Spring and are sold in the Fall as are the bass. The blue gills have to be a year old before they are sold, however.

As the fish hatch in the hatching ponds during the Spring, they are taken out and sorted on wooden sorting tables twice a week. After being sorted according to size gradations by inches, they are placed into wire mesh holding cages inside a storage building with sides open to the elements. The cages are two and one-half feet wide by five feet in length.

Part of the storage area is used to hold purchased orders of goldfish overnight Each day, usually in the afternoon, the fish are counted out on the sorting tables and placed into similar cages and coded by purchasing orders. The fish stay in the filled-order cages overnight. At 3 o'clock in the morning the delivery tank trucks pull up to the storage area and load the orders for that day's delivery.

"We want the fish to be in the tank trucks for as short a time as possible," Peoples explained. "Some of the fish are hauled for as much as three days, though, without problems because air is agitated into the delivery tanks," he added.

For local delivery or those which are shipped by United Parcel, the fish are placed in plastic bags inside cardboard boxes. Most of the goldfish are delivered by tank trucks, however.

To keep a supply on hand for Winter distribution, Peoples utilizes special Winter equipment supplied with Spring water. Aluminum tanks have the Spring water supplied to them and the half million fish are fed and maintained in these tanks as if it were not their Winter hibernation period.

The biggest problem with fish hatching is hot weather, according to Peoples. Trout need colder water than found in Lancaster County ponds to survive through hot summers, he explained. The goldfish, bass and bluegills, however, will tolerate warmer water.

To establish bluegill or bass in a farm pond, Peoples suggests that the owner have it properly stocked according to cubic feet of water per fish. The bass and blue gills are very adaptable to the pond environments found locally, said Peoples, and will maintain their population themselves for at least five years. They need not be fed, but an application of 5-10-10 fertilizer at a rate of 100 pounds to an acre of water surface would be advised.

As with most other farming techniques and operations, the raising of goldfish, bass, and bluegills requires constant upgrading of management to improve production and quality as well as efficiency.

To drive past the quiet meadow with its ponds scattered across its breadth and length, one would hardly imagine that such a large business and such precise scientific technology is actually controlling the peaceful ponds. And behind all of that is an energetic man who says retirement is not in the picture as far as he is concerned.

"Retirement is the worst thing to happen to a lot of people and I don't intend to ever retire!" he stated.

This week's gathering of recipes is entitled "Mushroom Marvels." And, marvels they are, because of the unique way they add zest to other foods. Mushrooms complement salads, soups, casseroles, etc., and are just as delicious served as snacks or stuffed.

If, after trying several of this week's fare, you should decide you would like more recipes featuring mushrooms, send a self addressed, stamped envelope to the American Mushroom Institute, P.O. Box 373, Kennett Square, Pa. 19348. The AMI stresses that the envelopes must be stamped for results.

PITTSBURGH'S MUSHROOM SANDWICHES

1 pound fresh mushrooms
10 tablespoons butter or margarine, divided
¼ pound thinly sliced cooked ham, slivered
¼ cup sliced scallions or green onions
1½ tablespoons chopped chives
½ teaspoon salt
¼ teaspoon tarragon leaves, crumbled
1/8 teaspoon ground black pepper
6 eggs
8 slices white bread

Rinse; pat dry and slice fresh mushrooms (makes about five cups). In a large skillet melt four tablespoons of the butter. Add mushrooms; saute for three minutes; remove and set aside. In the same skillet melt two tablespoons of the butter. Add ham, scallions, chives, salt, tarragon and black pepper; saute for two minutes. Crack eggs open into the skillet. Cook and stir very gently just until eggs begin to firm up. Stir in sauteed mushrooms; heat only until hot. Spread remaining four tablespoons butter, on both sides of each slice of bread. Pile mushroom-egg filling on four slices. Top with remaining bread slices; secure with toothpicks. Arrange on a rack in a broiler pan. Place under a preheated hot broiler about six inches from heat source until bread is toasted about one minute on each side. Yields four sandwiches.

HAMBURGER CASSEROLE

1½ pounds hamburger
1 can whole kernel corn
1 can cream of mushroom soup
3 cups boiled noodles
1 cup dairy sour cream
1 onion, chopped
1 cup bread crumbs
1 can cream of chicken soup

Fry hamburger and onion together and add other ingredients except bread crumbs. Place in casserole. Top with bread crumbs. Bake at 350 degrees F. for 30 minutes or until hot

Esther Mae Martin
Pine Grove, Pa.

xxx

FRESH MUSHROOM CUTLETS

1 cup finely chopped mushrooms
1 green onion, minced
2 eggs
½ cup bread crumbs
¾ cup grated mild cheddar cheese

Mix all ingredients well, but do not turn into a mush. Pinch off about one teaspoon of mix and saute in a little butter until done. Taste and adjust seasoning if necessary. Form remaining mix into eight patties about ¾ inch thick and press into shape between sheets of waxed paper. Fry patties in butter over low heat. The outside of the cutlet should be crisp and the inside moist Serve plain, or melt a slice of cheese over each cutlet before serving Also, delicious with cheese sauce. Serves four

NOTE: These are easy, but must be made the very last minute before frying.

Mary Reiff
Shippensburg, Pa.

xxx

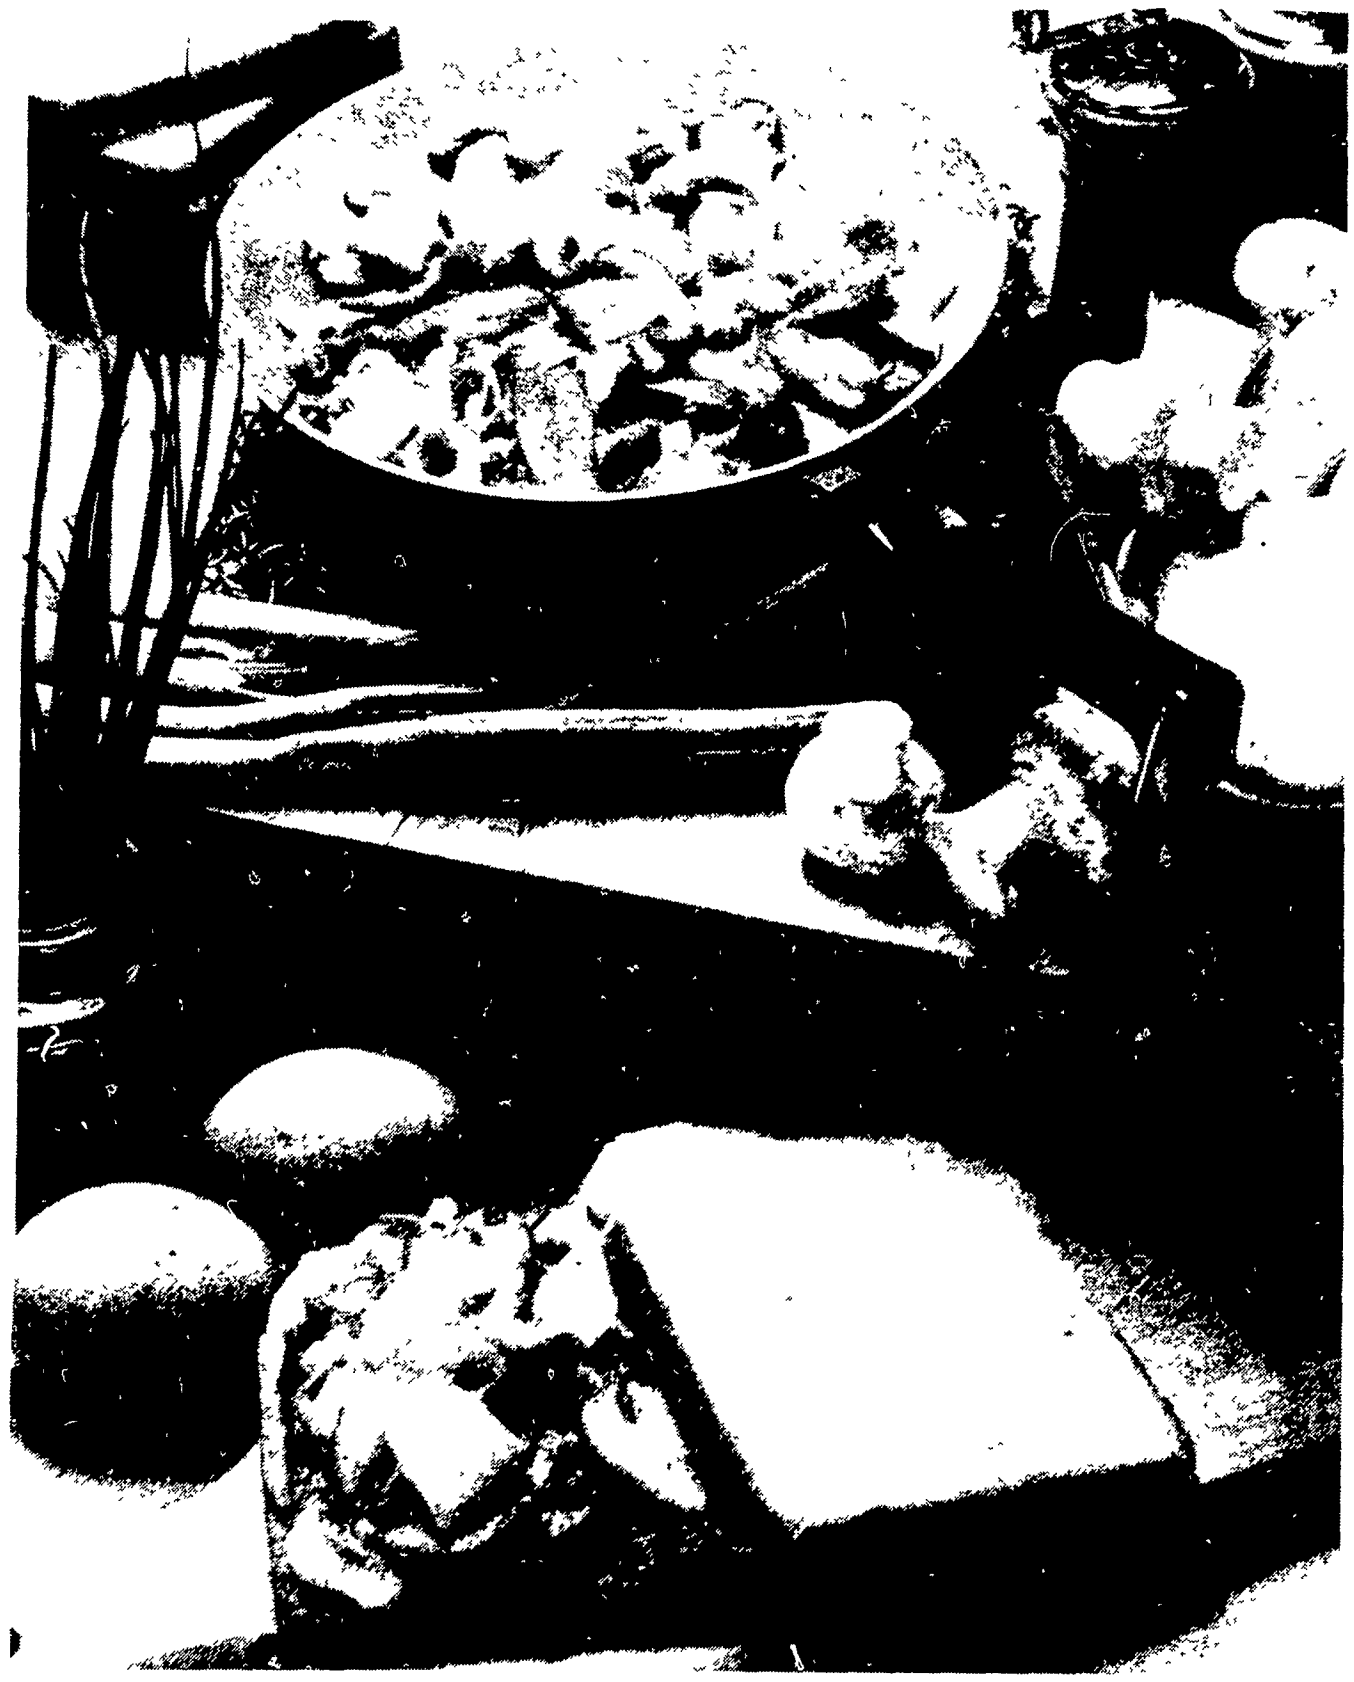
MUSHROOM CASSEROLE

1 pound fresh mushrooms
4 slices heavy bread buttered on one side
½ cup green pepper
½ cup celery
½ cup mayonnaise
Salt and pepper
2 eggs
1½ cups milk
1 can mushroom soup
Buttered crumbs
Grated Parmesan cheese

Saute mushrooms in three tablespoons butter Add green pepper and celery Cut two slices of bread into one inch squares and line bottom of 2½ quart casserole Add mayonnaise, salt, and pepper to mushroom mixture, and layer over bread squares in casserole Butter two more slices of bread, cut into one inch squares and put on top of mixture Beat eggs with milk and pour over other ingredients Refrigerate one hour or over night Spoon can of mushroom soup over all and top with crumbs and cheese Bake one hour at 300 degrees F

Barbara L. Smoker
Christiana, Pa.

xxx



Just the aroma of these savory mushroom sandwiches being toasted is enough to attract a long line of hungry "customers."

GRILLED MUSHROOMS & CHEESE

½ pound fresh mushrooms or 1 can (6 to 8 oz.) sliced mushrooms
3 slices bacon
6 slices toast
3 tablespoons mayonnaise
1 medium onion, sliced in rings
1 cup shredded Cheddar cheese

Rinse, pat dry and slice fresh mushrooms or drain canned mushrooms; set aside. Saute bacon until crisp; drain and crumble. In three tablespoons of the bacon drippings, saute mushrooms for two minutes; set aside. Spread toast with mayonnaise; top with sauteed mushrooms, crumbled bacon, onion rings and cheese. Place on a cookie sheet. Bake in a preheated moderate oven (375 F.) for eight minutes or until hot and cheese is melted. Serve as a luncheon or supper dish. Or, cut each piece into quarters and serve as an hors d'oeuvre. Yields six open sandwiches or 24 hors d'oeuvres.

Coutesy American Mushroom Institute
Kennett Square, Pa.

xxx

MUSHROOM SOUP ORIENTAL

1 quart beef stock
3 tablespoons soy sauce
1 cup diagonally sliced celery
1 cup thinly sliced carrots
½ cup sliced onions
1 (10 oz.) package frozen spinach or ½ package fresh spinach
½ pound mushrooms sliced

In a large saucepan bring beef stock and soy sauce to a boil. Add celery, carrots, and onions Reduce heat; cover, and simmer for five minutes Add spinach and mushrooms Return to boiling point Reduce heat and simmer for five minutes or until vegetables are crisp tender

HONEY BROOK MOLASSES

- BAKING MOLASSES • TABLE SYRUP
- BLACKSTRAP MOLASSES
- CLIP & SAVE FOR YOUR RECIPE FILES:

MOLASSES CRINKLES

¾ cup soft shortening
1 cup brown sugar (packed)
1 egg
¼ cup Honey Brook Baking Molasses
2¼ cups GOLD MEDAL Flour
2 tsp. soda
¼ tsp. salt
½ tsp. cloves
1 tsp. cinnamon
1 tsp. ginger

Mix shortening, sugar, egg and molasses thoroughly. Blend all dry ingredients; stir in. Chill. Heat oven to 375 degrees (quick mod.). Roll dough into balls the size of large walnuts. Dip tops in sugar. Place, sugared-side-up, 3" apart on greased baking sheet Sprinkle each with 2 or 3 drops of water. Bake 10 to 12 minutes. Makes 4 dozen

Junior Cooking Edition

Although the strawberries may be a little late this year, they're well worth waiting for and a tasty treat at any time of the day. This week the Junior Cooking Edition has some of our readers' favorite strawberry dish recipes plus some other good foods to make too.

Included you will find strawberry pie, strawberry delight, and two recipes for strawberry shortcake, plus recipes for finger gelatin, orange chiffon cake, and peppermint candy.

Don't forget to send your favorite recipe into the Junior Cooking Edition so that it can be shared with all the readers. Be sure to include a list of all the ingredients and complete directions. Send your recipes to: **Lancaster Farming**, Junior Cooking Edition, Box 366, Lititz, Pa. 17543. Don't forget your name, age, address, and phone number.

STRAWBERRY PIE

2 cups granulated sugar
2 cups water
3 tablespoons corn starch
1 box of 3 oz. size strawberry gelatin
10 oz. strawberries

Combine sugar and cornstarch. Add water and cook until mixture is thick. Remove from heat and add gelatin. Cool at room temperature. Then add strawberries and pour into a nine inch baked pie shell. Can be served with whipped cream.

xxx

STRAWBERRY SHORTCAKE

2 cups flour
¼ cup granulated sugar
3 teaspoons baking powder
½ teaspoon salt
½ cup butter
1 egg
milk
2 tablespoons margarine, melted

Topping:

2 pint boxes fresh strawberries
½ cup granulated sugar
1 cup heavy cream
2 tablespoons confectioners' sugar

Wash berries in cold water and set aside to dry Save several nice berries for a garnish on top of shortcake Remove stems from berries and slice half of them into a bowl. Pour ¼ cup granulated sugar over sliced berries and mix With a fork, crush other half of berries, pour ¼ cup sugar over them

Beat cream and confectioners' sugar until stiff Refrigerate Sift flour with granulated sugar, baking powder, and salt Cut butter into chunks and mix into flour mixture until it is in very small pieces, each covered with flour Break an egg into a measuring cup and add enough milk to make ¾ cup Mix with a fork Pour milk and egg mixture into center of flour mix, stir until very well moistened Pour into greased 8 x 1½ inch round pan. Bake 25 to 30 minutes at 425°F.

When cool, remove cake from pan. Cut cake in half, crosswise, forming two layers. Place bottom half of cake on serving plate, cut side up. Brush surface with melted butter. Spoon on half of the crushed and sliced berries, set top half of shortcake in place, cut side down. Spoon on remaining strawberries. Pour whipped cream on top of shortcake and place whole strawberries lightly on top. Serve warm. Serves eight.

xxx

STRAWBERRY SHORTCAKE

½ cup shortening
2 cups granulated sugar
1 cup milk
3 cups flour
2 teaspoons baking soda
4 eggs

Syrup:

1 cup strawberries
1 cup granulated sugar
2 egg whites, beaten

Mix ingredients for shortcake and stir until well mixed. Pour into greased pan and bake at 375°F. for 35 minutes or until done. Let cool.

Mix strawberries and sugar. Add beaten egg whites Pour on slice of shortcake before serving.

xxx

FINGER GELATIN

3 small boxes flavored gelatin
4 packs of unflavored gelatin
4 cups water - two hot, two cold

Mix flavored and unflavored gelatin together with water. Stir well. Let cool. Then cut with cookie cutters. Serve.

Sara K. Stoltzfus
Leola, Pa.

xxx

ORANGE CHIFFON CAKE

2¼ cups flour
1½ cup granulated sugar
3 teaspoons baking powder
1 teaspoon salt
½ cup salad oil
5 unbeaten egg yolks
¾ cup cold water
orange flavoring
1 cup egg whites
½ teaspoon cream of tartar

Sift flour, sugar, baking powder, and salt into mixing bowl, and mix well Add salad oil, egg yolks, cold water, and orange flavoring Measure into bowl egg whites and cream of tartar. Beat until very stiff, pour yellow mixture over egg whites and blend with rubber scraper. Pour into greased cake pan and bake at 350°F. for 50 minutes.

James Wenger
Age 5
New Holland, Pa.

xxx

PEPPERMINT CANDY

7 cups confectioners' sugar
3 egg whites (unbeaten)
¼ cup margarine (melted)
2 teaspoons peppermint flavoring or more

Note: if peppermint oil is used, use sparingly, not more than ¼ to ½ teaspoon before tasting.

Mix ingredients, roll into a ball, pat, and cool. Coat with more sugar if not stiff enough. Use more egg white or margarine if too stiff. Makes around 77 patties. Use chocolate coating to coat.

Naomi B. Yoder
Age 10
Christiana, Pa.

STRAWBERRY DELIGHT

1 package whipped cream topping
crumbled cookies
8 oz. cream cheese
1 quart crushed strawberries

Mix whipped cream topping as directed on package. Blend in cream cheese. Crumble cookies and place in the bottom of a pan. Pour in whipped cream topping on top of cookies. Place in refrigerator and let cool. Add strawberries on top before serving.

Age 10
Conestoga, Pa.

Farm Women Societies

Berks Co. Society 1

Twenty members of the Berks County Farm Women Society enjoyed a southern meal prepared by Larry Hicks. Hicks, originally from Louisiana and now living near Douglassville prepared the meal in the home of Mrs. Anne Yanos where the meeting was conducted.

It was reported that the group will be having a refreshment stand at the Charles Rhoads' sale in Amityville on June 10.

Sixteen members attended the annual Spring Rally that was held at the Hershey Convention Center.

The picnic at Berks Heim will be on June 11

The group will be sending five people to camp that live at the Hamburg Center.

Donations will be going to the Dairy Princess Contest and the Amity 4-H Club. The group will also pay the rentals of sewing machines for the Oley 4-H Club.

Next meeting will be held on June 14 in the ome of Mrs. Catherine Yanos, Douglassville, R2 starting at 8 p.m

Berks Co. Society 6

"Come as You Are" was the theme of the program at the meeting of Berks County Farm Women Society 6. The group met on May 16 at the home of Mrs. Carl Herbein, Oley.

During the business meeting, donations were given to the Oley Fire Co., the ambulance fund, and the Oley playground.

The group will be sponsoring five children from the Hamburg State School to go to Camp Swatara this Summer.

The ladies decided to serve refreshments at two sales in Oley, on June 3 and 17.

The next meeting will be June 20 at the home of Mrs Sally Hauseman, beginning at 8 p.m.

Lancaster Co Society 2

The May meeting of Lancaster County Society 2 was held at the home of Pauline Gordley. Cohostess was Esther Petticoffer.

The society will have a food stand at a sale at Fry's, East Main St., Lititz, on July 1, starting at 9 a.m.

CHICKEN SUPREMES DUXELLES

6 slices white bread
6 boned and skinned chicken breasts
1⅔ cups Duxelles*
1 egg
¾ cup butter or margarine, melted

Preheat oven to 375°F. Tear pieces of bread into the container of the food processor with the slicer blade. Run until bread crumbs are fine, about three or four seconds (makes about two cups). (Or, use a grater or electric blender). Place in a small pie pan. To stuff chicken, place breasts on a board, smooth side down. With your fingers locate the natural pocket on the boned side of each breast. Stuff with about ⅓ cup of the Duxelles. Fold the end of the breast to enclose the stuffing (it is not necessary to tie or fasten with toothpicks). In a small pie pan lightly beat egg. Dip both sides of chicken breasts in egg; roll in bread crumbs. Place breasts in a shallow baking pan. Pour melted butter over the top. Bake, uncovered, for 35 minutes, basting frequently with pan drippings. Garnish with watercress and lemon slices, if desired. Yields six portions.

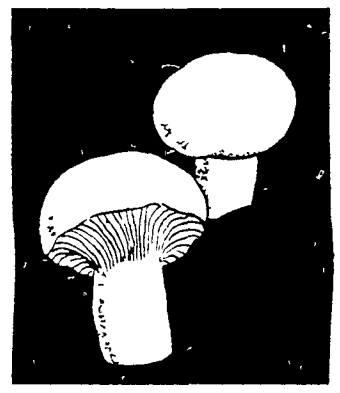
***DUXELLES**

1 small onion
1 pound fresh mushrooms
8 sprigs fresh parsley
¼ cup butter or margarine
½ teaspoon salt
1/8 teaspoon ground black pepper
¼ cup white wine

Cut onion into quarters. Place in the container of the food processor with the steal blade. Coarsely chop onion; remove from processor. Place one-third of the mushrooms in the food processor container; chop finely. Repeat process twice using one-third of the mushrooms each time. Place onion and mushrooms in a clean cloth; twist tightly to extract as much moisture as possible (use liquid in soups, stews, etc.). Pinch off parsley leaves; place in the food processor; chop finely (makes about ¼ cup). Or, chop onion, mushrooms and parsley with a sharp knife.) In a large skillet melt butter; add onion); saute until transparent, about two minutes. Add mushrooms, salt and black pepper; saute over high heat, stirring constantly until liquid has cooked almost entirely away, about four to seven minutes. Pour in wine, cook over high heat stirring constantly until all of the liquid has cooked away. Stir in parsley. Cool thoroughly; cover and refrigerate until ready to use. Yields 1¾ cups.

(Turn to Page 58)

A food processor helps to speed preparation of this elegant but easy mushroom stuffed chicken breast.



Seedbeds that help you sleep better.

Put your fields to bed with Allis-Chalmers disc harrows and chances are you ll sleep better Because these tough harrows with their extra heavy blades slash through heavy soils Provide a proper seedbed year after year Spring-steel bearings give years of shock-absorbing protection against rust freeze-ups —and stay aligned too Stop in Look over the 2300 series with 75 lbs per blade Or the 3000 series with up to 173 lbs per blade

MUSHROOM BREAD SNACKS

1 loaf thin white bread
¼ cup butter
2 spring onions, chopped
3 tablespoons flour
Accent
Salt and pepper
1 cup cream
1 teaspoon lemon juice
½ pound chopped mushrooms

Saute mushrooms and onion in butter. Add flour, accent, salt and pepper, cream, and lemon juice. Blend well. Remove crust from bread and flatten by rolling with rolling pin. Spread with mixture and roll up in a jelly roll fashion. Bake for 10 to 15 minutes at 400 degrees F. Cut into snack size pieces.

Mrs. Fred H. Hartlaub
Gettysburg, Pa.

xxx

HOT & TANGY MUSHROOMS

3 pounds mushrooms
¼ cup olive oil
1 teaspoon crushed red pepper
3 ounces cooking wine
8 cloves garlic, diced
1 tablespoon oregano

Boil mushrooms for five minutes; strain. Brown garlic in oil with oregano. Add mushrooms, hot peppers, and wine. Simmer for one hour or until mushrooms are completely cooked. Yields six to eight servings.

xxx

PARISIAN MUSHROOM SALAD

8 ounces button mushrooms
3 tablespoons wine vinegar
½ cup chopped cooked ham
3 tablespoons mayonnaise
½ teaspoon sugar
Garnish:
Hard cooked egg quarters
Pinch cayenne pepper

Trim the base of the mushrooms stalks and wipe them with damp cloth. Slice the mushrooms. Mix the mayonnaise with the vinegar and the sugar to make a smooth sauce. Place the prepared mushrooms and ham in a serving bowl and toss in the mayonnaise mixture. Serve garnished with hard cooked egg quarters sprinkled with cayenne pepper. Serves four to six

xxx

HAMBURGER MUSHROOM TWIST

1 pound lean hamburger
Salt and pepper to taste
2 tablespoons parsley
1 small onion, chopped
1 small can tomato paste
1 package (8 oz.) grated Cheddar cheese
½ tsp. oregano
½ pound fresh mushrooms
1 cup chopped green olives

Brown hamburger seasoned with oregano, parsley, pepper and salt. Add chopped onion, mushrooms and olives. Mix ingredients and add tomato paste, simmer five to 10 minutes. Top with grated cheese and serve after cheese is slightly melted.

xxx

STUFFED MUSHROOMS

1 pound medium size mushrooms (about 18)
¼ cup butter or margarine, melted
¼ cup green onions, finely chopped
¼ cup water
1 cup herb seasoned stuffing

Wash mushrooms and remove stems. Dip caps in melted butter (or margarine) and place upside down in a shallow baking pan. Finely chop ¼ cup of the mushroom stems and saute with green onions in remaining butter (or margarine), adding more butter if necessary. Add water. Lightly stir in stuffing. Spoon mixture into mushroom caps. Bake at 350 degrees F. until hot, about 10 minutes. Makes about 18.

Above two recipes by:
Mrs. Claire Coombs
Gardners, Pa.

xxx

CREAM OF MUSHROOM SOUP

2 cups mushrooms (about ½ pound)
4 tablespoons chopped onion
4 tablespoons butter or margarine
4 tablespoons flour
3 cups chicken broth
1 cup light cream or whole milk
1 teaspoon salt
½ teaspoon pepper
¼ teaspoon ground nutmeg

Slice mushrooms through cap and stem; cook with onion in butter for five minutes. Blend in flour; add broth. Cook and stir until slightly thickened. Cool slightly; add cream and seasonings. Heat through. Serve at once.

Farm Women Societies

(Continued from Page 56)

Speaker for the day was Mrs. Ida Risser who spoke on travel in Pa. in the early days.

Lancaster Co Society 3

Members of Lancaster County Farm Women Society 3 were entertained on May 21 at the Coca Cola auditorium in Lancaster. Mrs. Suzanne Hoffman was hostess.

The business meeting was conducted by president Mrs. Miriam Moore. A contribution of $50 was given to the Cerebral Palsy fund. Also, $200 was given to help defray the cost of a wheel chair used locally.

Fifteen members of the group attended the Spring Rally held at the Hershey Convention Center.

Members of Society 3 will conduct a day camp in August as their state project.

The program was a slide presentation of a trip to Africa by Mr. and Mrs. Earl Stauffer.

Next meeting will be June 17 at Salem Lutheran Church, Ephrata.

Lancaster Co. Society 5

Twenty-seven members and one guest attended the meeting of Lancaster County Farm Women Society 5. The recent meeting was held at the home of Mrs. Paul Neff, with Mrs. Clyde Weaver hostess and Mrs. Charles Forney co-hostess.

During the business meeting, final plans were made for a one day trip to the Poconos on June 14.

Speaker for the meeting was Dan Fitzkee, Manheim, whose topic was bees.

The next meeting will be a progressive party on June 24 at noon. The homes of Eileen Bruckhart, Pauline Longenecker, Sandy Yocum, and Esther Graybill will be visited.

Lancaster Co. Society 8

On May 20, Lancaster County Farm Women Society 8 met at the home of Grace Bixler, Marietta R1. Kathryn Heisey, president, presided over the meeting.

Barbara Walsh, Pennsburg R1, presented the special feature of the afternoon. She and her husband had spent a year at the John McCurdy Mission School in Espaniola Valley, New Mexico. She told of her experiences there and showed several tapestries which she had made.

Nine members visited Conestoga View recently. Twelve members attended the Spring Rally.

A representative of the Mount Joy Fire Company showed photographs and drawings of the proposed new firehouse facility.

Hostesses providing refreshments were Grace Bixler, Ruth Drager, Anna Wolgemuth, Helen Wivell, and Hettie Ginder.

Mrs. John Wenger, Manheim, will present chalk drawing at the next meeting which will be held on June 15, at the home of Vera Frey, Marietta. The meeting will begin at 7 p.m. Society 28 will be entertained.

Lancaster Co Society 9

The home of Mrs. Margaret Hagen, Rawlinsville, was the setting of Lancaster County Farm Women Society 9's recent meeting. Mrs. Margaret Kreider and Mrs. Mary Brinley served as cohostesses.

Program for the afternoon was Robert Shoff, from the Millersville World Wide Traveler for Education. He showed slides from a trip he and group from Kent University took to Cuba.

The June meeting of the group will be held with Mrs. Helen Eshleman from York County. It will be a covered dish luncheon at her home. Members are asked to bring folding chairs.

Lancaster Co. Society 14

Lancaster County Farm Women Society 14 met at the Strasburg Presbyterian Fellowship Hall on May 16. Hostesses were Mrs. Martha Herr, Mrs. Miriam Groff, and Mrs. Serena Groff.

The program was given by Francois Geanett, an exchange student from the French speaking part of Switzerland.

The next meeting will be June 14 when the group will meet at the Strasburg Mennonite Church and travel as a group to Village Green to play miniature golf.

Lancaster Co. Society 19

Lancaster County Farm Women Society 19 met at the home of Mrs. Irvin Denlinger on May 13.

The group decided to make a contribution to the Cancer Society. It was also determined that group membership would be discontinued after an absence of six months.

The program was a series of pictures from Alaska and Hawaii. The shots had been taken by Mr. and Mrs. Denlinger on their recent trips to the two states.

Lancaster Co. Society 31

The Lancaster County Farm Women Society 31 met at the home of Mrs. Kenneth Rutt on May 22.

A business meeting was held. It was decided that the group will donate $50 to the Welsh Mt. Clinic.

Dr. Joseph Besecker spoke to the group on the behavior of toddlers.

The next meeting will be a family picnic on June 25 at 12:30 p.m., at Wenger's Park. Mrs. Ben Wenger will be hostess and Mrs. Victor

Ladies Have You Heard

By Doris Thomas

Lancaster Home Economist

'TIS THE TIME FOR SALADS

Salads are delicious any time of the year, but they are especially good during the spring and summer months. Salads are by far the most imaginative dish you can serve. In general ... salads are served hot or cold, they can be tossed, arranged or molded. Salads can be served as appetizers, main dishes, accompaniments or desserts.

Salads can change with the seasons. Spring and summer salads should be light, airy and well chilled. Winter salads are heartier, more substantial for sharpened appetites.

The cold salad usually has one prime ingredient – the green or greens. The variety is endless. Your choice should depend on the availability, cost and flavor preferences. Iceberg lettuce is probably the best known, however there are many others such as: Boston and bibb lettuce, romaine, escarole, endive, chicory, cabbage, spinach and water cress.

When selecting greens, look for firm heads and crisp greens. To clean, remove bruised leaves and wash thoroughly but gently in cold water. Drain and dry thoroughly with paper or linen towels. Store in plastic bags in your refrigerator.

Every good cook needs special secrets for perfect dishes. The good salad-maker is no different. Here are a few tips for you: tender greens should be broken rather than cut to prevent bruising; sturdier greens can be broken or cut with a sharp knife; slice salad ingredients ahead of time and store in plastic bags, chill plates or serving bowls; keep garnishes simple; ornate, overdone garnishes make salads unappetizing; and avoid busyness with trimmings.

ABOUT SENSATIONAL SALAD DRESSING?

A salad is only as good as its dressing. No matter how attractive its appearence, the crispness of the greens, or the excellence of the other ingredients ... a salad cannot be perfect unless the dressing is just right.

To make the masterful dressing you must have the right oil. Because oil is the dominant ingredient ... it should be the best. Many of the gourmets believe that peanut oil is best, its flavor does not penetrate the other ingredients and it is lighter than other oils.

The vinegar should be one that will not overwhelm the flavors of the salad. White vinegar is ideal as are wine vinegars. Herbed vinegars may be used if other seasonings are not being added. Freshly ground pepper is recommended, for the oils of the pepper pick up the flavor of other ingredients.

There are two basic dressings. From these, most others can be prepared.

Basic French Dressing

2 teaspoons salt
1 teaspoon sugar
½ teaspoon dry mustard
½ teaspoon pepper
¼ cup water
2 cups oil
⅔ cup white vinegar or lemon juice

Combine salt, sugar, dry mustard, pepper and water in a large jar. Cover tightly and shake until well mixed. Add oil and vinegar or lemon juice. Cover and shake vigorously until well blended. Makes 2½ cups.

Basic Mayonnaise

2 eggs
1½ teaspoons salt
1 teaspoon dry mustard
½ teaspoon paprika
¼ cup white vinegar
2 cups oil

Combine eggs, salt, dry mustard, paprika, vinegar, and ½ cup of the oil in a blender container. Cover and blend on medium high speed until mixture is blended. Without turning off the blender, immediately pour remaining oil in a slow steady stream. Makes 2½ cups.

Beef product recalled

NEW YORK, N.Y. – Because of possible spoilage, cubed beef in water from Argentina bearing establishment number "1404," is being voluntarily recalled at the request of the U.S. Department of Agriculture.

The product was distributed throughout the United States.

Carol Tucker Foreman, assistant secretary of agriculture for food and consumer services, said the recall was issued by USDA's Food Safety and Quality Service as a precautionary measure. She said the laboratory results showed underprocessing of some canned meat products which could cause food poisoning.

The product is distributed under three brand names – "Manco," Pedro," and "Sexton" – throughout the United States to hotels, restaurants, schools, hospitals and other institutions. However, most of the "Sexton" product contains beef not involved in the recall and is safe to eat, Ms. Foreman said. She advised institutions to identify the potentially-dangerous product by looking for establishment number "1404" embossed on the lids of the cans.

Institutions are urged to return the cans, unopened, to their distributors. Meanwhile no future shipments of cubed beef in water from establishment "1404" will be passed for entry until the plant has taken corrective measures to ensure sterility of products for export to the United States.

Farm Women Societies

(Continued from Page 59)

Brinton will serve as co-hostess.

Lebanon Co. Society 14

The montly meeting of Lebanon County Farm Women Society 14 was held at the home of Mrs. Martin Gingrich. Cohostess was Mrs. Elvin Miller. Fifteen members and one guest were present.

President Mrs. George Ungemach led the business meeting. Members were reminded of the family picnic July 23. A donation was made to the Easter Seals.

The program was a show and tell with each member displaying her favorite hobby or craft. Also members tried to guess each other's baby picture.

The June meeting will be held on June 20, at 7:30 p.m., at the home of Mrs. Muriel Kegereis, Palmyra R2.

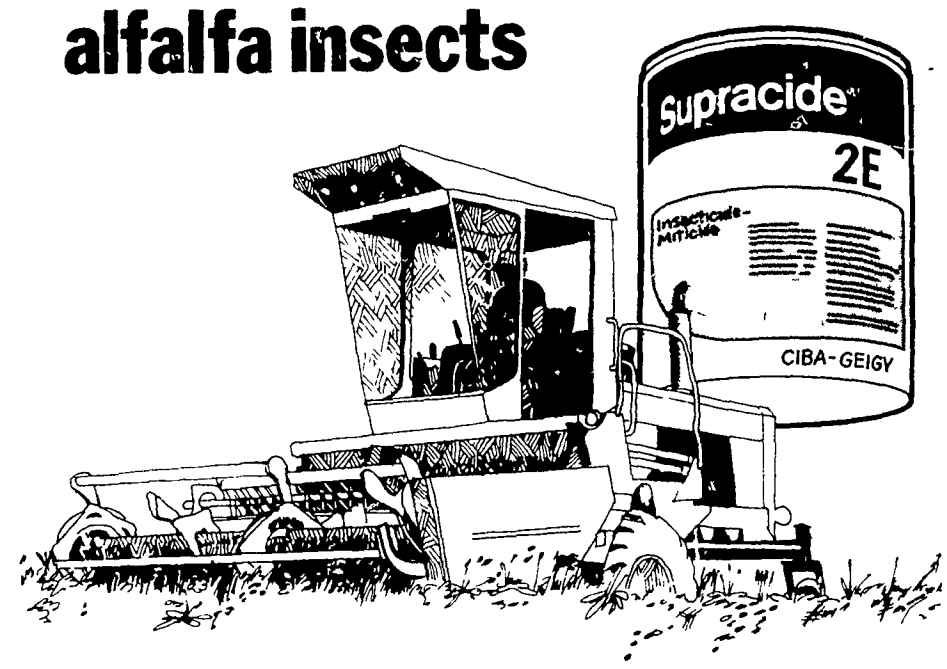
OUR RECOMMENDATION:
for alfalfa insects



You know how much a good crop of alfalfa is worth today. It's never been higher . You'd like to grow more of it per acre Insect control plays an important role.

Supracide is what to use. Why? 14 to 21 days of control, for one thing Short interval to harvest, for another. These are only two reasons to use Supracide on your high-priced alfalfa Ask us about some others

Supracide® trademark of CIBA-GEIGY for methidathion

SUPRACIDE 2E is not a restricted Insecticide - it is a general use pesticide.

CONTROLS - Alfalfa Weevil, Aphids, Spittlebugs, Leafhoppers.

It is a long lasting locally Systemic Insecticide.

Airsacculitis decreases egg production

UNIVERSITY PARK – Pennsylvania poultrymen can eliminate sudden and costly drops in egg production by inoculating laying hens against airsacculitis, an infection causing moderate to severe reduction in eggs.

"The stress of high egg production opens the way for airsacculitis to take its toll," explained Dr. Robert F. Gentry, veterinary scientist at Penn State University.

The inoculation prevents infection only when it is impractical for poultrymen to clean and sanitize buildings thoroughly, Dr. Gentry said. Complete sanitation and isolation is still the best practice for controlling the infection, he added.

He reported that one poultryman with 30,000 hens received $20,000 more in 24 weeks with inoculated hens than from a previous flock that was not inoculated. He said Pennsylvania is the fourth leading state in income from egg production.

"Egg producers with many large poultry houses close together find it physically impossible to clean and sanitize all the houses simultaneously or to raise several hundred thousand pullets simultaneously," he stated.

The inoculation exposes laying hens to a culture of the so-called F-strain of airsacculitis. This produces a mild reaction but gives a strong immunity, Dr. Gentry claimed. He said the inoculum is being used extensively to control the infection on poultry farms with multiple-aged hens.

A Commonwealth program for inoculating hens has been developed in co-operation with the Pennsylvania Bureau of Animal Industry. The proper amount of inoculum – 100 milliliters of F-strain culture per 1000 hens – is dispensed to the flock with a portable sprayer. The spraying is done by servicemen from feed companies and similar businesses.

"Slight respiratory reaction may be observed but it lasts only a few days and the hens are then resistant or immune to further infections. The immunity is confirmed by blood tests," he stated.

Such immunization has increased egg production by as much as 10 per cent for the entire laying period when no other infections were encountered. The average increase has been near five per cent, even where other problems were found in some flocks.

Inoculation of hens for airsacculitis is among the features in the Spring issue of "Science in Agriculture," the quarterly magazine of the Agricultural Experiment Station at Penn State. Interested persons can get on the mailing list free by writing to Director, Agricultural Experiment Station, 229 Agricultural Administration Building, University Park, Pa. 16802.

"Science in Agriculture" will be available in late May at county offices of the Cooperative Extension Service or from the Agricultural Mailing Room, 112 Agricultural Administration Building, University Park, Pa. 16802.

The Penn State scientist reported that pullets are usually free of airsacculitis until they are moved to laying houses. Then they become infected by equipment, wild birds, or by the causal organism in the air. Although the infection is not transmitted to humans, people can carry the organism on their clothing and shoes. The infection spreads slowly and is usually not detected until the hens reach peak production.

Surface applied nitrogen may increase soil acidity

FAIRFAX, Va. – Proper soil management to control soil acidity, which results from surface-applied nitrogen fertilizer, is an important production factor in continuous no-tillage corn. "The importance of lime with reduced tillage should not be overlooked" says Iowa State crop fertilizer specialist, Regis Voss. Most lime recommendations and related research information for effective row-crop production suggest plow-down application. Therefore, with the growing popularity of no-tillage systems, the effectiveness of surface-applied and unincorporated lime has become a question of concern to many. Much research has shown that soil surfaces become quite acid after several years and no-tillage production.

Recently, studies have been conducted by Agronomists at the University of Kentucky concerning this question of this effectiveness of surface lime applications against the acid-producing effect of nitrogen fertilizers. They discovered that, because the greatest portion of the acid-producing effect is concentrated in the soil's surface under the no-tillage system, neutralization of the acid condition is made easier. They concluded that surface liming is indeed an efficient way to reduce soil acidity caused by the continued build up of N-fertilizer in no-tillage programs. However, it was also reported that, if the soil is at a critically low pH level from the beginning, good incorporation of lime with the soil is necessary. Researchers agree that the acid-producing characteristic of the no-till system is probably the most serious soil problem encountered in the program. However, the current research in Kentucky demonstrates that surface liming can correct this acid condition.

Farm Women's Calendar

Today, May 27
Lancaster Co. Society 4 meeting, at the Barley home, Washington Boro, at 1:30 p.m.

Monday, May 29
Memorial Day observed.

Tuesday, May 30

Fulton Grange meets

QUARRYVILLE – Fulton Grange met in regular session May 22, at the Grange Hall, Oakryn. Mrs. William Rhoades, lecturer, presented the program with Emidie Parenti, Protective Services, Lancaster Co. Office Of Aging, and James Mullahan, field representative, Social Security Administration, Lancaster, were the speakers.

Parenti explained the roll of services provided by the Lancaster Co. Office Of The Aging which is supported by the federal, state and local funds.

Mullahan explained the Social Security set-up concerning necessary payments to the fund, requirements when requesting assistance when recipients are near retirement age or forced into medical disability retirement and answered many questions. He said Lancaster Countians may secure birth certificates by Writing to Bureau of Health, New Castle, Pa.

Edward L. Zug, master, conducted the business session when the Grange supported the following legislation in the Pa. Legislature; H.B. 406, Printers No. 2926, which would require members of the General Assembly to adopt or reject the recommendations of the Commonwealth Compensation Commission within 15 legislative days; H.B. 1377, Printers No. 1739, to amend the Tax Reform Code of 1971 to provide for family farm corporations exemption of the Capitol Stock Tax; and House Resolution 208, Printers No. 2924, which would support the passage by Congress of the Emergency Highway and Transportation Repair Act of 1978 (H.R. 10979).

They also supported S.B. 1385, Printers No. 1751, to amend the Capital budget of 1973-74 to provide for additional funds for the repair of damages of the snow to the present Farm Show Complex, provide additional funds for necessary modification as required for housing horses and beef cattle, and improve and light the parking lot. They likewise suported S.B. 1439, Printers No. 1818, which would permit any municipality to make emergency repairs to any State Highway located within the municipality with the Commonwealth reimbursing the municipality for actual costs of repair.

Fulton Grange presented the Pa. State Grange traveling flags to Kennett Grange 19, Chester Co., at their meeting May 24.

In observance of June Dairy Month, Fulton Grange will have their annual homemade ice cream and strawberry party at the next meeting on June 12. This will also be the Lancaster Co. Pomona visitation meeting when Salisbury, Colerain, and Fulton Granges will present the program on the theme of "Lancaster County's Contribution To The Building Of The State."

Seminar speaker named

UNIVERSITY PARK – Robert H. Rumler, executive chairman of the Holstein-Friesian Association of America and 1978 recipient of Penn State's Distinguished Alumnus Award, will speak at a seminar June 2 on the University Park Campus.

Rumler will discuss "The Role of Agriculture in International Trade." The seminar will be held at 10 a.m. on June 2 in Room 301, Agricultural Administration Building.

A 1936 Penn State graduate with a major in dairy science, the award recipient represents dairy and agricultural interests on many national and international advisory groups.

He joined the Holstein-Friesian Association of America in Brattleboro, Vermont, in 1948 as assistant executive secretary. He was promoted to executive secretary in 1953 and, since 1975, has been executive chairman. In addition, he has served as chairman of a subsidiary, Holstein-Friesian Services, Inc., since its formation in 1969.

have a nice weekend...

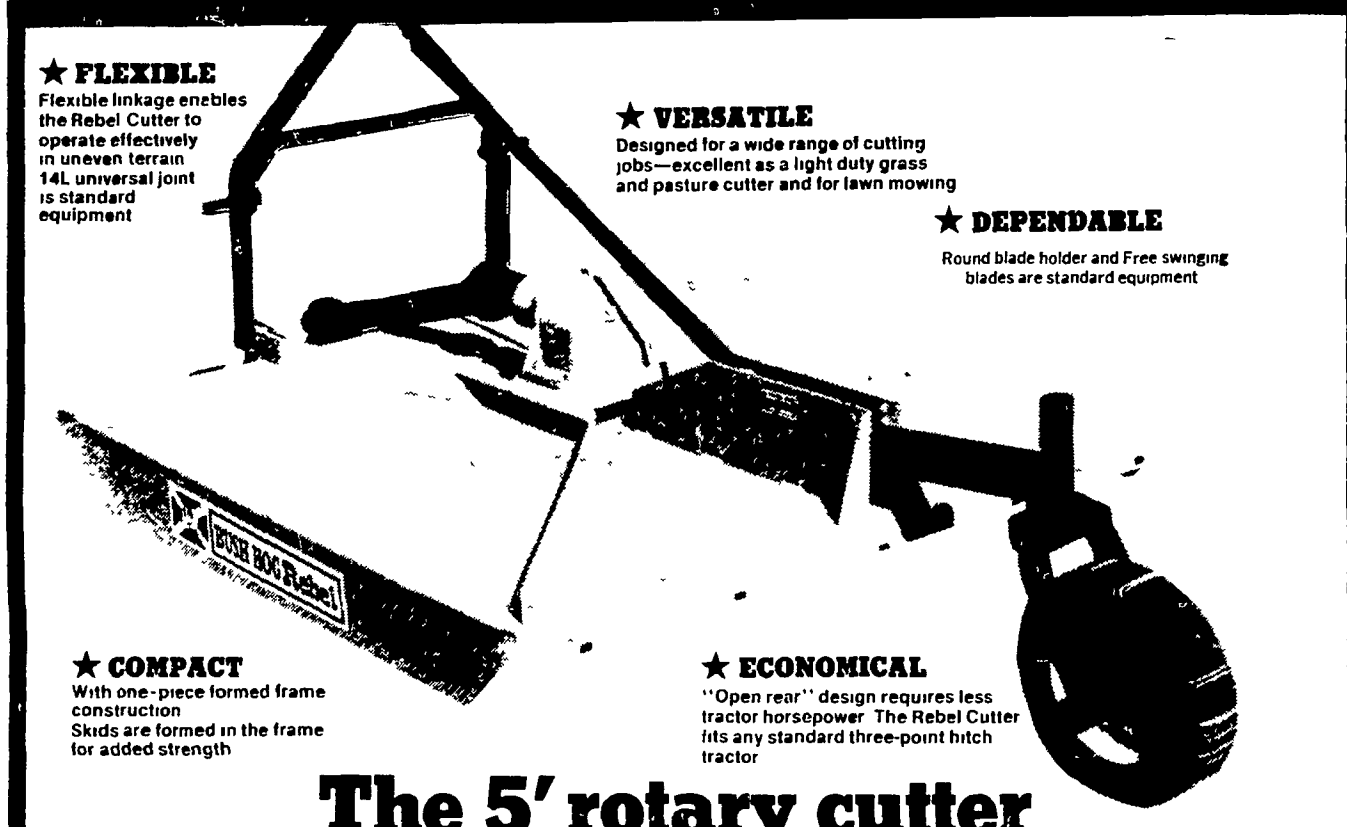
BUSH HOG® Rebel



★ FLEXIBLE
Flexible linkage enables the Rebel Cutter to operate effectively in uneven terrain 14L universal joint is standard equipment
★ VERSATILE
Designed for a wide range of cutting jobs—excellent as a light duty grass and pasture cutter and for lawn mowing
★ DEPENDABLE
Round blade holder and Free swinging blades are standard equipment
★ COMPACT
With one-piece formed frame construction
Skids are formed in the frame for added strength
★ ECONOMICAL
"Open rear" design requires less tractor horsepower The Rebel Cutter fits any standard three-point hitch tractor

The 5′ rotary cutter that anyone can afford!

From the southland where rotary cutting began, and from the company that started it all the Bush Hog Rebel Cutter has risen!

Compact and smooth in design, the Rebel is the perfect answer for the control of pastures, grassland and lawns It's the most economical 5-foot model in our line—a true "rebel" against high prices!

SPECIFICATIONS (Subject to Change Without Notice)

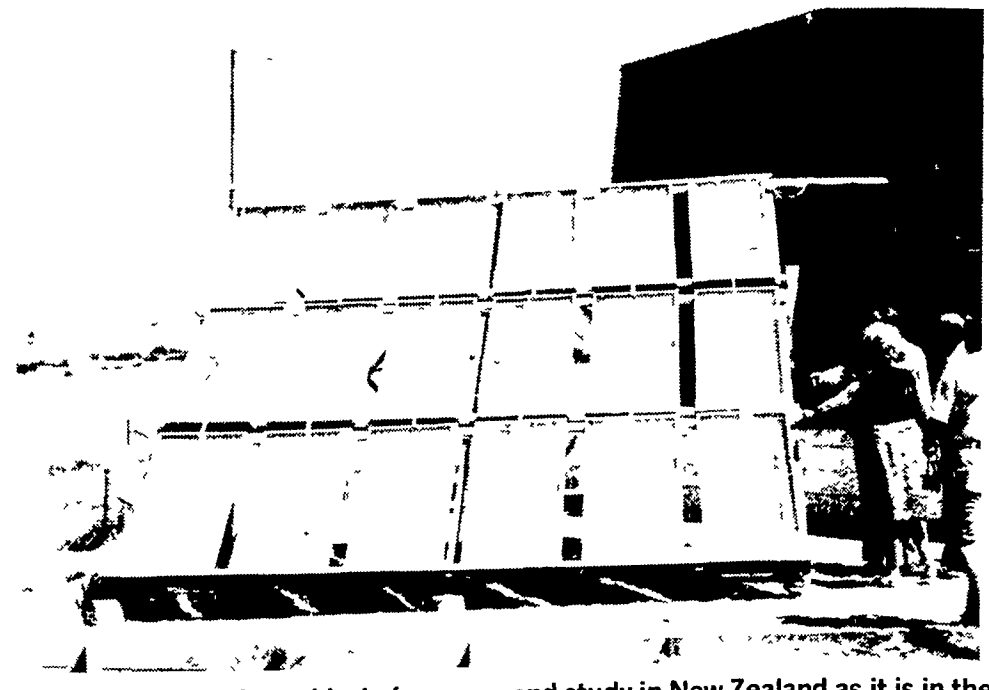
Ruth and Dave Roth overlook the Waikata Valley where thousands of sheep graze.



Energy is as much a subject of concern and study in New Zealand as it is in the United States. This solar heating system on an experimental dairy farm was inspected by visiting Americans.

Perry County dairy farm couple tells of tour through New Zealand on agricultural mission

By DAVE and RUTH ROTH

LOYSVILLE – While snow and ice covered much of Pennsylvania, Maryland, and other parts of the United States, we were enjoying the sunny skies and balmy temperatures of Australia, New Zealand, and the Fiji Islands. We count it a privilege to have been a part of the 33-member delegation of the Pennsylvania Agricultural Leaders' Goodwill People-to-People Mission. We feel that each of us was truly a "Goodwill Ambassador" as we exchanged ideas and talked with people in our many day-to-day contacts.

As we visited people on their farms and in their homes and as we talked with leaders of farm organizations, cooperatives, agricultural colleges, Embassies, and as we chatted informally with workers, we felt that we had common goals: peace and a better understanding among the peoples of the world and "the good life" for all of us. We both feel that we learned a great deal from the persons whose lives we touched and who shared themselves so generously with us.

We had many advantages on this trip. We all spoke a common language, English. We had a somewhat similar European heritage with the people we met. The climate was pleasant; the seasons are reversed in the South Pacific and it was Summer there then. The surroundings were beautiful with colorful flowers, beautiful trees, and unique animals and birds. There was a great variety in the physical geography with the mountains, valleys, lakes, waterfalls, and lovely countryside. The food was delicious and interesting, with an abundance of fresh fruits, vegetables, roast lamb, and beefsteaks, as well as fish. Transportation was efficient in both their luxurious airway service and in their practical coach service. The accommodations and services were good. People were friendly everywhere.

We will never forget the beauty of the countries and the unique flora and fauna we found there. We see in our minds' eyes thousands of sheep on the hills and in the valleys. Likewise, dairy and beef cattle grazed contentedly on the never-ending pasture lands. In Australia, because this continent was severed from the Asian mainland millions of years ago, we found very unusual, native animals, birds, trees, and plants. We enjoyed watching the koalas as they fed on the eucalyptus leaves of these gum trees. Great grey kangaroos, red kangaroos, wallabys hopped around near us so that we could touch them. We watched the platypus, with its webbed feet & its bill like a duck, from a greater distance. The native birds were a delight. A few of us remember, standing under an old gum tree and watching the kooaburras up in it, and singing an old camp song, "Kooaburra sits in the old gum tree, merry, merry king of the bush is he, laugh, Kooaburra, laugh, gay your life must be." The emus, large flightless birds and about 6½ feet in length, marched proudly near us The lyrebird, the cockatoo and other kinds of parrots, flock pigeons, and fairy penguins caught our attention.

The trees in Australia are beautiful and useful. The karri tree compares to the California redwood. It is giant in size and very fine furniture is made from it The tall wattle, with its yellow blossoms, has many uses bark for tanning, twigs and branches for fences, and furniture, The bottle trees get their name from the shape of their trunk The eucalptus trees have many uses. timber, decorative wood, medicines, etc There are thousands of wildflowers all around The waratah, a beautiful red flower, is the floral emblem of New South Wales

In New Zealand, we enjoyed the animals, birds, trees and plants also The Kiwi is a native bird and is viewed as their national bird emblem It is a flightless bird and the only known bird with nostrils in the tip of its bill It came to New Zealand 70 million years ago, it has nocturnal habits Its egg is ¼th of its own body weight; it lays the biggest egg of any species We listened to the songs of the tui bird and the bellbird They have several species of bats They have no snakes Deer rabbits pigs as well cattle and sheep, were brought from other countries. Salmon and trout are abundant.

New Zealand has beautiful trees. The Mamaku tree ferns are unusual. New Zealand is called "the land of the fern". The fern frond is a New Zealand emblem. The kauri trees are tall and yield excellent, fine quality timber for furniture and other uses. The Pohutukawa is called the Christmas tree. It has beautiful red blossoms and grows near the sea or a lake. There are many kinds of pine, beech, and evergreen trees. There are many palm trees. These and many other mental pictures come before our eyes as we re-live our experiences.

We noted some interesting differences as we traveled about these countries in the South Pacific. The drivers of the coaches and motor cars drove on the left-hand side of the road. Instead of yield signs, there were "Give Way" signs. Instead of a pharmacy, the sign read "Chemist". Instead of a dentist, the sign read "Dental Mechanic". We learned some new words in our vocabulary: A ranch or farm is a station. A meadow is a paddock. A flock or herd is a mob. An elevator is a lift. An automobile is a motor car. A bus is a coach. The interior region is known as the outback or bush.

Despite the almost unbelievable fact that we traveled 25,600 miles on our 23-day Mission, some people at the places we visited now seem quite close to us. These places on the map have a "personal" meaning for us now because of the people we met there.

We would like to mention a few of these people-to-people contacts we had that were especially meaningful to us. We will take our illustrations from our experiences in New Zealand.

Our stay at Christ Church on the South Island will long be remembered. Dave met some fellow Holstein breeders from Colorado, Maryland and other places in the United States. They had a good time renewing friendships and comparing notes. I especially enjoyed the dinner with the counterparts there because we sat with a school principal and his wife. I learned a great deal about the New Zealand system of education. Dave had a very good conversation with the general manager of a large farmers' co-op in that area.

We'll never forget how great it was to feel the warm breezes blowing as we stood on the wagon and rode leisurely over the John Gallagher sheep station "Rukahuri" and saw how he took care of his 4,000 ewes, hoggets, and rams. We were heartened by John's positive attitude toward "his one-man farm operation". He took such pride in carrying on the best of their previous family traditions and in using the best research and knowledge he could find to improve his operations.

We really enjoyed our stay on the North Island. The Inn was a perfect resting place. Outside our room were tropical trees and shrubs Beyond was a lovely swimming pool. We were not far from downtown. We shopped in a real consumer-owned co-op grocery store. We felt much at home with labels similar to those at home.

Further downtown, we bought a variety of their stamps at the post office The man that waited on us seemed to be glad for "our attitude" toward New Zealand "I'm so glad to meet people from the U.S who know something about New Zealand and want to know more Some foreigners come here, and they think we live in grass huts," he said.

We had a good time buying white sheepskin rugs here for members of our families.

Massey University is one of the most outstanding educational institutions in the southern hemisphere. They have eight "faculties" or colleges: Agriculture and Herd Science, Technology and Food Science, Veterinary Science, Science, Social Science, Humanities, Education, and Business Studies They have 4,780 full and part-time students and 6,100 students enrolled in correspondence courses We learned a great deal about New Zealand agriculture here. New Zealand has more than 60 million sheep and almost 9 million cattle It has about 25 times as [illegible] farm animals as people (The NZ population is 3,183,000. It is about the size of Colorado – three per cent as large as the U.S., excluding Alaska and Hawaii). Dairy products account for a large share of the nation's income. Barley, corn, oats, and wheat are the chief grain crops. They grow large quantities of apples and pears. The dairy industry is controlled by the New Zealand Dairy Board. This body exercises stringent control over the farmers. It tells them how much milk to produce and how much butterfat to have.

The next day we visited Milk Processors Ltd. and a dairy farm. The farmer was quite knowledgeable. He seemed to enjoy talking to Dave and asking him questons, especially at the counterpart dinner that night.

We visited the Awahuri Breeding Centre. Dave felt quite at home with these men. They know about Kingpin and Elevation over there, too. Their AI service began in 1950. One-half of the dairy farmers use AI. They are now seeing an upsurge of Friesian (Holstein) cattle. Before that, Jersey and Guernsey were predominent. Now Friesians account for 54 per cent; Jerseys; 45 per cent. All of the cows are on the computer. They have a sire-proving program. It costs only $2.00 to breed a cow. They pay $400 for the bulls they buy for the stud.

Rotorua, on the North Island, was a "fun place", a "tourist paradise". One of the biggest things that our stay here did for us was to greatly increase our interest in Maori history, traditions, life, customs, education and religion. The Maoris are truly a great people who came to New Zealand 600 years ago (or earlier). They art combining with the Europeans who came in the last 100 years to make a rich culture and a noteworthy people.

As soon as we arrived at this unique spot, we immediately donned our bathing suits and went into the warm, thermal hotel pool. It was a beautiful feeling to float and swim in this naturally warm water with water dripping down a small waterfall into the pool. Steam was seen coming up from the thermal basins around the countryside.

The next day we visited the Whakarewarewa Thermal Reserve. A special Maori guide showed us the work of the apprentice Maori carvers at The New Zealand Maori Arts and Crafts Institute. We were amazed at their artistic ability and the precision of their work. Our guide demonstrated the making of a grass skirt from the native plant. The Maoris are an intelligent and religious people. We saw eveidence of this all around. They made handsome wood carvings, jewelry from native shells, and religious carvings for their meeting houses.

The guide then took us on a tour of an ancient Maori village. There we saw primitive houses, meeting houses, store places, and other evidences of their ancient culture. From there, we visited the Thermal Reserve. As we hiked by the geysers, the thermal pools, and the mud pots, we were reminded of our own Yellowstone National Park. Pohutu Geyser is similar to our Old Faithful.

We walked through the Rainbow Trout Springs where brown and rainbow trout swam in crystal clear water. We saw many of New Zealand's native birds and animals. The trees and shrubbery there are some of the most beautiful we have ever seen. We had a barbeque lunch at Hamurana Springs beside a lovely stream. We watched the ducks and sought shade from the hot Summer sun.

We then went to an Agrodome Show where 19 of the top breeds of New Zealand sheep were on display. Their places in the New Zealand economy were described.

The experience of the evening was the highlight of our stay in Rotorua. We had a delicious and abundant buffet dinner of Maori foods, including roast lamb, beef, and chicken, kumaras (sweet potatoes), and dozens of other native fruits, vegetables, salads, desserts, etc. We watched the preparation of the roast lamb before dinner in one of the "hot springs" adjacent to the hotel. The cooks had placed the meat in the natural boiling water, had

(Turn to Page 65)

Perry County dairy farm couple

(Continued from Page 64)

covered it, and then removed it and took it to the hotel dining room.

After the meal, the Maori Cultural Theatre Group gave us a fascinating entertainment of Maori songs and dances, including the stick dance. The Maori men stuck their tongues out and rolled their eyes as flirtation gestures. The Maori songs got us all "in motion".

We will never forget our time of fine fellowship and inspiration in the home of Clive and Audrey Hanna and their children Susan, Paul, David, and Jacqui. We enjoyed the fellowship with the many friends who shared the time with us in real "People-to-People" fashion. Dave found himself surrounded by dairy farmers. Turepo talked at length to him about Friesian cattle. Dairymen in New Zealand get only $2.50 per hundred for their milk. This low price for milk causes them concern as they try to improve their efficiency and make use of research. These farmers were very glad to share their concerns with Dave and get information from him on the dairy industry in the U.S., especially in Pennsylvania. We gathered around the piano and sang familiar hymns before we left.

The visit to the David Wallace dairy farm had special meaning for us. David gave us more detailed information about the NZ dairy industry. He has two Friesian herds and one Jersey herd. Four years ago he had only 120 cows; now he has 550. They export dairy animals to Fiji in an effort to improve the herds there. These were mostly cross-bred animals, a mixture of Friesian and Brahman.

One of the most interesting experiences of our entire trip was our homestay at the home of Dick and Mary Sherlock Ngaruawahia, New Zealand.

The Sherlocks bought their station of 1640 acres acres 32 years ago, and paid $10 an acre for it. They had about 5,000 sheep, 600 beef cattle, 5 sheep dogs, several horses, and a few other animals.

We decided to take a walk over parts of the farm. We viewed some of the sheep and cattle, places where they washed the sheep, and the wool barn where they sheared the sheep and stored the wool. Then we saw several nice horses. We walked on to the very top of the highest hill. There we saw the Tasman Sea to the west and miles and miles of New Zealand countryside to the east, a breath-taking view. We then hiked down through the pastures to a very deep ravine; palm trees and shrubbery grew there.

Mary prepared a delicious dinner of roast hogget (a 1-year old lamb), sweet potatoes, green beans, salads, rolls, butter, jam, dessert, and tea.

Mary was a master weaver. She had grown the flax, spun the thread, and then wove all of the materials which covered her antique furniture. She had also woven the draperies and her daughter's wedding dress. Their home had rare objects and a large library gathered from their families and from their travels. A very high and long china closet and cupboard held hundreds of family heirlooms: china, glass and silver. It was made of kauri wood.

Breakfast consisted of porridge (cooked ground wheat cereal), poached eggs, bacon, pineapple, orange juice, tea or coffee.

After breakfast, the men went to the fields. They watched eagerly as two men changed 1500 sheep from one paddock to another. Then they changed about 250 cattle. The animals would graze on one paddock for two or three days and then be moved to another of their 50 pasture fields. There was plenty of water.

These are but a few of the general impressions that we had from our trip to the South Pacific. It was a true People-to-People experience which certainly helped us to understand each other better. We treasure the friends we have made and the insights we have gained. As the late President Eisenhower said, "Our hopes, aims and goals will be reached sooner than any of us anticipated and truly 'Understanding Between People will be the Passport to Peace'."

Sows, boars to be identified

WASHINGTON, D.C. – Sows and boars shipped across state lines for slaughter must be identified by tattoos or tags after the date of May 22, F.J. Mulhern, an official of the U.S. Department of Agriculture (USDA) said recently.

The effective date of the regulations was originally March 23, but it was postponed until May 22 to give certain markets additional time to prepare to carry out the identification requirement, Dr. Mulhern, administrator of USDA's Animal and Plant Health Inspection Service said.

The regulation requires all sows and boars over six months of age being shipped across state lines for slaughter, to be identified to their herd of origin by tatoos or approved tags. These animals will be tested for brucellosis at slaughter and the identification will be used to trace those that are infected back to the original owner.

When the infected herd is found, arrangements will be made with the owner to test the herd – without charge – and to free it of brucellosis. Indemnity can be paid on infected swine that are destroyed at a rate of $25 for purebreds and $10 for other breeding animals.

More than 1.2 million swine were tested for brucellosis at slaughter last year. Of these, one million were in four midwestern states – Iowa, Minnesota, South Dakota and Wisconsin. These four have state identification regulations and have already attained validated burcellosis-free status.

Handicapped 4-H'ers learn food preparation

By JOYCE BUPP
Staff Correspondent

YORK – The national 4-H program has matured from the small rural organization founded many years ago to a modern voluntary system of education that offers training in an almost unlimited variety of project areas.

In keeping with the policies of broadening 4-H horizons to all who need and want to learn, York Extension 4-H specialist, Roxanne Price, laid the groundwork this Spring for the county's first handicapped 4-H club.

She had seen the handicapped 4-H program working in other counties, and Mrs. Price felt there was a need to make it available in the York area. Several active 4-H teens and adults offered to serve as leaders for the new club and invitations to join went out among the surrounding communities.

The response was enthusiastic, and early in May the first meeting was held in the kitchens of the 4-H Center.

"Tasty Snacks" was the initial project selected for the eleven handicapped members, who represent areas of the county and city.

Quick, nutritious food items are prepared and served at each weekly meeting. Members all take part in the mixing and cooking of the snack-type foods, with the program designed to teach each one how to provide himself with a fast, easy-to-fix lunch.

During this past week's meeting, toasted cheese sandwiches and a tossed green salad were on the menu. Other favorites from the project recipes include cookies and brownies, homemade ice cream, and a variety of other sandwich combinations.

Table setting and nutrition information are also taught within the course and a period of recreation is a regular part of the meetings. The success of this first project and the interest shown by the members and their families already have leaders looking ahead to the next project.

"We're trying to avoid strictly a 'crafts' type project," Roxanne relates, "because so many other groups work with the handicapped in that field. Parents of the members say that this is the first real opportunity they've had to learn useful, self-help skills in an organized setting."

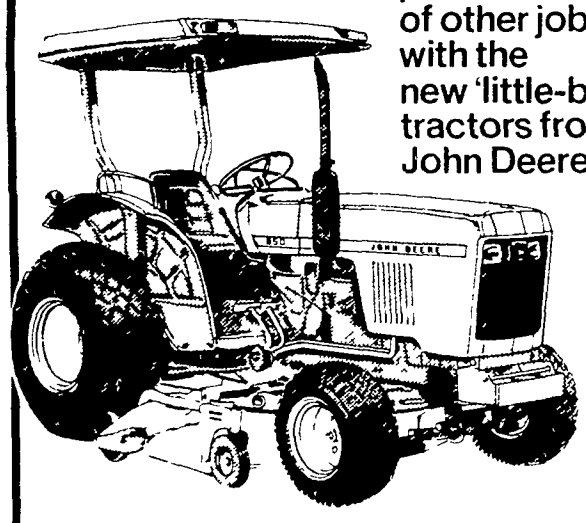
Age of the members ranges from nine to 32. Very affectionate and friendly with one another and with their leaders, they joke with and tease each other as they work. Older members help the younger ones, reinforcing their sense of accomplishment. Some have had previous experience

(Turn to Page 67)

Ready to taste test the final results are, from left: Beverly Jamison, Rodney Wire, teen leader Charla Janney, Ernest Jamison, Jr., Linda Zerbe, Ernestine Jamison, Melissa Ferree, and Jeff Ausherman.

Groundskeepers, Nurserymen, Landscapers...

Now you can mow, till, landscape... perform dozens of other jobs with the new 'little-big' tractors from John Deere



Introducing the new 22- and 27-PTO-hp diesels with big-tractor features, small tractor prices

The new John Deere 850 and 950 Tractors are an invaluable addition to any operation. Powered by hard-working 3-cylinder diesel engines (22 PTO horsepower on the 850, 27 PTO horsepower on the 950), these tractors are priced so economically that you can own a new one for about the same as a comparably equipped used tractor.

These full-service tractors are built with many of the same features you'd expect in tractors twice their size. Category 1 3-point hitch, 8-speed Hi-Lo transmission, 540-rpm PTO, differential lock, hand and foot-operated throttle controls, adjustable wheel tread. The list goes on and on.

And there's a variety of implements available, including four different types of mowers, posthole digger, rear blade, box scraper, rear blade, and front loader. See us soon for a demonstration. The all-new 850 and 950 Tractors from John Deere.

working with food preparations in the kitchen, but for others, it's a brand new opportunity.

"Working with the club has been very rewarding for all of us," smiles Roxanne. "Sometimes it's difficult to know if we're getting through to the members with the lessons; but then, that's a problem we face in all of the clubs."

The Extension staff is especially proud of the enthusiasm and dedication of the youth and adult leaders of the club. Project teachers and assistants are Christy Waltersdorff, Charla Janney, Brooke Palmer, Jonathan Myers, Bonnie Wire, Judy Waltersdorff, and Mrs. Emilie Welsh.

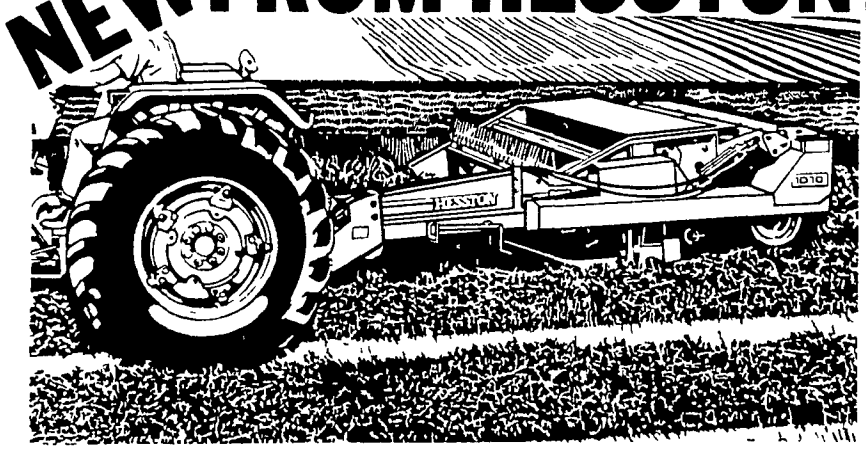
Some homeowners waste water in the warm season because they water and cut lawns too frequently Water the lawn only in the evening and do not overwater Cut the lawn less frequently The extra growth will hold moisture

NEW FROM HESSTON!



New design and low investment make the Hesston Model 1070 and 1090 Mower-Conditioners ideal for many operations.

Designed with strong, powerful lines, this husky workhorse is built to handle tough jobs. Its large-diameter chain-driven reel is cam-actuated to reach down, pick up and feed crops positively to the conditioner. The conditioner rolls feature non-intermeshing, deep-spiraled fluting for aggressive conditioning without mangling or shredding. You get Hesstonized Hay with all the nutrients preserved.

All 4WD tractors are not created equal

Steiger delivers more of the horsepower you pay for.

Fact is, one company s 4WD tractors consistently transfer more engine horsepower to the drawbar — where you need it — than the others And they do it better and more efficiently **Namely, Steiger**

In recent independent tests, Steiger 4WD tractors delivered the highest percentage of engine horsepower to the drawbar pin By comparing each model s advertised gross engine horsepower to the highest drawbar horsepower attained in the tests, Steiger tractors placed above all others Steigers delivered an average 84 08% of the engine's power to the drawbar pin The competition averaged only 75 81%

So if you ve been shopping for a four-wheel drive tractor, don t just shop for horsepower in the engine Check the power where it counts at the drawbar See if you don t agree Steigers work harder

STEIGER *Get more tractor!*

WANTED:
tractor dealers to make and sell profit!

Case Franchises Available In The Reading & Everett, Pa Areas

When you're selling farm machinery, your customers rightfully demand products that will turn them a profit And being a businessman, you in turn expect a profit from your services

You both profit with a Case tractor franchise As a Tractor Specialist, you will sell 14 sizes of farm tractors and a line of heavy-duty tillage tools Period You needn't scatter your selling power over the full range of farm machinery Your service shop is expert on one commodity farm power Your parts inventory is cleaner and more financially manageable Your used equipment lot consists largely of faster moving used tractors

Light construction power too if the Case utility tractor franchise is available in your territory Call or write us We'll be glad to outline the full potential of a Case franchise in your area

It's Time To Think Haylage Treatment

Ensil-ate™

Developed by

MASTER MIX RESEARCH

The Silage Preservative With A Real Difference

WHAT IS IT?

$1 invested for ENSIL-ATE per ton can return $3 per ton in added feeding value

ENSIL-ATE is a silage additive designed to

- Reduce Rancidity
- Prevent Oxidation and Over-Heating
- Inhibit Mold Growth
- Increase Palatability of any Ensilage

ENSIL-ATE has its own feed value!

- Protein 11 percent - Fat 2 percent - Fiber 35 percent

ENSIL-ATE adds highly digestible protein and fiber in the form of ground soybran flakes.

ENSIL-ATE prevents initial run off.

- 10 lbs. of Ensil-Ate will absorb 40 lbs. water.

ENSIL-ATE is perfectly safe to use and contains only all-natural proteins.

ENSIL-ATE is backed by leading experimental stations as well as Master Mix Research.

HOW IS IT USED?

ENSIL-ATE requires no additional equipment.

It should be added to your silage at the rate of 10 lbs. per ton. Packaged in 50 lb. paper sacks, each bag will effectively treat 5 tons of silage. Simply spread the bag on the silage wagon before or during filling.

REMEMBER -

You can mix 10 lbs./ton easier and more thoroughly than 1 lb./ton of silage that most additives require.
ENSIL-ATE can also be added as the silo is being filled.

FOR MORE DETAILS ON HOW YOU CAN GET AN AVERAGE ADDED RETURN OF $3 FOR EVERY TON OF HAYLAGE YOU PUT UP THIS SPRING, CALL OR VISIT YOUR

MASTER MIX DEALER TODAY!

YOU'LL BE GLAD YOU DID!

Cumberland County DHIA Monthly Report

APRIL 1978

Cumberland County Dairy Herd Improvement records show that 6325 cows in 113 herds were on production testing in April according to Duane G. Duncan, county agent. Of the 92 herds on DHIA, 60 herds had an average fat production of 150 pounds per cow per day for the month. During the month 84 cows completed their 305 day lactation with 600 pounds of butterfat. DHIA supervisors working with the dairymen to improve efficiency include Mr. Harold Boldosser, 130 Old Gap Road, Carlisle; Mrs. Diane M. Cain, Newville R3; Jay Zeigler, Carlisle R1; and Scot Foreman, Mechanicsburg R1.

New slant for fast silo filling

The International 56 blower fills tall silos faster because its auger feed is slanted 45° to the blower rather than the conventional 90° feed Material moves directly, faster to the high speed blower You get high-capacity—up to 70 ton per hour of haylage—and use less power to boot Get the 56 blower for fast, economical silo filling

- Big 56-in rotor has 6 adjustable, replaceable paddles for top capacity and long life
- Rotor easily serviced because the hinged outlet swings clear
- Transport wheels adjust for clearance, leveling and height
- For tractors with 35 PTO hp and up

Exhibits of yesteryear

There was always work to be done on the farm

By KENDACE BORRY

LANCASTER – "Running a farm meant hard, unrelenting work..." starts the sign that explains the new exhibit at the Pennsylvania Farm Museum at Landis Valley. The displays, centered in a barn at the museum grounds, are to portray a farm family at work prior to the 1900's.

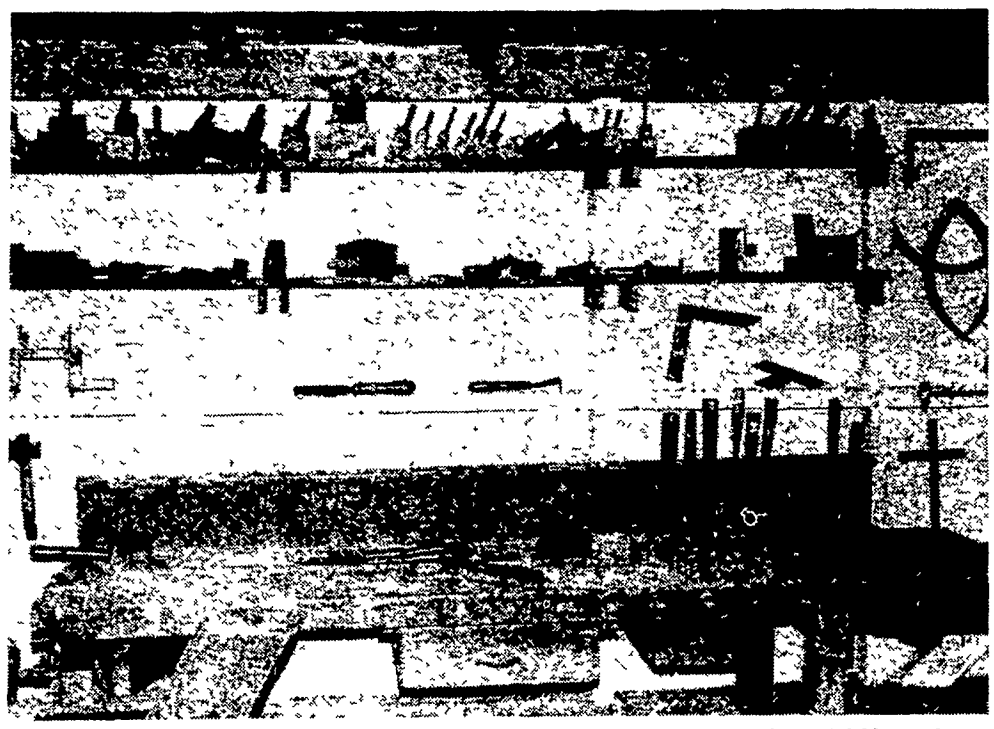
According to John Brooks, curator of crafts and education at the museum, the exhibit was made to show what "country people" did in the 18th and 19th century. The barn is divided into seven different areas, with each section dealing with a display showing one of the functional jobs farming families dealt with.

A large area deals with woodworking. Brooks remarked that wood was the most abundant natural resource other than soil that was available to the farmer.

"Wood was put to quite a lot of uses," he explained. "Each farm had its own woodlot and farmers were heavily dependent on it."

Besides the carpenters, there was work for fence post makers, cabinet makers, coopers, and wheelrights, to name a few of the occupations involving the use of wood. Also some farmers would peel bark from trees and sell it to tanneries.

In the wood corner of the exhibit, visitors can see a wide variety of the tools used to turn the wood into a useful product. There is a froe, broad ax, a variety of saws, a drawknife, augers, planes, and a tredle lathe. All look as if the carpenter has simply walked away from his workbench for a moment and will shortly return to work.



A variety of tools are on view at the wood bench. Prior to the 1900's, a lot of the woodwork was done on the farm.

Another display deals with basketry, with baskets taken from the Landis Valley Museum collection. Making baskets was a Winter activity on the farm, when the outside work was reduced. The woven containers could be made from wood splits, willow branches, and rye straw. They were used on the farm or sold to add to the farm income.

A third area in the display is devoted to home produced lighting prior to the 1840's. Consisting mostly of candles, Brooks told that the smokey lights were made mostly of tallow from beef and sheep. There were also some fat lamps used. Candlemaking was done after the Fall butchering.

Then comes the dairy exhibit. Almost all the farms then had a few dairy animals, but fresh milk was not readily marketable. So the farmers made the milk into butter and cheese and sold it to their neighbors or took it to town. It became a tradition for the farm women to be in charge of the dairy, from milking the cows to making the butter and cheese products.

One interesting point of note about the dairying operation is that each woman who made butter marked it with her own distinctive, identifying butter design, so that all would know which was her butter.

"Very few people could read in those days," Brooks explained. "Instead of reading a label on the butter, people would look for the design stamped on the butter of their choice."

According to Brooks, there was no question that farmers were in the business to make money, not content to be simply self-sufficient and stay at home.

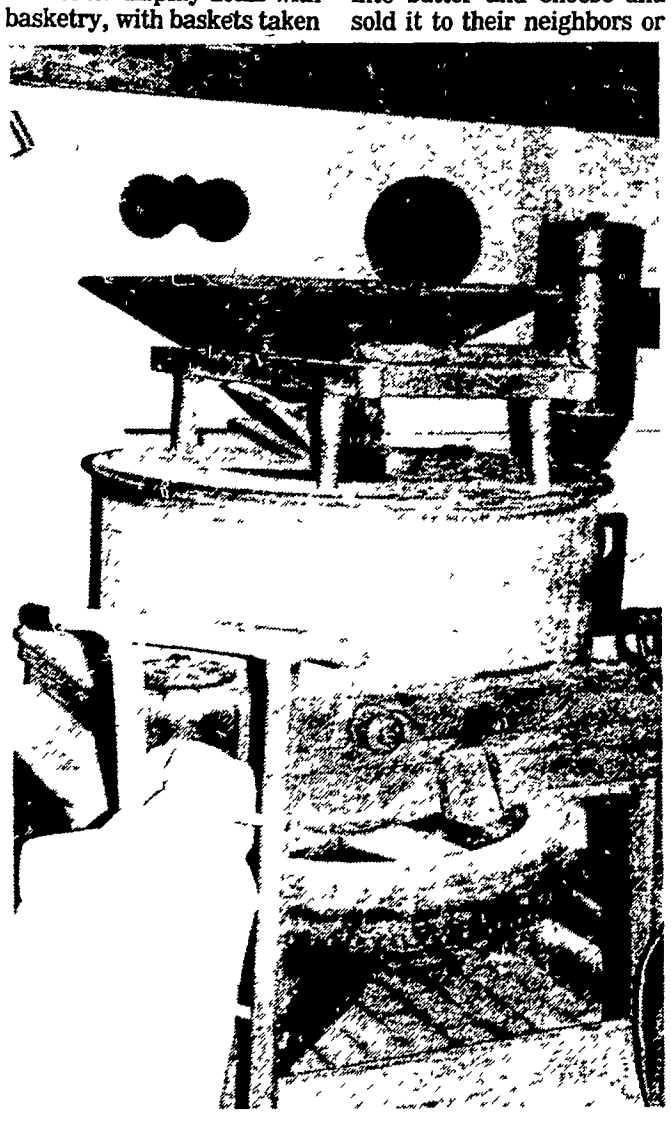
"People sometimes think that farmers just stayed at home and supported themselves and their families," Brooks related. "But that wasn't true. Farmers supplemented their income in many ways and made money through various markets."

Brooks believes that an average farm in the 18th century had about four or five cows, and three to four horses.

Before the mid 1800's, grain was the most important crop in the area. In fact, this farmland was the leading grain producing area until 1840. Then as the western farmland opened up, and more land became farmed in the midwest, Pa. lost its importance in the grain market.

The grain display at Landis Valley shows the primitive shovels used in grain farming and the more advanced threshing machines used later. When the time came that the grain was taken to the mills to be grinded into feed and flour, mills sprouted up all over

(Turn to Page 103)



Complete with a small grinding mill, the grain exhibit testifies the importance that grain held in the 1800's.

The tools of the tobacco trade in the 1870's sit and wait as if they will be used shortly. To make the exhibit more authentic, some tobacco has been hung to dry.

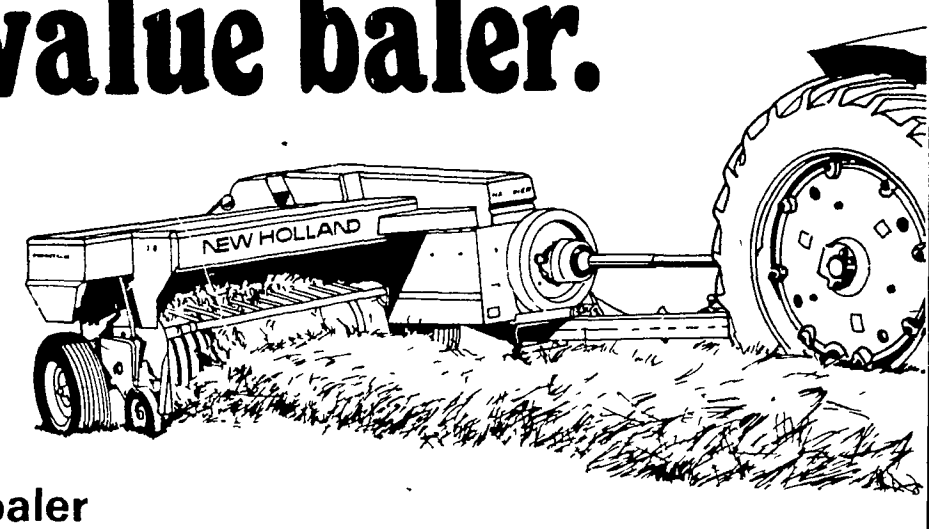
A new standard of excellence.

Just try to find a better-value baler.



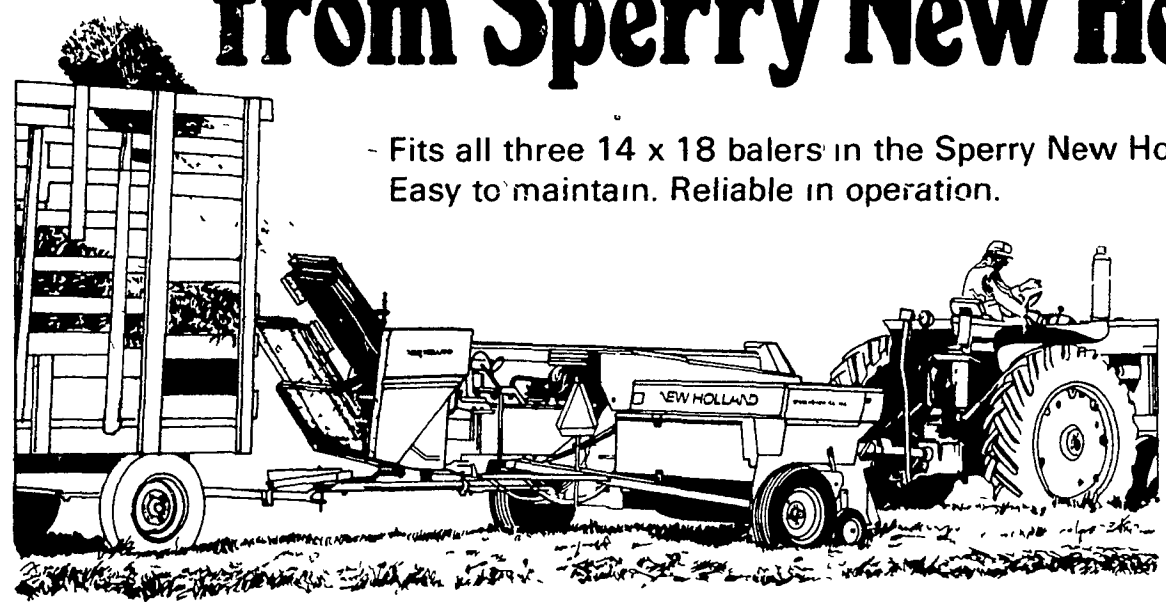
It's NEW! The Sperry New Holland Model 310 baler.

The Model 310 replaces the world's most popular baler — the Model 273 The 310 runs smoother, quieter, with more capacity. PLUS you get Sperry New Holland reliability

Stop in today and see this new baler

Your authorized SPERRY NEW HOLLAND dealer.

See the new Model 70 bale thrower from Sperry New Holland.



- Fits all three 14 x 18 balers in the Sperry New Holland line. Easy to maintain. Reliable in operation.

And . . . it swings up, out of the way for easy access to bale chamber, or to drop bales directly on the ground.

Your authorized SPERRY NEW HOLLAND dealer.

Stop in today and ask for a demonstration. You will be pleased to see how a Sperry New Holland baler and bale thrower will speed up your haymaking.

Trust your equipment to the experts listed on the opposite page . . .
They sell the best — Sperry New Holland. And they back their machines with a "we service what we sell" policy. Their Service Department is staffed by men with experience and training. Let them show you how they can serve you better!

SPERRY NEW HOLLAND

New ag export trade council formed

HARRISBURG – State Agriculture Secretary Kent D. Shelhamer recently announced that he has initiated the formation of the Pennsylvania Agricultural Foreign Trade Council.

The Council will work to develop, promote, and introduce Pennsylvania's agricultural products to foreign export marketing. Shelhamer said that the Council will include both established and beginner exporters, as well as those who are interested in entering the export field.

Shelhamer noted that the export problems facing agriculture are unique, specialized, and quite different from those of commercial and manufacturing firms. "Our overseas contacts are with agricultural attaches, and we maintain very close relationships with the Foreign Agricultural Service of the United States Department of Agriculture.

"Special areas of regulations govern agricultural exports, both within the United States and in foreign countries. These regulations involve health regulations, label clearance, disease control, taste testing, and quotas. Agricultural products also require special packaging, handling, and transportation," he said.

Shelhamer said, "The very special needs of our agricultural exporters have made the formation of the Pennsylvania Agricultural Foreign Trade Council a necessity. Through the Pennsylvania Department of Agriculture's expertise with the specialization and unique requirements of agricultural exporting, the Council will serve Pennsylvania's agricultural marketers most effectively in the area of international trade.

He noted that the international trade balance has an important effect on the strength of the American dollar, and added, "Agricultural exports during the last fiscal year, contributed $10.6 billion trade surplus with total exports of $24.0 billion. This helped to offset the $30 billion deficit trade balance in the non-agricultural export market."

Shelhamer said the Council will work to educate, encourage, advise and assist the farmers of Pennsylvania in understanding the benefits of international marketing.

He pointed out that many people do not realize the great diversity of agricultural products which are available in Pennsylvania for marketing. These products include fruits, vegetables, meats and meat products, poultry, eggs, dairy products, live animals and birds, grains, cereals, feeds, pet foods, reptiles, game birds, lumber, macaroni, spaghetti and pasta products, candy and confectionery products, maple products, spices and herbs, natural vitamins, trace minerals, nursery products, hides, frozen semen, alfalfa, honey beeswax, flours, starches, snack foods, nuts, hay bees, animal organs for pharmaceuticals and medicine. Shelhamer said that many of these products can be exported fresh, frozen, canned, dehydrated and dry, adding the list was "just a sample and by no means complete."

What's In A Name?

The newlywed was pleased to hear her husband call her an angel "Why are you calling me an angel?" she asked "Because," he replied, "you're always up in the air, you're continually harping on something and you never have a thing to wear"

There was always work

(Continued from Page 100)

streams in the area. Millers were paid by a toll, a share of the grain they processed.

Wheat is believed to have been the root of the prosperity of the area. It was sold primarily overseas. Also raised was corn, rye, barley, oats, spelt, buckwheat, and maize.

As the competition in the grain market increased during the 1850's, farmers looked for another crop which would be more profitable to raise. Tobacco became increasingly popular and by 1879, Pa. was ranked third in the nation in growing that crop.

The making of cigars was both a cottage industry and a factory job, as cigars were both made at home and manufactured. The tobacco was harvested by hand and air dried in barns.

Such instruments as a baling press, lathe puller, leaf-smoother, and a shredder or stem separater can all be viewed in the tobacco area of the exhibit.

The final display deals with livestock and butchering. Most farms would keep a combination of horses, cattle, swine, sheep, and poultry, and the animals would be multi-purpose. Pork was the most important meat of the diet, with people eating twice as much pork as beef.

The butchering display features utensils used including, ladles and forks. Also a huge black kettle can be seen along with a tripod with three hooks to hang the butchered animals on, meat choppers, scalding trough, and hog bier.

In the center of the barn filled with the exhibits there is a special area set aside for temporary and demonstrations. Here special displays will be set up.

The "Farm Family at Work" exhibit is now open to the public and can be toured anytime the museum is open.

The Pa. Farm Museum also notes that their 23rd annual Craft Days festival is coming up on June 17 and 18. The festival will feature more than 40 live demonstrations of crafts and skills practiced in early rural Pennsylvania. The activities are planned from noon to 5 p.m. on both days.

Butter molds can be seen on the wall at the dairy exhibit while a barrel butter churn waits to be cranked.

John Deere Tractors 40, 50, 60, 70, 80 hp

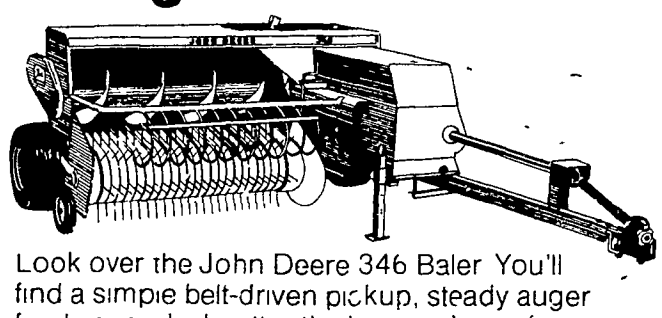
High-torque diesel engine

High torque—some folks call it lugging ability These John Deere Tractors feature high-torque diesel engines—engines that offer excellent torque reserve for plowing sticky gumbo baling in hilly hayfields, shredding dense crop residue, or other jobs that could stall other tractors

These heavy-duty John Deere-designed-and-built diesel engines deliver the torque you need to stay on the move through those tough spots with little hesitation or need to downshift

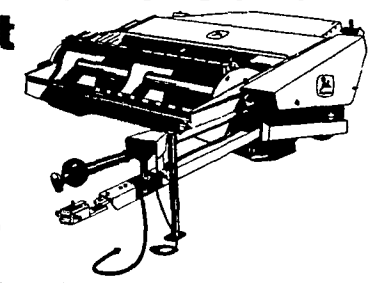
Stop in soon for more information on these John Deere Tractors with dependable 3-, 4-, and 6-cylinder diesel engines Engines with high torque—some folks call it performance

See the simple baler design that gives you years of dependable baling



Look over the John Deere 346 Baler You'll find a simple belt-driven pickup, steady auger feeding, and a knotter that's gear driven for quiet, long-running service Those are just some of the features that make the 346 a less complicated, more dependable baler. Stop by for your own guided tour

Tackle the toughest haying conditions and come out on top with a 9¼-foot cut 1209



Here's a mower/conditioner that s ideal when your crop and field conditions aren't The 1209 is fearless in the field because it's built strong to handle thick hay stands—yet nimble enough to float over rough terrain Come in and let us show you the features of the 1209—like adjustable guard angle, adjustable roll pressure, intermittent-cleat conditioner rolls—that will give you the upper hand this hay season

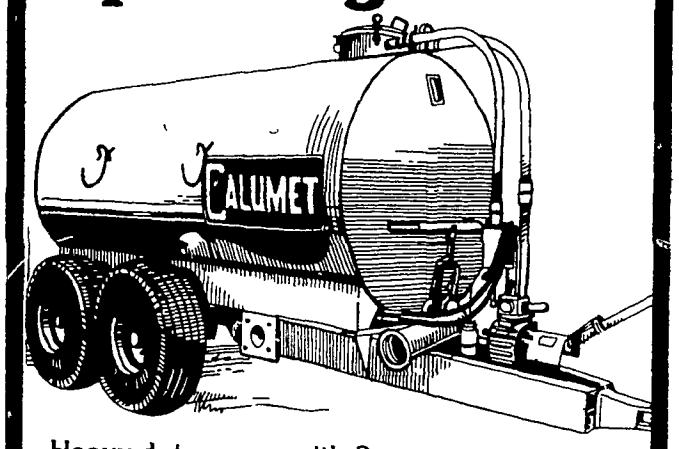
Drapery info given

UNIVERSITY PARK – A variety of factors influence your choice of drapery length – window position, ceiling height, fabric, drapery style, personal preference, and heating unit placement. Generally, say Penn State Extension home furnishings specialists, draperies are either sill length, apron length, or floor length.

In Penn State's correspondence course on Ways With Windows, directions are given for installing window hardware, selecting fabric, figuring yardage, and sewing curtains and draperies. In addition, ideas are given for creative treatments and suggestions for basic and problem windows.

If you plan to change window treatments in your home, send for this how-to-do-it course. Write "Windows," Box 5000, University Park, Pa. 16802. Make check for $4.50 payable to Penn State.

Fast fill trip saver for liquid manure spreading



Heavy duty pump with 3-vane rotor handles all types of liquid manure. Rugged construction—full length support skids. Epoxy coated interior and exterior. 1180, 1500, 2250 and 3250 gallon sizes. Twelve month warranty.

Higher food prices not farmers' fault

WOLF POINT, Mont. – "Livestock producers and other farmers should not be criticized for the higher prices that they're now receiving," Howard Hjort, director of economics, policy analysis, and budget for the U.S. Department of Agriculture told the Wolf Point Chamber of Commerce and Agriculture's Annual Livestock Show and Sale recently.

"People quickly forget that for the past three years, meat at the grocery store has been a bargain at the expense of the U.S. livestock producer. Many people do not know what's happened to the livestock industry since the 1975 record inventory of 132 million head. In 1976, the inventory dropped to 127.9 million; in 1977, it decreased again to 122.8 million. As of Jan 1, the cattle inventory was only 116 million head. Next January, the inventory will be even lower." Hjort said, adding:

"At the same time, prices received by farmers for their beef averaged $32.30 per hundredweight in 1975, $33.70 per hundredweight in 1976, and $34.50 per hundredweight in 1977.

"This record decline in inventory kept meat prices low, even though livestock producers have paid sharply higher prices for feed, fuel, machinery, and other inputs. And, if you add the severe droughts in the West and Southeast, producers had a doubly hard time. Comparing only cash out-of-pocket production costs of about $40 per hundredweight for feeder cattle, the cow/calf operator and the commercial feeder in the Great Plains both have lost from $5 to $10 per hundredweight since 1975. It was not until early this year that prices rose above $40 a hundred.

"As a result of this severe imbalance between production costs and prices received by producers, we've had the sharpest decline in cattle inventory in history."

Hjort explained that there will likely be lower beef supplies for the next few years. "It appears that 1978 production will be about three per cent less than 1977's 25 billion pounds, with more fed beef supplies and lower nonfed beef slaughter. Prices in coming months and years are going to increase further, as a result of lower supplies, and the reasons this will happen must be understood by the consuming public and the government.

"The prices that farmers are now getting are essential to cover rising feed costs, the losses incurred in the last three years, and herd replacement. Prices will likely have to continue to rise to reverse the liquidation cycle.

"Food costs are likely to average six to eight per cent higher in 1977. Ten per cent of this increase will be the result of imported foods – sugar and coffee – and fish," Mr. Hjort stated.

"About half of the increase will be the result of increases in the farm value of food, while about 40 per cent of the overall increase will be because of increased marketing costs – wages and executive salaries, packaging, and transportation.

"For the second consecutive year, the wages and executive salaries component – the labor bill – of these marketing costs after the food leaves the farm will exceed the total farm value of that food. For 1978, we're forecasting that the increase in the farm value of food will be about $4 billion, the first significant gain in farm prices since 1974. Nonfarm marketing costs will double this amount and add about $9 billion to retail food costs this year.

"Even though American consumers will probably pay over $190 billion for food in 1978, the farmers' share of the food dollar will be only 32 cents. The marketing costs for food after it leaves the farm gate will exceed $130 billion – that's 68 cents of each food dollar.

"I think everyone should recognize that increased prices to livestock producers make only a small contribution to rising retail food costs. The food industry is highly complex, and within that industry, livestock producers have been the real losers for the past three years, not the big winners. They should not become the scapegoat today," Hjort concluded.

4-H lamb club meets

RED LION – The May meeting of the York County Lamb Club was held at the Home of Donald Flory near Red Lion.

Fair exhibits were discussed along with ideas for the York County Roundup which is scheduled for August 18 and 19. The lamb club will be represented by an exhibit at this event, held at the York Fairgrounds.

The tour for the club is scheduled for June 3. The bus will leave Red Lion at 6:45 a.m., Queensgate at 7 a.m., going to Penn State Main Campus. Judging, evaluating, and demonstrations on wool spinning and sheep dogs are all part of the day's planned activities.

Next meeting will be June 1, at 6:30 p.m. at the home of Ebersole's. Blocking and grooming will be demonstrated.

Farming . . .

It's Nurtured the Good Earth of Our America

★

Let's remember the part farming has played and still does in the development of the United States. It has provided us with the essentials to achieve what we have today. By providing food for our millions . . . natural fibers for our clothing . . . jobs for many of our people. Let's practice conservation to preserve this land that has given us life.

Auctioneer championship coming

KANSAS CITY, MO. – The top livestock auctioneers from the United States and Canada will be in good voice June 17 at Marshall, Mo., for the 15th Annual World Livestock Auctioneer Championship.

The world champion will be named following competition at the Four Square Livestock Market. Marshall is about 60 miles east of Kansas City.

"This year's location in the heart of America should produce a record number of championship entrants," said Gerald D. Nevins, contest coordinator. Last year's 53 entrants set the current record.

The championship is sponsored annually by Livestock Marketing Association, Kansas City, Mo., and conducted by Livestock Market Digest, Inc., to focus attention on the professional role of the auctioneer in livestock marketing.

Last year's winner was Bobby Russell, Canton, Miss., who won the title in Calgary, Alberta. He heads the advisory committee of 14 previous world champions who will assist in conducting this year's competition.

A reserve world champion and a runner-up world champion will also be selected, along with champions, reserve champions and runner-up champions from the east, central and western regions of North America.

Trophies and merchandise prizes will be awarded to the winners.

The auctioneers are judged by a panel of livestock market owners and managers on the criteria they look for when hiring an auctioneer. The judges' votes are counted by an official of the National Auctioneer's Association, a livestock news media representative and a certified public accountant.

The contestants will merchandise cattle consigned to the Showcase Cattle Sale, arranged especially for the event. Showcase Feeder Calf Sale, featuring feeder calves from herds enrolled in the Four Square Market's cow-calf program. The contest begins at noon and is open to the public.

The entry fee is $150 and contestans may be sponsored, Nevins said. Further information and entry blanks may be obtained by contacting the Digest, 4900 Oak Street, Kansas City, Mo., 64112.

Dairy princess contestants needed

FLEMINGTON, N.J. – The annual search is on for a young lady to represent Hunterdon County, N.J. as dairy princess, according to Mrs. Marie Schwab, Ringoes, chairman for the planning committee. Each year the contest is held in June.

The new princess will reign for a year. She will make numerous appearances in promoting milk and dairy products in malls, shopping centers and schools. She will be asked to speak to service clubs and other community organizations, as well as attend many public functions.

As spokeswoman for the dairy interests in the county, she must exhibit a warm congenial personality, be out-going and enthusiastic in her efforts to meet people and to promote milk.

The contest is scheduled for June 13, at the Amwell Valley Firehouse, Ringoes. All arrangements for the contest have been made. Contestants are now needed.

Young ladies interested in entering must be 17 to 24 years of age, single, be a high school graduate and have some dairy farm background.

The Hunterdon winner and runner-up in the contest will represent Hunterdon in the State Dairy Princess Contest scheduled during Flemington Fair Week.

Anyone interested should contact the Extension Service Office. Hunterdon County Extension Center, Route 31, north of Flemington, or call 201-788-1339, for details and an entry form.

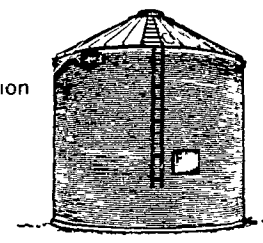
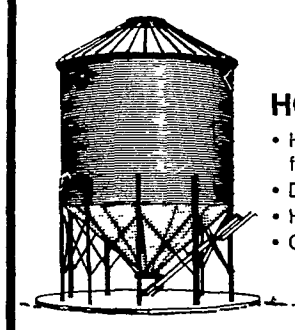
With Stormor Your Grain Never Had It So Good!

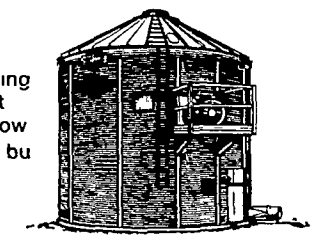
GRAIN BINS
- Heavy-gauge steel construction
- Vac-U-Vent ventilation
- Weathertight seals
- Capacities to 152 000 bu





HOPPER TANKS
- Holds wet grain at harvest feed and supplement year-round
- Diameters from 6 to 18 ft
- Heights from 10'4 to 43'5'
- Capacities from 112 to 3 921 bu

EZEE-DRY
- The patented overhead drying floor uses all available heat to keep your drying costs low
- Drying capacities to 12 000 bu at 10 pts per hour
- In-bin storage capacities to 16,000 bu



Get the most out of your grain production. Let Stormor handle it! Come in today for a free estimate on the system that meets your needs.

Adams County magistrate rules

Starved cattle case not related to cruelty

ARENDTSVILLE - The Maryland businessman who owns 10 farms in Adams County has been found guilty of failing to dispose of dead animal carcasses properly but was acquitted last week of cruelty to animals charges.

At hearings held here earlier this month in the offices of Magistrate Harold R. Deardorff, James G. Angelaras of Silver Springs, Md. was ordered to pay $100 for each of three improperly disposed cattle carcasses. His total fine included $78 for court costs.

The hearing on May 10 lasted seven hours and brought to an end a series of complaints by Adams Countians who charged that Angelaras was failing to feed his cattle properly. The Pennsylvania State Police also became involved in the matter and filed charges of animal cruelty. Trooper Donald Blevins, who prosecuted the case, was unable to get a guilty verdict at the hearing, however.

Neighbors and concerned residents in the area had complained numerous times that Angelaras' cattle were starving and dead animals were subsequently left in the pasture. Magistrate Deardorff delivered his decision of guilty on May 15 but dismissed the cruelty to animals allegation two days later. No reason was given for dismissal of the latter charges.

The incidents which prompted the complaints and resulting hearings were given widespread publicity. The **Washington Post** devoted more than a half page to the story in its April 2 issue. It included pictures of a dead cow lying at the entrance to one of the Angelaras properties which reporter Barbara J. Katz described as "standing out from most of the tidy farms around them."

The Washington Post staff writer noted:

"On one farm a lone silo stands amidst the burnt remains of a barn and several smaller buildings. Barbed wire fence drags close to the ground, its supporting posts bent. On another farm, rotting equipment and a pile of old tires lie alongside dilapidated buildings."

Angelaras' operations had been under investigation by health and sanitation authorities from both Maryland and Pennsylvania because of the frequency of complaints received from neighbors and others in the area. Angelaras counters that their allegations are a form of harrassment.

The dead animals charges were brought against Angelaras by the Pennsylvania Department of Agriculture, with supporting testimony coming from several of Angelaras' neighbors. Specifically, Angelaras was charged with failing to properly dispose of dead cattle within the required 48 hours dictated by law.

Adverse weather conditions and the demands of another business hindered the immediate removal of animal carcasses, according to Angelaras who is a consulting architectural engineer. Showing his passport, Angelaras said he was in Kuwait and Saudi Arabia from Jan. 25 to Feb. 10 on business.

During this time heavy snow and freezing delayed the immediate removal of animal carcasses from his farm, he said.

He told the court he has a policy for the workers on his farms that dead animals are to be removed immediately. "The men are specifically instructed to call the dead wagon man immediately before they were to do anything else," he said. The "dead wagon" man is a disposal service in Woodsboro, Md.

Robert Brashears, who supervises the Angelaras dairy farm on Lower Tract Rd. in Fairfield R2 said he couldn't remember how many animals died there in 1977. "I didn't keep track of them. When I see them die, I call the dead wagon," he said. Brashears said he didn't keep records on the animals at the dairy farm.

Angelaras admitted he couldn't give an exact count of his animals. "I do not keep records of the number of animals. My accountant does," he said. "I don't even look at the records, because I am so busy with my consulting business," Angelaras said.

Donald Glacken, a former Angelaras employee who worked there until recently, told how heavy snow and freezing hampered feeding and carcass removal.

Dairy 4-H meeting held

EAST BERLIN – The Central Dairy 4-H Club met recently at the Bud Welsh farm, East Berlin R1. Pledges were led by Jonathan Myers and Joey Welsh.

Members are participating in a club poster contest for "June Is Dairy Month." The posters will be used in conjunction with the dairy exhibit at North Hanover Mall on June 16 and 17.

Dave Norman, Ass't. Co. Agri. Agent, spoke on "Raising a Dairy Calf into a Profitable Cow."

Tommy Welsh, tour committee chairman, reported on tour ideas. The members voted to tour a cheese plant and an ice cream plant near Laurel, Maryland in August.

The next meeting of the club will be on June 12 at the Donald Eyster farm, Spring Grove R4.

Berks County farmers tell how they have changed their tillage and planting methods

By LAUREL SCHAEFFER
Staff Correspondent

READING – Tillage and corn planting methods are progressively changing in Berks County. Many area farmers are setting aside conventional tillage practices for the more time and labor saving techniques of minimum tillage and no-till planting.

Chisel plowing has become increasingly popular over the last several years for corn production, because, as many farmers explained, it puts the soil in a better condition by leaving the previous crops' residue near the surface to protect the soil from erosion and drying out too quickly. As Robert Kopfer, Fleetwood R2, explained, "Leaving the crop residues near the surface keeps the ground softer on top. It acts as a sponge, retaining moisture that would otherwise be baked out by the sun."

"Plowed ground is more 'Cloddy,'" explained Lester Gelsinger, Wernersville, but the biggest return in chisel plowing is erosion control, he added. Reflecting on the past, Gelsinger noted the "old way" was to work the ground well before planting so it would need less cultivation, "but now you don't work the ground and don't cultivate it either." Rae Hix, Mohrsville said that when his sons first started chiseling on his farm in 1973, he thought the fields looked bad, and wanted to wait to see what grew before he would accept the practice. "Now I will never go back to moldboarding," he stated, "it costs too much."

Most of these farmers have not sold their moldboards however. The Hix's use a moldboard to plow down sod, but have chiseled hay fields after the first cutting, and have found it makes a good seedbed. "If you are going to chisel sod," remarked Hix's son John, "it should be done early." Harold Lesher, of Way-Har Farms, Bernville, also told Lancaster Farming that they have kept a moldboard plow, even though they have been no-tilling for the past five years.

"We moldboard our fields after they have been no-tilled for four years," Lesher explained, primarily to turn under small brush that may be starting to grow. This year they have turned under about 35 acres. Kopfer, however, has sold his moldboard plow, noting that he hasn't moldboarded in four years and hasn't had any problems. In fact he has been doing better. "Landsides and shins are too expensive," he commented.

Lester Gelsinger also keeps his moldboard for turning under sod only, commenting that he would not invest any money in a new one. The Gelsingers have tried no-tilling corn and have been pleased with their results. This year they will also no-till some corn during their later planting, in a field of rye after it has been taken off.

Kopfer has planted corn after only discing but believes he will stay with chisel plowing unless he finds he doesn't have the time in the future. Kopfer has no-tilled barley and soybeans however, and has been very satisfied with his results.

Kopfer has been using a plain chisel plow with curved teeth but feels he may try using one that has a row of discs in the front. After chiseling, the ground is gone over with an off-set disc and then planted with a no-till air planter. This is the third season for his planter which has been equipped with a seed monitor to keep a constant check on which rows are planting.

Kopfer has changed from 38 inch rows to 36 inch rows but won't go to narrow rows, explaining that he does not see any advantage to the narrower rows. Seed population rates have been incresed over the years however," I try to have 23 to 24,000 plants per acre at harvest," he remarked. Kopfer also has started to plant his corn crop earlier after he noticed his later corn was not quite as heavy as the earlier corn. "I try to start planting corn by April 18 but this year it wasn't until the 22nd," he remarked. Having the corn in early helps reduce the hay and barley rush, he added.

Hix uses a chisel plow equipped with discs after first using a plain chisel plow. It does a nicer job, he says. After chiseling the ground, is disced twice. The second time herbicides are incorporated. A spray tank has been added to the disc. "Next year we want to use a field cultivator with the sprayer to even the field out better," said John.

Hix feels that by going over the fields twice the herbicides work better, and by changing to a field cultivator on the final time

Winning recipes listed

Pa. chicken cook chosen at Norlebco

FREDERICKSBURG — After trying for three years, Judy Reynolds, a full-time student and housewife from Edinboro, will represent Pennsylvania in the National Chicken Cooking Contest which will be held later this year in Florida. Judy won the honor on May 20 after competing with seven other contestants in the Pennsylvania Chicken "Cook Off" contest held at Northern Lebanon High School, Fredericksburg.

The contest is sponsored annually by the Pennsylvania Poultry Federation which awards an all expense paid trip to the national contest and an additional 50 dollar cash prize to the first place entrant. Contestants in the competition were selected by judges for the National Broiler Council as the best 10 recipes entered from Pennsylvania.

The recipes were judged for simplicity, interest, appearance, cost, and flavor, explained John Hoffman, executive director of the Pennsylvania Poultry Federation. The council does not want the flavor of the chicken to be hidden, especially since the contests are held to promote the product.

This year's state winner is an active mother of two children, Amy, 10, and Mike 9, and is also a student at Edinboro State College studying physical education. Judy enjoys entering cooking contests because she "likes to meet other people and enjoys cooking," she said. Her winning recipe was "Cream Puff Topped Chicken Pie." The recipe follows:

CREAM PUFF TOPPED CHICKEN PIE

2 whole broiler-fryer chicken breasts, halved, boned, skinned, cut in 1-inch chunks
1 teaspoon salt
¼ teaspoon white pepper
3 tablespoons butter
1 cup chicken broth
1½ cups frozen mixed vegetables
¼ cup water
2 tablespoons cornstarch
3 tablespoons cooking sherry
⅓ cup sour cream
¾ cup shredded Cheddar cheese
Cream Puff Topping (Recipe follows)

Sprinkle salt and pepper on chicken. In fry pan place butter and melt over heat. Add chicken and saute, stirring, about eight minutes or until chicken is opaque and fork can be inserted in

(Turn to Page 124)

Elaine Cara, left, coordinator for the Pennsylvania Poultry Federation, awards Judy Reynolds, Edinboro, as the winner of the Pa. chicken cook - off.

Laminitus spells trouble for horses

NEWARK, Del. -- Laminitis is an inflamation of the sensitive laminae of a horse's foot. It's an extremely painful condition which results from circulatory congestion in the foot. Dr. C. Melvin Reitnour, Extension equine specialist at the University of Delaware, explains what horse owners should watch out for.

Reitnour notes that laminitis has many recognized causes. Perhaps the horse has overeaten, has a digestive disturbance, or has retained placenta after giving birth. Lush pasture intake or extreme surface concussion are also possible causes.

When the sensitive laminae become inflamed in a laminitis attack, the fragile union between the hoof and laminae weakens. The pull of the deep flexor tendon may actually create a partial separation of the laminae from the hoof wall.

When a chronic condition takes over, the condition is termed founder. One should look for a distorted, dished hoof with irregular horizontal rings. The long toe will curl if neglected. Also, a downward rotation of the coffin bone can cause a dropped sole. With very severe founder, the coffin bone can actually protrude through the sole of the foot.

There are many treatments for laminitis; however, only if the case is mild and the treatment prompt and adequate, is there much hope of avoiding a dropped sole.

In acute laminitis, especially in cases of excessive grain consumption, a purgative is recommended. Reitnour says a dose of mineral oil will act as a laxative and help to prevent absorption of poisons from the intestinal tract. Antihistamines are also helpful.

Treatment of founder consits of trying to restore the normal alignment of the coffin bone. This involved lowering the heel, removing the excess toe, and protecting the dropped sole.

Grange meeting held

LEWISBURY – The May session of the York-Adams Pomona Grange 40, was held at Valley Grange, Lewisbury, on May 13, with William Justh, Master, in charge. Special Guest at the afternoon session were: Anna May Snyder, National Grange Princess, and Runner-up in National Young Married contest, Mr. and Mrs. Richard Gallimore. All spoke briefly on the importance of Grange work and activities, and urged more participation in the youth programs.

Fae Snyder was elected and installed to the office of Flora.

Pa. State Legislature members who were present for the session were Mr. Donald Dorr and A. Carville Foster, spoke on "What's Happening At The State Level".

The judging of the sewing contest took place during the afternoon. Winners included: Class A, first, Joyce Reiner, Eureka Grange; second, Janet Emenheiser, sponsored by Red Lion Grange; and third, Treva Lease, Gideon Grange; Class B, first, Blanche Warner, Gideon Grange; second, Janet Emenheiser; third, Lourene Cooke, Eureka Grange; Class C, second, Janet Emenheiser; Class E, first, Joyce Reiner.

"Memorial Services" for all deceased members since May 1977, were held at the beginning of the literary program.

Since 1928
Pest control is too important to trust to anyone else

Mexican bean beetle battle booming

BELTSVILLE, Md. – Experimental soybean plants that are resistant to Mexican bean beetles are yielding nearly as well as popular commercial varieties in field tests at the U.S. Department of Agriculture's Beltsville Agricultural Research Center in Maryland.

According to Thomas Elden, research entomologist with USDA's Science and Education Administration (SEA), the new plants could eventually eliminate soybean losses to the Mexican bean beetle and still maintain yield levels and other quality traits characteristic of today's top soybean varieties. The resistant plants could be available to growers in two to four years.

The Mexican bean beetle is a serious pest of soybeans throughout most of the mid-Atlantic and Southeastern states and parts of the Midwest. Crop yields can be reduced by as much as 25 per cent. The development of high yielding, resistant soybean plants, says Elden, could head off a current geographic spread of the insect's ravages, and thus reduce the need for insecticides.

To best compare the yields of the experimental plants with commercial soybean plants, Elden kept the Mexican bean beetle out of the Maryland field tests through chemical control. "Had the tests included the insects," says Mr. Elden, "the experimental plants would have far-outyielded the commercial plants. All present commercial varieties are highly susceptible to this pest."

The Beltsville research is part of a broad USDA program to develop insect-resistant soybean varieties suited to different farming regions. Other SEA scientists at the Soybean Research Laboratory in Stoneville, Miss., are breeding and selecting soybean plants for southern growers. Advanced breeding lines at Stoneville have excellent resistance to the Mexican bean beetle, good resistance to the soybean looper, and moderate resistance to the corn earworm.

The scientists at all three locations are working with offspring of three highly resistant soybean plants discovered in South Carolina in 1968. The plants being tested at Beltsville, the eighth generation, still have strong resistance. The chemical makeup of the plants does not suit the Mexican bean beetle – causing a reduction in leaf feeding and larval development.

"Now that we have yields comparable with top varieties," says Elden, "we will continue to cross our plants with commercial varieties that have high protein and oil content, disease resistance, and other quality factors. Some resistance will be lost in the breeding, but the progeny could still stop yield reductions by Mexican bean beetles."

FFA awards banquet held

WASHINGTON, N.J. – The tenth annual Warren Hills Future Farmers of America Parent Member Banquet was held on May 13. First year members of the FFA received the Greenhand Awards. Second year members received Chapter Farmer Awards.

Outstanding Greenhand award was presented to Robert Kerkendall. Linda Hengst received the Star Chapter Farmer Award.

The Warren Hills FFA Chapter presented 12 different proficiency awards. The ten first place awards are as follows: Poultry Production-Nancy Schnetzer; Beef Production-Don Rush; Swine Production-Raymond Kerkendall; Agriculture Mechanics-Robert Rutan; Crop Production-Robert Rutan; Placement in Agriculture Production-Mike Anema; Soil and Water Proficiency-Sam Zachar; Home and Farmsted Improvement-Nancy Schnetzer; Dairy Production-Mike Anema; and Livestock Production-Robert Jeskey.

Also awards were given to those people who helped the chapter. They were presented with Honorary Chapter Farmer Awards. The recipients were Craig Lesher, Harry Scheiber, and Timothy Wasser.

Robert Rutan received the Scholarship Award for improving his grades most progressively throughout the year. Sheridan Ames won first place in the local six to eight minute public speaking contest. Kathy Barton won first place in the three minute public speaking contest along with Donna Reese, winner of the Creed Contest.

The highlight of the evening was when the Dekalb award was presented to Nancy Schnetzer and Sam Zachar for being outstanding seniors. Their names will be engraved on a plaque. They will receive a pin, certificate and an award from the Warren Grange. They also received a cash award of $35 from the chapter.

Agricultural Conservation Program funded at $190 million despite Carter's objection

WASHINGTON, D.C. – The House Appropriations Subcommittee on Agriculture, under the chairmanship of Jamie Whitten (D-Miss.), recently handed the Carter Administration two major setbacks. In spite of the fact that Jimmy Carter is the first farmer in over a century to sit in the Oval Office, he and his OMB had followed the tactics of previous administrations in trying to drastically curtail the Agricultural Conservation Program. And they had only proposed $90 million for the 1979 ACP. The Whitten Committee restored the ACP to the level of recent years – $190 million.

In another major upset to the Carter Administration, the Committee indicated that the Clean Water Act's cost-sharing Program should be administered by ASCS, not the Soil Conservation Service. While the USDA had asked for $200 million for this cost-sharing program and $2.8 million for the SCS to begin planning the new program, the White House recommended to the Congress that the full $200 million be eliminated – and then left the $2.8 million for SCS to set up the preliminary administrative organization.

Whitten's Committee not only reversed the administrative procedures so that ASCS would handle the cost-sharing, but eliminated the $2.8 million for SCS. The Committee provided $25 million for a beginning of this cost-sharing effort to clean up our Nation's waterways through ASCS Committees and $4 million for SCS technical services. Furthermore, the Committee directed the Carter Administration to come up with a new program in 90 days.

"It is a little hard to understand how the Carter Administration, in view of Jimmy Carter's campaign against bureaucracy and increased federal spending, could have advocated the establishment of a completely duplicative cost-sharing program at the county level," says the National Limestone Institute, Inc.

Penna. Beef Council asks for voluntary check-off

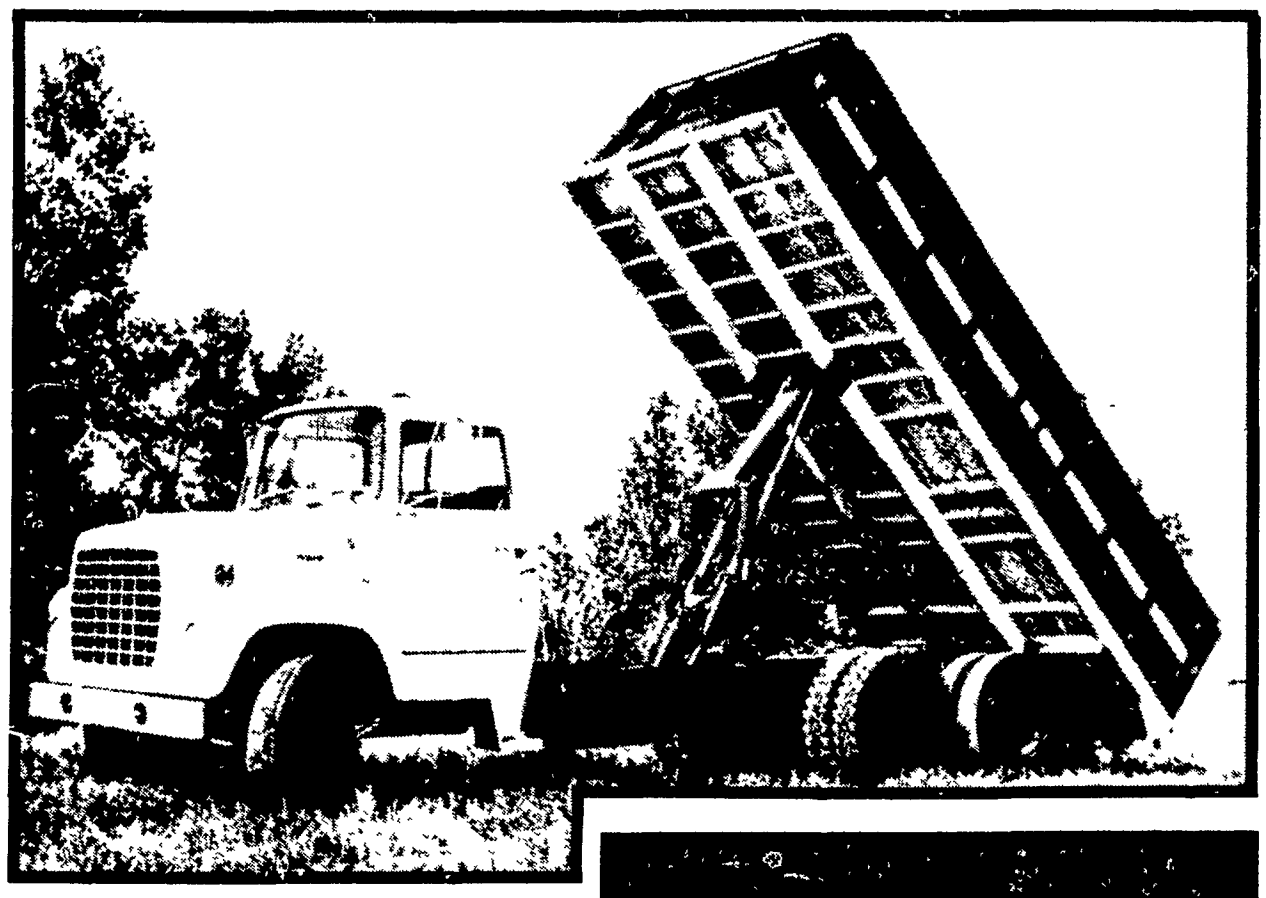
HARRISBURG – The Pennsylvania Beef Council, Inc. is asking members of the Pennsylvania Cattlemen's Association and other veal and beef producers in the state to support a voluntary check-off so that funds will be available for beef promotional and educational programs.

The group feels that they don't need a national referendum or state legislation. They are trying to do it themselves by asking for contributions of 25 cents for each animal sold to be sent in by the cattle producer to the council treasurer. No check-off at the market is required and no complicated "value added" deduction method.

These funds are necessary to improve Pennsylvania's beef industry and provide better markets for cattle and calves in the state.

Cattlemen have been asked to send 25 cents for each head of cattle - calves, feeders, finished cattle, culls, vealers and registered cattle sold to Robert R. Coleman, treasurer, Pa. Beef Council, Inc., 4605 North Road, Harrisburg, Pa. 17109.

Why buy a copy... when you can have the original ?



- Thirty years as the leader in hoist design and research makes HARSH® the name to be trusted in hydraulic hoists
- Unique telescopic scissor hoist
- Models available to fit 12-26 ft bodies
- The one-piece Rigid-Lift® hoist weighs less and is stronger than the competition's "add-on" unit
- HARSH's one-piece unit is more quickly installed
- And best of all, the price of an original HARSH Rigid-Lift® hoist is less than that of a copy!

My Thoughts ...

And welcome to them

By JOANNE SPAHR
Assistant Editor

It's my understanding that this weekend is a favorite All-American holiday--pool season opening day.

But, I really wouldn't know. How would I know? I wouldn't recognize a swimming pool if I fell head first into one.

Now, approximately 95 per cent of the American population wouldn't understand my ignorance, but, then 95 per cent of all Americans weren't raised on my family's farm where only "lazy" people went to swimming pools. (That's why I always contended that I should be the one to go swimming -- everybody knew I was the laziest one of the bunch.)

So, poor, deprived farm child that I was, I was forced to find other ways to cool off on those hot, Summer work days. One of the better ways always came during tobacco planting season. That one was the old "fall into the tobacco bed by accident" trick. Anyone who was raised on a farm where tobacco is a cash crop knows that the lush green seed beds make a marvelous soft, cooling cushion when the sprinkling system is trained on them. Of course, there's always the muddy bed lying in wait under the cool, plush plants, but a farm child finds that inviting, as well

So, on a hot Summer day, it was not uncommon to see me over-reaching for a tobacco plant, only to topple head first "by accident" into the seed bed. Of course, at the same time, it was not uncommon, either, to hear my father, grandfather, and brother send up a united chorus of hoops and hollers as I broke the stems of the tender little seedlings beneath me.

When I had worn out my welcome on that one (which usually came after my second supposed accident), there was always the "stick your arm in the milk cooler" trick. Of course, there was always the threat of losing an arm if the lid came crashing down or withering a finger or two in the dry-ice like temperatures of the water, so that novelty wore off rather quickly.

But, the cooling trick that never wore off was hiding under a favorite shade tree and avoiding work all together. It didn't beat swimming, but it sure made working on hot Summer days a lot more tolerable.

USDA nitrite decision pleases pork council

DES MOINES, Iowa – "Pleased and relieved" is the reaction of John Soorholtz, president of the National Pork Producers Council, to USDA's May 15 decision regarding the use of nitrite in bacon processing.

Assistant Secretary of Agriculture Carol Tucker Foreman announced that USDA is proposing regulations that set limits on the amount of nitrite that can be used, on the amount of blocking agent that must be used, and the level of nitrosamines that can be present in the product.

"The interesting thing," says Soorholtz, a pork producer from Melbourne, Iowa, "is that the proposed regulations are essentially what the processing industry has been doing for the past three years. In fact, the American Meat Institute recommended these levels to the industry in April, 1975."

"This is certainly a positive step and should clear up some of the confusion so that we can all get back to continuing to give the U.S. consumer the healthiest and safest pork products in the world," adds Sorrholtz.

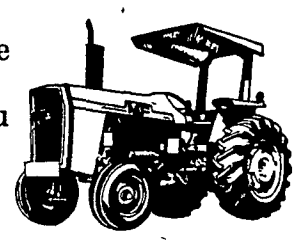
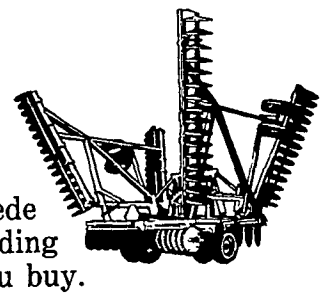
Massey-Ferguson Summer Stampede Sale!

Super-Saving Specials Include $600 Rebate On Tractors



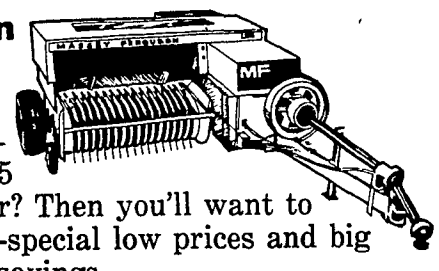
During our Summer Stampede Sale, now through July 28, Massey-Ferguson will give you a whopping $600 rebate with the purchase of any one of the MF utility tractor models in the 34 to 81 hp range.
Save big on the full line of fuel-efficient and performance-packed go-getters from Massey-Ferguson.

$30 to $400 Rebates on Implements



There are also big cash rebates available on a large selection of implements during our Summer Stampede Sale . . . $30 to $400, depending upon the MF implement you buy.

Special Prices On MF Balers

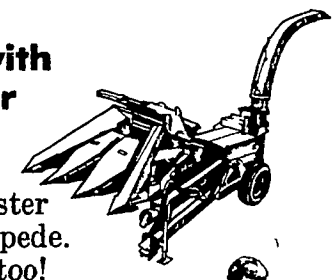


Need a rectangular or big round baler—or maybe an MF 655 Hydrostatic Swather? Then you'll want to check out our super-special low prices and big Summer Stampede savings.

Great Savings On Big Tractors, Too!

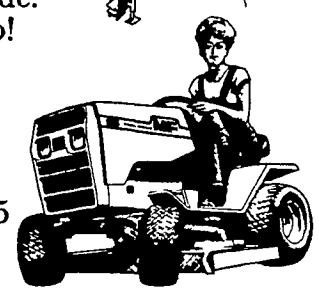
And, we're offering special prices and big, big savings on many selected models in the 100 hp and larger class . . . but only during our Summer Stampede Sale.

Free Helix Grinder with MF Forage Harvester



Get a helix knife grinder *free* when you buy a rugged MF Forage Harvester during the Summer Stampede. Special savings available too!

Big $200 Rebate On MF Lawn Tractor



Save $200 and make lawn care a breeze with an MF 85 Lawn Tractor — 8 hp with 36″ mower. Buy now, and Massey-Ferguson will give you a $200 rebate.

Hurry! Summer Stampede Sale offer ends July 28, 1978. Limited to available inventory.

Pre-emergence tank-mix controls grassy and broadleaf weeds without carryover

Banvel®+Lasso®*

a giant first step toward total weed control in field corn

Successful on millions of acres where corn is the major crop, the Banvel + Lasso herbicide combination can give you "near perfect" control of a wide spectrum of grassy and broadleaf weeds, when used according to label directions.

Banvel + Lasso herbicide is compatible with most fluid fertilizers. It needs no incorporation. There is no carryover.

Take a giant step toward total weed control. Call about the Banvel + Lasso combination. Remember, the "near perfect" herbicide is the one you build...starting with Banvel herbicide...from Velsicol.

*The combination is effective on all major soil types, except light sandy soils. Lasso is a registered trademark of Monsanto Company.

To achieve best results, be sure to read, understand and follow the label.

Corn post-emergence
When it's down to:

Which are you using?

For post-emergence weed control in corn . . . what if 2,4-D doesn't work? Like on smartweed.

Banvel herbicide, used alone or tank-mixed with 2,4-D, controls more broadleaf weeds than 2,4-D used alone.

So think Banvel:

. . . When you first see smartweed, velvetleaf, ragweed, cocklebur, pigweed, sunflower, morningglory, lambsquarters, Canada thistle seedlings.

. . . When you're planning to rotate to wheat or oats in the fall or soybeans next spring . . . because BANVEL DOES NOT CARRY OVER.

Your ag chemicals dealer has your supply. Any questions? Call free of charge on the Velsicol Herbicide Hot Line: 800-621-4129 (Illinois callers: 800-972-8381).

Before using any pesticide, read the label.

Free booklet available on new concept in combines

NEW HOLLAND – A free brochure, describing the new rotary harvesting concept for combines is available to local area farmers according to Keith Weinlader, product manager, of Sperry New Holland.

The booklet outlines the differences between conventional combines and rotary units. Weinlader says that since Sperry New Holland introduced the new concept in 1975, other manufacturers have introduced rotary machines or have announced they will do so in the future. Many farmers feel all new combines will be of the rotary design in a few years.

Weinlader says the booklet explains the concept in simple terms. As an example, he says the damage to grain caused by conventional combines is related to a boxer repeatedly hitting a punching bag.

"A conventional machine has the cylinder and concave across the front of his combine. There are a number of rasp bars because grain has to be knocked loose in that one pass through the cylinder and concave area." Weinlader says.

"As a result, grain is hit by several rasp bars before it gets through the concave. This repeated hitting is what causes damaged grain. It's kind of like a boxer battering away at a punching bag that can't get away. You can't even see how often he's hitting that bag because he's hitting it so fast. That's what the rasp bars do to the grain, corn, beans or seed that are being harvested with a conventional combine.

In contrast, Weinlader says, the rotary combines have a cylinder and concave running lengthwise through the machine. The Sperry New Holland Twin Rotor combine utilizes two rotors, side by side. The crop enters these rotors and is spiraled rearward. This causes centrifugal force to help lift the grain away from the residue. And, because there are only two rasp bars, the crop has the opportunity to escape through the concave before it is struck repeatedly.

"The result is less damaged grain, cleaner grain and less loss out the back of the combine," Weinlader notes.

"This little booklet won't make you a combine engineer, but it does help make this new concept easier to understand. And, since we're going to be reading and seeing more about rotary combines, I think it will be of help to anyone who owns or uses a combine." The booklet can be obtained by writing Combine Booklet, Sperry New Holland, New Holland Pa. 17557. There is no charge for the booklet.

Berks Co. wool pool set

READING – The Berks County 1978 Wool Pool will be held on June 7, from 7:30 a.m. to 3 p.m. It will be held at the Reading Fairgrounds. All wool producers are invited to market their wool through the Berks Pool.

Prices range from 84.15 cents per pound of 3/8 to ¼ staple down to 30 cents for Karakul. Buyers will be A.H. Helmig and Co., Narberth, Pa.

Tentative graders will be Ben Morgan and Robert Houston. A slight deduction will be made for the pool's labor and expenses.

Wet wool will not be accepted. In case of rain, the wool should be protected.

UNIPEL® 13-34-10
fertilizer can get your corn crop off to a super start:

It has a high concentration of water-soluble Phosphorus that gets to young seedlings quickly. Helps plants establish a good root system – the starting point for top yields. Its quick-acting and long-lasting Nitrogen team up to feed the young plants for full yield potential, continually from sprouting to harvest.

This is the Starter Special that corn growers know from good experience It's highly effective as a banded starter. And it's SAFE . . no chance of ammonia damage to tender, young seedlings when used as a "pop up" and applied directly with the seed at 50 lbs /acre.

How can we fit UNIPEL 13-34-10 into your corn fertility program?

Pa.'s first endurance ride held in Chester Co.

KENNETT SQUARE – Earlier in May, the Liberty Bell 50, Pennsylvania's first endurance ride, was held near Kennett Square, Chester County. Horses and riders from all over the east coast gathered to try their luck in competing to prove that their mounts were the most fit and could cover the 50 mile course in the least time in the best condition.

The Sweet Pea Memorial Challenge Trophy, awarded to the horse judged to be in the best condition after placing in the top ten position was won by Valerie Kanavy, Chester Springs, Pa., riding Jameel Abyad, a 10 year old Arabian mare. The award was presented by Dr. and Mrs. Matthew Mackay-Smith.

Colonel, a 13 year old Thoroughbred cross gelding, ridden by Dif Fatum, Staatsburg, N.Y., won the First to Finish Challenge Trophy. The time of the winning ride was three hours, 59 minutes.

First Junior rider to finish was Susan Ingram, Great Falls, Va. She rode Gay Sprite, and 11 year old Thoroughbred-Welsh mare. She finished the ride in five hours, 28 minutes and was tenth over all to finish.

Other trophy winners included Matthew Mackay-Smith, Coatesville, Pa. who won the Thoroughbred trophy, presented to the first Thoroughbred to cross the finish line. He rode Scarlet Dion, an 11 year old bay mare. The Arabian Breed award went to Valerie Kanavy, Half Arabian Trophy was won by Marilyn Miller, Woodsboro, Md., who rode Buddy, a 12 year old part-Arab gelding.

Quarter Horse trophy went to Larry Kanavy, riding his 7 year old mare Charge Cindy. Appaloosa Trophy went to Arlene Everman, from Winchester, Kentucky, who rode Leo Ann, a registered mare. The unregistered horse award went to Finka S. Cathey, Frederick, Md., who rode a 7 year old bay gelding named Michael.

Thirty three horses started the race. Twenty-two finished the course.

The length of time needed to prepare for an Endurance Ride varies, of course, with each animal. A horse who has had a vigorous work history on the race course or hunt field will take less time and work to condition than the horse who is an unschooled five year old (minimum age for most Endurance Rides). Once a horse has been fit, it seems to take less time and effort to get him fit again. Still, most riders allow 10 or 12 weeks to prepare for a 100 Mile Competitive Ride and up to a year to prepare for a 100 Mile Endurance Ride.

The most soughtafter Trophy on an Endurance Ride, besides the elusive first over the finish, is the trophy given for the best condition amongst the top ten or top five.

Endurance Riding has no minimum time. There is a maximum time for completion, however. Also, the competition takes place during twenty-four hours in most cases. Generally nine or 10 hours are allowed for

(Turn to Page 119)

Valerie Kanavy, from Chester Springs, on Jamel Abyad, a 10 year old Arab mare, was second to finish and winner of the Sweet Pea Memorial Challenge Trophy. Behind her is Larry Kanavy, who finished fifth and was the winner of the Quarter Horse trophy.

Farm Drainage Pays High Returns

Investment	Typical Annual Return
Land Drainage	21-46%
Farm Buildings	3-23%
Farm Land	11%
Stocks	7.4%
Bonds	6.1%

Even with the conservative figures shown above, it's obvious that land drainage should top farmer's lists of investment priorities.

✓-CHECK THESE BENEFITS ...

- Better soil aeration.
- Better soil moisture conditions.
- Longer growing seasons.
- An increased supply of nitrogen to the plant.
- Soils warm up more quickly.
- Certain toxic substances and disease organisms are removed.
- Soil erosion can be reduced.
- Deeper root development enables plants to better withstand summer droughts.
- Valuable livestock water supplies are obtained.
- Increased crop yields and improved crop quality.

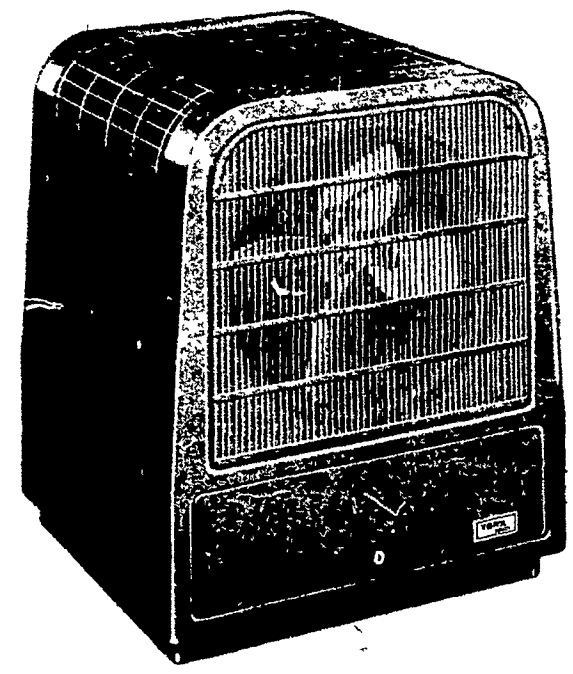
AIR CONDITIONING
YORK CHAMPION IV



THE YORK CHAMPION IV Total Engineering Concept

You expect the air conditioner you buy to cool and dehumidify your entire home In addition, you may be looking for a quiet unit and one that will operate efficiently Certainly you want a system that is easy to maintain or service and one that is built to last Here s how the York Champion IV unit was designed to meet these four basic requirements

I. QUIET OPERATION

The Champion IV unit uses twin fans for low velocity, extremely quiet air flow through the unit In fact, air flow is so gentle it will not harm vegetation located as close as 12 inches from the coil The compressor is positioned below the twin fans to help disperse its operating sound

The Champion IV unit is engineered to give you as quiet a unit as possible without affecting the other benefits Visit your York dealer and listen for yourself

II. CONSERVE ENERGY

In terms of energy savings the Champion IV unit has been engineered to give you optimum efficiency without sacrificing quiet operation serviceability or durability

Because the York condenser coil uses more fin surface with fewer tubes, a large refrigerant charge is not needed, eliminating the need to provide heat to the compressor The Champion IV unit does not consume power when it's "off" as do conventional units with constantly operating crankcase heaters

HYDRAULIC AERIAL EQUIPMENT

N.H. says hay preservatives need more research

NEW HOLLAND – It's too soon to be sure, but practical hay preservative chemicals seem headed our way, opinionizes Mac Reeves of the Sperry New Holland Company, here.

Reeves, who is product manager for balers at New Holland, says it's about time we found some good preservatives that'll let us bale damp hay without danger of mold. He stresses the need for more research.

The search is older than the pickup baler, he adds. It could be almost as old as haying. Generations of hay producers sprinkled rock salt on hay if they suspected it might be damp enough to mold in the mow or stack.

Reeves says folks were never sure it helped but cattle ate the salted hay with apparent relish.

Other chemicals were tried shortly after baling got to be the accepted way to harvest hay. Applicators were available commercially by the late 1940's.

Not much information was

(Turn to Page 123)

With hay commanding record-high prices, farmers are paying more and more attention to management practices and hay-making methods. One idea receiving close scrutiny is the concept of adding hay preservatives.

Bergland seeks July 1 passage for farm production protection act

WASHINGTON, D.C. – Secretary of Agriculture Bob Bergland is hoping for congressional approval of a consolidated crop disaster/crop insurance program by July 1 in order for actuarial work and other mechanics to be completed so that the new program could become operational on 1980 crops. The existing crop disaster program, under the 1977 Agricultural Act, expires in late 1979 and a new program will have to be ready when fall-seeded 1980 crops are planted.

Bergland told a Senate Agriculture subcommittee recently that if enactment is delayed much beyond July 1 it might be necessary to extend the current disaster programs for one more crop year.

The consolidated program, known as the Farm Production Protection Act, would supplant the existing crop disaster provisions, the Federal Crop Insurance Program, and Farmers Home Administration and Small Business Administration disaster loan programs.

Pa.'s first endurance ride

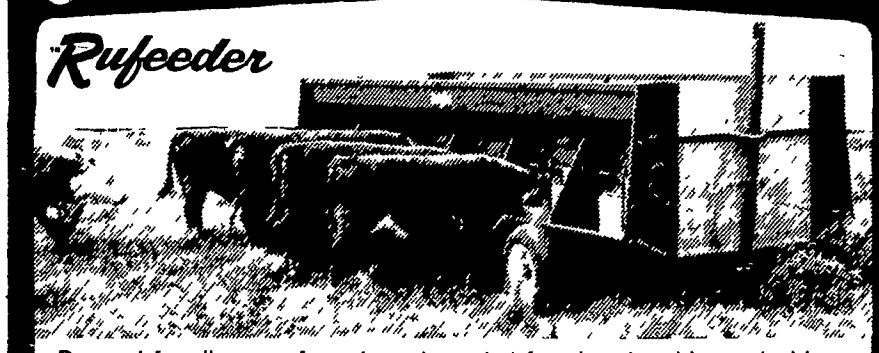
(Continued from Page 117)

completion of the fifty mile Ride and 24 hours are allowed for a 100 mile ride. These times include mandatory vet stops during which each horse's vital signs must reach standards set by the veterinarians who are officiating. At any indication that a horse is not up to the stress being asked of it, the animal is immediately disqualified from the ride and a ride for the horse, in a trailer, is arranged.

Although horsemanship or Equitation, as such, is not judged in the sport, practical horsemanship becomes more and more important as the contest becomes harder or faster. A good rider who is fit and balanced is going to help his horse more than one who is not so skilled or athletically prepared.

Feterl has a better way to feed roughage.

Rufeeder



Designed for all types of roughage. It is ideal for silage, baled hay, cubed hay, ground hay, field green chopping and chaff. The new RUFEEDER is 20 feet long, and on a free choice basis can handle approximately 70 head. ●Feed capacity—375 cubic feet. ●Mounted on special low profile heavy-duty gear. Homelite® multi-purpose saw cuts just about anything.

Heavy Duty 2-Stage Air Cleaner Reduces Engine Fouling.
Using the famous 2-cycle Homelite engine, the XL-98A has power to spare for cutting concrete, steel, aluminum, and cast and ductile iron 12" abrasive wheels available with different grits for cutting specific materials

- Abrasive wheels driven at 5,000 r p m (15,700 surface ft /min)
- Adjustable wheel guard locks tight in any position
- Engine uses capacitor discharge ignition no points to foul
- Built-in governor controls engine and wheel speed for safer cutting
- Automatic rewind starter weighs only 26 lbs
- Full 4-inch depth of cut

McCoy gets stockyard presidency

LANCASTER – William G. McCoy, president of McCoy Cattle Co., was elected to his seventh term as president of the Lancaster Stockyards, Inc. at the company's annual stockholders' meeting on Saturday, May 13.

The following officers were also elected: Robert S. Heilbron, S.L. Heilbron & Sons, vice-president and secretary; and James C. Dunlap, president of Walter M. Dunlap & Sons, vice-president and treasurer.

Other members of the board of directors include Richard Blakinger, C.E. Burnett, Charles B. Diller, Walter M. Dunlap Jr., Max C. Hempt, John M. Hoober Jr., Robert W. Johnson and Zene E. Kauffman.

In recognition of 50 years of "faithful, conscientious service" at the stockyards, Andrew Eberle was presented with an engraved silver tray during the meeting.

McCoy, in his president's report, cited an increase of six per cent in total livestock receipts during 1977 with cattle up 13.5 per cent and hogs up 11 per cent, while feeder pigs, calves and sheep numbers declined.

Salable receipts at the Lancaster yards in 1977 totaled 335,467 head compared to 335,784 a year ago and 232,551 in 1972, when the corporation was formed and the stockyard property was purchased from the Penn Central railroad company.

Bill McCoy

Special events during June are the Fed Steer Show and Sale on Wed., June 7, and the Fed Hog Show and Sale on Wed., June 14.

Pa. stream map available

UNIVERSITY PARK – People who like to fish, hunt, and hike – and all outdoorsmen wanting to study the terrain of Pennsylvania – may find handy the Stream Map of the Commonwealth, published by the Agricultural Experiment Station at The Pennsylvania State University.

Geographical features included are 3,000 each of streams, towns, and elevations above sea level. The map gives the names and locations of major mountains, valleys, lakes, dams, swamps, and reserviors. The detailed Stream Map is about 3 feet wide by 5 feet long and the scale is 6 miles to the inch.

The map is available for $1.06, tax included, from Stream Map, Box 6000, University Park, Pa. 16802. It is mailed in two styles, flat or folded. The flat ones are ideal for mounting on walls of cabins and homes. In ordering, one should indicate which type he wants. Checks or money orders should be made payable to The Pennsylvania State University. Please allow two to three weeks delivery.

The map was produced by Howard W. Highee, professor emeritus of soil technology. He said it is the most detailed map of its type ever assembled for Pennsylvania and took three years to produce.

When visiting the Penn State campus at University Park, the Stream Map can be obtained in room 232 of the Agricultural Administration Building, corner of Curtin and Shortlidge Roads. The office is open from 8 a.m. to 5 p.m., Monday through Friday.

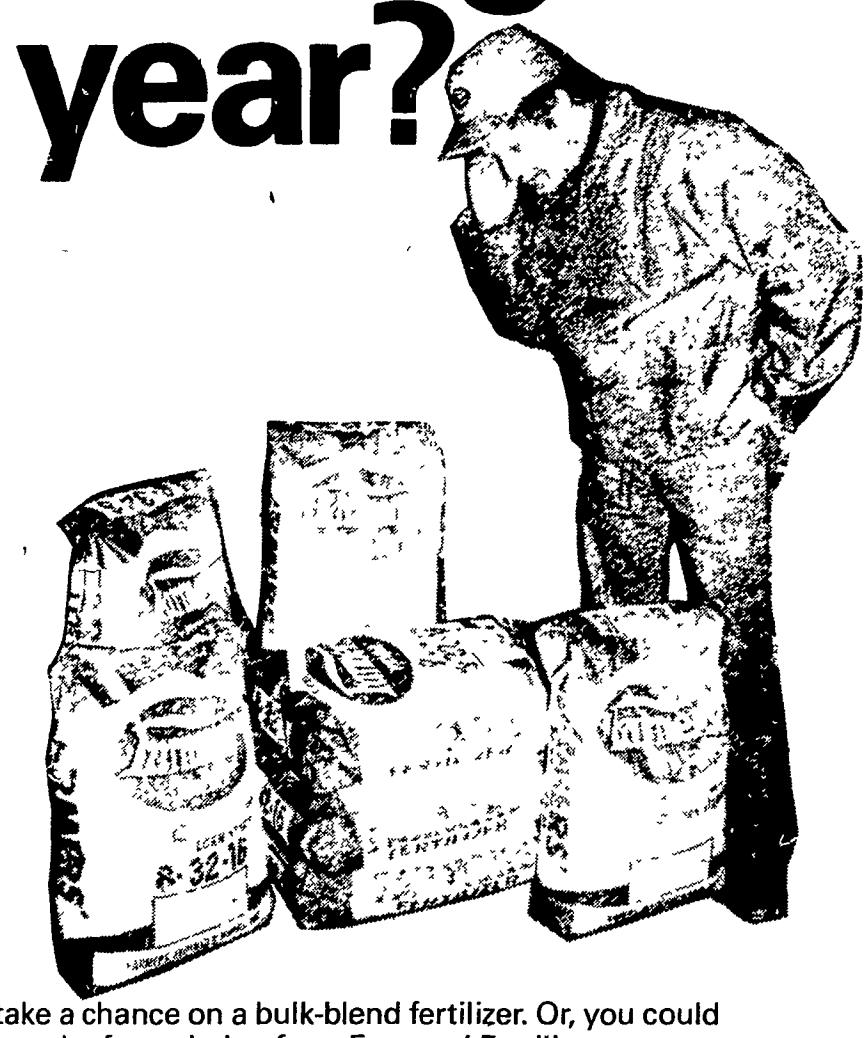
Puzzled again this year?



This year you could take a chance on a bulk-blend fertilizer. Or, you could rely on a premium granular formulation from Farmers' Fertilizer.
Farmers' Fertilizer will mix a formulation especially suited for the type of soil on your farm, and for the crops you grow.
That way, you'll get exactly what you need in basic N, P, K. Plus you'll get these benefits from the new premium formulations.

- Important secondary plant nutrients to beef-up your soil.
- At least three forms of nitrogen for better yields.
- Low calcium carbonate content to protect soil pH and reduce liming costs.
- Starter row fertilizer contains 100% mono-ammonium phosphate for less seed damage.

When you visit Farmers' Fertilizer, you won't have to wonder if you made the right decision for all your spring fertilizer and ag chemical needs.

John York says federal dairy program is not expensive

ALLENTOWN -- Agriculture is entitled to be fairly recognized through government support programs, considering the huge sums of money spent for various other government functions, says a noted dairy industry leader.

John York, former general manager of Eastern Milk Producers Cooperative and now vice president for member and public relations of Lehigh Valley Cooperative Farmers, notes that government expenditures to buy dairy products are not expensive. "It should be pointed out that expenditures for dairy price supports are relatively small as related to federal outlays," York tells dairy farmers. "During 10 of the last 15 years the per cent of dairy price support expenditures has been equal to or greater than what it was in 1977," York notes. Last year's net bill for dairy support programs came to $714.3 million, or 0.2 per cent of all federal outlays.

"Dairy support programs are not expensive when viewed in relation to total government expenditures," York exclamed, adding that he would be willing to argue that point with anyone. "A healthy dairy industry is probably more important than any other industry," the dairy leader opinionizes.

The problems of handling surplus milk this Spring should not be as difficult as those encountered a year earlier, York continues. "Thus far it has not been as difficult," he affirms. On a related topic he says, "Some New York dairy cooperatives are selling milk to Order 2 handlers at ridiculously low handling charges. As a consequence, New York handlers are moving towards making sales in Order 4 and 1 marketing areas at destructively low prices. Vermont passed legislation to protect that state's dairy farmer's against this movement. Meanwhile Johanna Farms, which purchased Order 4 milk from Eastern, Inter-State and some from the Dairymen's League, as well as from independent farmers, has decided to become pooled into Order 2. Thus, their Order 4 purchases have dropped. Cumberland Farms is exploring the same avenue," York says.

John York

York goes on to say that the dairy problem in the Northeast is the New York market. "Its problem should not be imposed on other markets," he declares. To exemplify the situation, he says that seasonal production patterns in Order 2 are horrible. "In 1977, Order 2's May production was 10 per cent over that of March. Making the same comparison in Orders 1 and 4, the increases come to 7.5 and four per cent, respectively. "Sales are relatively even in Order 4," York notes, adding that "the Northeast is a deficit milk production area. It produces about 19 per cent less milk than is needed to take care of the per capita consumption of milk and dairy products." For that reason, York claims that the dairy industry in the Northeast is still in an "ideal position." The dairy industry leader adds: "I would think that speaks something to the effect that dairy farmers in the area ought to produce milk for the market they live in."

Crop, livestock survey in progress

HARRISBURG – State Agriculture Secretary Kent Shelhamer said recently that a nationwide survey to identify 1978 crop acreages and livestock numbers will include contacts with area farmers.

The enumerators, working with the Pa. Crop Reporting Service, will be asking questions about acreages planted for harvest as well as numbers of cattle and hogs. All information will be held confidential, and only state and national estimates will be made available to the public.

Shelhamer said that the objective of the survey is to produce reliable and timely information as a guide to farmers for their marketing operations. These estimates help stablize market conditions by providing both growers and buyers with unbiased, official estimates of production. Thus, rumors and trade projections cannot be a factor in setting price or supply levels.

According to the Crop Reporting Service, the report on spring planted acres will be published on June 30 and followed July 11 with estimates of yield and production. Hog and pig numbers will be reported on June 22 while cattle numbers will be released on July 26. For more information, one can contact the Pennsylvania Crop Reporting Service at 717-787-3904.

The survey will be taken between May 22 and June 2.

It's Expo time for Lancaster County 4-H'ers

By KENDACE BORRY

LANCASTER – It's 4-H Expo time again for Lancaster County and throughout the area various clubs are busily working on their displays for the event. Scheduled to take place from June 1 to June 3 at the Park City Mall, the finishing touches are being put on ideas dreamed up months ago by different 4-H clubs.

Thirteen groups are participating including representation from horse, dairy, community, photography, crocheting, beef and sheep, and sewing clubs. There will also be a special petting zoo on Friday night from 6 to 9 p.m. and on Saturday from 1 to 4 p.m.

"A multi-media photographic experience," is the way Dan Hoy, leader for the Lancaster County 4-H Photography Club, summed up his club's exhibit. The display, which will resemble a rocket ship from the outside, will feature film, slides, and soundtrack inside the spaceship which will take its audience for a ride in deep space. The 4-H'ers are creating the soundtrack, making the film, and editing the production. The trip through space will take about six to seven minutes and then be ready for the next crew.

The use of strawbales is being applied by the Penn Manor 4-H Community Club whose theme of 4-H giving you freedom of choice involved all 70 members of the

(Turn to Page 130)

From left to right, Sheri Sell, Lori Schultz, Korina Stauffer, and Amy Stauffer work on the giant dollhouse which the Swift Stitchers will exhibit at the Expo to be held at the Park City Mall.

TEST IS IMPORTANT

29H2775 Hanover-Hills TRIPLE THREAT-RED VG-87 GM

USDA, 1-78 Rpt. 87%
180d. 113h. Av. 15,967M 3.74% 597BF
PD +$69 +520M *+.11% +35BF
HFA. +1.65PDT. +260TPI 83% Rpt.

TEST IS A VERY IMPORTANT TRAIT.

The test differential price is better than ever, so a higher test level means more money in the dairyman's pocket. To improve butterfat test through breeding, a dairyman must select bulls which are plus proven for PD% TEST. A bull whose daughters are averaging 3.8% or higher but maintains a minus PD% test when used on a low testing cow WILL NOT IMPROVE TEST in that cows offspring. Most probably he will decrease it.

On the other hand, a bull whose daughters are averaging 3.5% but has a plus PD% test WILL IMPROVE THE TEST on the same cows offspring. The bull with the plus PD% test is genetically the test improver of the two. The one who will give a dairyman the most progress in improving the butterfat test in his herd replacements.

DO NOT BE MISLED. Some A.I. Organizations advertize their bulls as having a high test level on their daughters. If that same bull does not have a plus PD% test HE WILL NOT IMPROVE THE TEST IN THE NEXT GENERATION.

ABS currently has 16 bulls available who are plus PD% test. 10 of these bulls are plus 80 PD dollars or more and 7 are plus proven for HFA type.

*This is Predicted Difference Percent Test. (PD% test)

Hay preservatives

(Continued from Page 118)

available on the contents of the chemicals used in the 1940's. Manufacturers tended to hang onto their "secrets" and the formulas, if known, might not nave been very exciting anyway.

Regardless of the formula, the late 40's and early 1950's hay chemicals didn't dent the market much. Damp hay treated with the "powders" may not have molded as badly as untreated hay but it was usually very dusty coming out of storage. There were a few fires, too.

Apparently, some of the chemicals had a real kick. Treated hay may have sometimes resulted in milk flavor problems. This was described as "cardboard" flavor. And, depending on the chemicals used, the milk produced by cows fed the treated hay sometimes had very low bacteria counts.

Users reported some milk inspectors could pick it out at the milk plant. Inspectors would call up to ask if they'd been feeding powder-treated hay. The ultra-low bacteria count was the clue.

Whatever the reason, those early chemical hay preservatives didn't solve the wet weather haying problems, according to the New Holland employee.

Barn-dried hay was the one solution that worked. Unfortunately, the people who used the system to make high-quality hay in spite of catchy weather really worked. It took a lot more effort to place 40 per cent moisture hay bales on a drying platform than to stack at random. The extra labor required made the "practical" solution an impractical proposition for labor-shy dairymen, says Reeves.

About then conditioners came along to crush thick-stemmed crops for faster curing. That development began about 50 years ago and came of age with the introduction of mower-conditioners in the mid 60's. Hay curing speeded up.

The speed-up in drying time barely kept pace with the yield increases we were getting from better varieties and higher fertilization, says Reeves. A 2-ton an acre yield gives you a swath about twice as thick as a 1-ton yield. The thicker swath just takes more time to cure. That's the reason we still need about as many days between cutting and baling as during the Depression, he explains.

Then haylage came along. Fully mechanized, the haylage system let humid area hay growers get their first cutting off between showers because it didn't need to be dried down much under 50 or 60 per cent moisture.

Nevertheless, farmers continue to bale hay. Reeves predicts baling will be better than ever once we get some good preservatives that'll let us bale at the same moisture content at which we like to chop for haylage.

Some are already on the market, the New Holland man advises. Among other possible choices, mixtures of propionic and acetic acid are getting moderately good reviews from farmers who have a season or two experience. (Propionic acid is the chemical that keeps bread "fresh" in the grocery store and acetic acid is what makes vinegar taste different from good hard cider.)

But research at Purdue University and elsewhere shows real promise for anhydrous ammonia, too. Investigation continues, but there's some indication the NH3 applied at about one per cent will do the task. It might even be more economical than some other materials. A big question now is whether to treat as we bale or in the stack. With NH3 gas, it may be easier in the stack, comments Reeves.

If this does become practical, part of the economics might be the protein boost you'd get from ammonia-treated hay fed to dairy and beef cattle. The ammonia nitrogen would be expected to have the protein-substitution benefits of urea-based supplements. We already use it on silage.

The ammonia may even tend to improve the fiber digestibility of poorer quality forages. Ammonia-treated straw is being evaluated as a roughage at several research centers.

If the thought of tagging a nurse tank of ammonia around the alfalfa field behind the baler doesn't seem appealing, there may be an easier way.

Urea, applied dry, will change to ammonia as it reacts with the moisture in the hay. Apparently, this urease activity is fairly rapid. Converted to ammonia gas, the urea would have similar anti-mold preservative characteristics as the NH3 gas. It might be easier to handle, he says.

Beekeeping contest winners named

UNIVERSITY PARK – Dennis Fulmer, Marion Center, has been named state winner of the American Beekeeping Federation's Annual 4-H Essay Contest.

According to Henry T. Moon, 4-H specialist at Penn State, the winning entry will be entered in national competition with winners to be announced after June 1. Dennis will vie for a $250 cash award.

His essay, "Chemical Poisoning - A Threat to Honey Bees," deals with the misuse of toxic substances and their effects on bees and the honey they produce.

Second place winner in the contest was Andrew Paterson, Glen Mills. His topic was "Pesticides and the Honey Bee."

Other 4-H members participating in the essay program were Maria Cizek, Coudersport, Kevin Tasker, Saxonburg; Kim Sigmond, Evans City; and Jay Jelliff, Oceala and Caryn O'Brien of Cedars, Pa.

Contest judges were Dr. Clarence Collison and Mr. Richard Hackman of the Penn State Department of Entomology faculty.

Pa. chicken cook

(Continued from Page 108)

chicken with ease. Add broth and mixed vegetables. Cover and simmer 10 minutes. In bowl mix water and cornstarch, stirring to blend. Add cornstarch mixture to chicken and vegetable mixture; add sherry and sour cream and stir. In large, shallow baking pan place chicken mixture. Sprinkle cheese on chicken mixture. Drop cream puff topping by teaspoon in mounds on chicken mixture. Bake, uncovered, in 425°F. oven 20 minutes. Reduce heat to 350°F. Bake about 15 minutes longer or until puffs are done and brown. Makes four servings.

Cream Puff Topping: In saucepan mix together ½ cup water, ¼ cup butter and 1/8 teaspoon salt and bring to boil. Reduce heat and add ½ cup flour all at once. Beat until dough forms a ball and leaves sides of pan. Remove from heat and beat in two eggs, one at a time, until mixture is smooth and glossy.

The other seven recipes included:-

CHICKEN TIKKA

2 whole broiler-fryer chicken breasts, halved, skinned, surface slashed
2 cups plain yogurt
¼ cup lemon juice
4 tablespoons cooking oil
2 teaspoons salt
2 teaspoons ground coriander
½ teaspoon red pepper

In bowl mix together yogurt, lemon juice, oil, salt, coriander, and red pepper. Add chicken and marinate two hours. In large, shallow baking pan place chicken, skin side up, in single layer. Bake in 375°F. oven about one hour or until fork can be inserted in chicken with ease. Place eight inches from broiler unit and cook until very brown. Makes four servings.

Philadelphia, PA 19115

xxx

PAKISTANI CHICKEN

12 broiler-fryer chicken drumsticks, skinned
2 tablespoons cooking oil
2 tablespoons paprika
1 teaspoon salt
¼ teaspoon black pepper
1/8 teaspoon cayenne pepper
3 tomatoes, diced
¾ cup dried prunes
2 onions, sliced
2 cloves garlic, minced
1 cup yogurt

In fry pan place oil and heat to medium temperature. Add chicken and cook, turning, about 10 minutes or until brown on all sides. Add paprika, salt, black pepper, cayenne, tomatoes, and prunes. Cover and cook slowly about 30 minutes. Add onion and garlic; cover and cook about 30 minutes longer or until fork can be inserted in chicken with ease. Remove from heat. Add yogurt and mix well. Do not allow to boil. Makes four servings.

Sonja S. Lengel
9 De Cou Drive

xxx

CHICKEN GEORGE

2 pounds chicken wings, tips removed
1 teaspoon salt
½ teaspoon black pepper
½ teaspoon paprika
1 clove garlic, minced
1 cup flour
½ cup cooking oil
1 can (12 oz) cream of mushroom soup
½ cup water
½ cup minced onion
½ cup minced green peppers

Sprinkle salt, black pepper, paprika and garlic on chicken. In shallow dish place flour. Add chicken, one piece at a time, dredging to coat. In fry pan place oil and heat to medium temperature. Add chicken and cook, turning, about seven minutes or until brown on all sides. Drain off oil. Add soup, water, onions and green peppers. Cover and simmer about 40 minutes, stirring frequently, or until fork can be inserted in chicken with ease. Serve on bed of rice. Makes four servings.

GREAT CHICKEN BAR B Q

1 broiler-fryer chicken, cut in parts
½ cup diced celery
¼ cup brown sugar
½ cup water
¼ cup vinegar
½ cup catsup
½ cup chili sauce
2 tablespoons Worcestershire sauce
2 teaspoons salt

In large, shallow baking pan place chicken in single layer, skin side up. In bowl mix together celery, brown sugar, water, vinegar, catsup, chili sauce, Worcestershire sauce and salt. Pour over chicken. Cover and bake in 350°F. oven about two hours or until fork can be inserted in chicken with ease. Makes four servings.

Verona, PA 15147

xxx

FLEMISH CHICKEN

1 broiler-fryer chicken, cut in parts
3 tablespoons butter
1 large onion, diced
2 carrots, peeled, chopped
2 ribs celery, finely chopped
¼ teaspoon marjoram
1 teaspoon salt
½ teaspoon pepper
1 tablespoon brown sugar
3 slices bacon
12 ounces light beer
1 teaspoon cornstarch
Juice on ½ lemon
1 tablespoon cold water

In fry pan place butter and melt over medium heat. Add onion, carrots, celery, and marjoram. Saute about three minutes or until vegetables are well buttered. Add salt, pepper, brown sugar, and stir well. In large, shallow baking pan place chicken; pour mixture over chicken. Place slices of bacon on top of chicken. Cover and bake in 400°F. oven for 20 minutes. Add beer; cover and cook about 30 minutes longer or until fork can be inserted in chicken with ease. Remove chicken to serving platter. In bowl mix together cornstarch, lemon juice and water. Add to juice in baking pan stirring until slightly thickened. Pour sauce over chicken. Makes four servings.

Beryl Powell
955 Lakemont Drive

xxx

TASTY ROAST CHICKEN

1 whole broiler-fryer chicken
½ teaspoon garlic powder
⅓ cup teriyaki sauce

In large, shallow baking pan place chicken. Sprinkle garlic powder on chicken; pour teriyaki over. Let stand 15 minutes. Bake, basting frequently, uncovered, in 350°F. oven about 30 minutes. Turn chicken and continue baking, basting frequently, about 30 minutes longer or until fork can be inserted in chicken with ease. Makes four servings.

Family competes

Rhineers, rodeo, and riding go together

By KENDACE BORRY

WILLOW STREET - Near Willow Street, in Lancaster County, on just about any evening you can find them out behind the house, in the small arena, working their horses and practicing their sport. The entire family gets into the act and riding, roping, and barrel racing will be practiced as each concentrates on bettering his skill.

This is the Mike Rhineer family, with members Mike and his wife, Darlene, and children, Tammy, 16, and Mike, Jr., 15. Their sport is rodeo and love of the cowboy's sport is evident in their endeavors.

It probably all started when Mike, Sr., started rodeoing about 14 or so years ago. A local boy, he related that he had tried some other sports, but rodeoing appealed to him and he's been involved ever since. Then later the children came along.

"I thought maybe the kids would get involved in rodeo," Rhineer related. "But I didn't expect it to be this much at such a young age."

According to the Rhineers, Tammy and Mike, Jr., who were born exactly one year apart, became active with horses at an early age. They started with a small pony, and have been riding for nine years each. They were each 12 years of age when they competed in their first rodeo.

Why rodeo? "It just seemed interesting," Tammy stated, while Mike, Jr. nodded his head in agreement. "Horses are fun to be around, and we both really like riding, and we liked the idea of competing for money. But horses are also fun for trail riding and pleasure."

Barrel racing is the favorite event of Tammy, and this is her third year in the competition. Her horse is Traveler Ben, a five year old Reg. Quarterhorse gelding that she raised and trained herself.

She won her first championship barrel racing buckle in 1975, at age 14. The award was received for being the high money winner in the Eastern Shore Ropers Association. Series of Rodeo barrel racing. She repeated her winning of the award in 1976. In 1977, she also won a rodeo buckle for a barrel racing championship at the Hampton-Hanover Rodeo.

Calling herself an "outdoorsy" girl, the pert teenager told that money she wins is saved for future years. She hopes to train horses, especially barrel racers, and give riding lessons. She thinks of the possibilities of going to college, too.

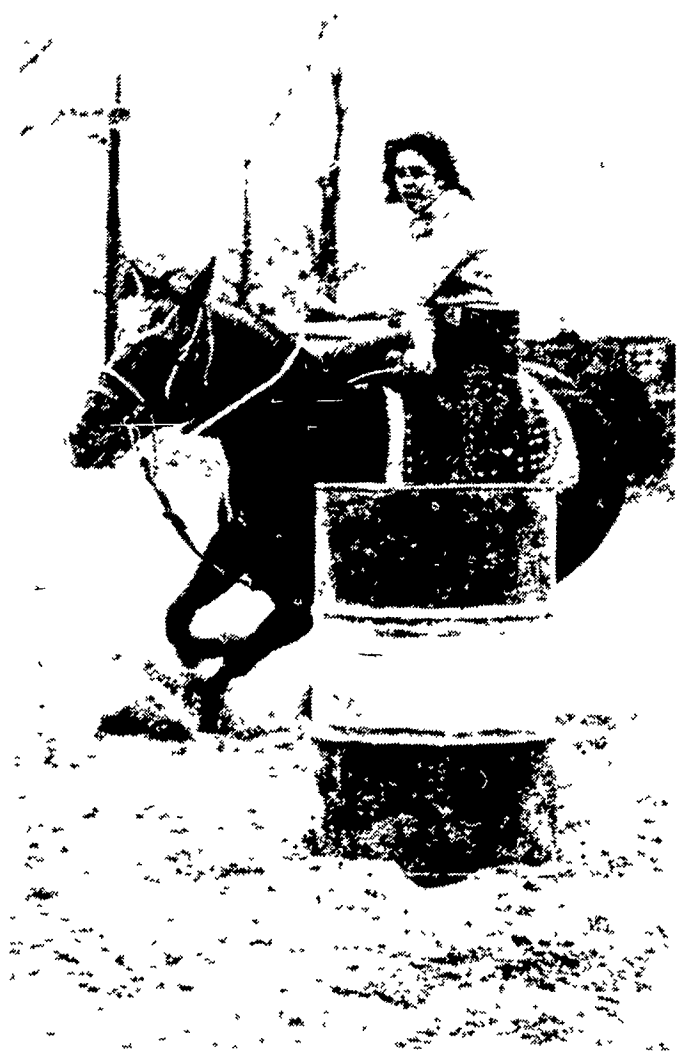
Both Tammy and Mike, Jr. take care of their own horses, feeding them, brushing them, cleaning the stalls, and caring for the saddles and equipment. Weather permitting, they work their animals about two hours each day.

Besides the barrel racing, Tammy also ropes, team-ropes, and goat ties.

One highlight of Mike, Jr.'s life so far has been the winning of four championship belt buckles in one year–1977. Each were won at individual rodeos.

He team ropes, does breakaway calf roping, barrel races, goat ties, calf ropes, and also does trick roping. Both he and his father entered the American Rodeo Association finals last year in the team roping and won the event.

The entire Rhineer family gathers down at the arena to work their horses. From left to right are Mike Rhineer and his wife Darlene on the horses, and Tammy and Mike Jr. in front.



Tammy Rhineer shows her winning form as she brings her horse around a barrel while practicing her racing skills.

Mike's horse is an 11 year old bay Reg. Quarterhorse. It was bought in Oklahoma and he has had it for five years.

This is the first year that Mike, Jr., has performed his trick roping in public–in fact his very first performance was given at the Keystone Rodeo held at The Buck a few weeks ago. But, according to his father, he has been working with ropes for a long time.

"He's been playing with ropes since he was about four years old," Rhineer explained. "But he really started working with tricks about three years ago."

Mike, Jr. explained. "One time at a rodeo I saw my dad's friend, Dick McCoy, goofing around, doing tricks with a rope. I asked him how he did it and he taught me. He has shown me how to do all the tricks I know."

So now, in addition to competing at the rodeos, Mike, Jr., is also performing. He will appear in his white slacks and colored shirts at 15 different rodeos this Summer, entertaining the crowds with his variety of rope tricks.

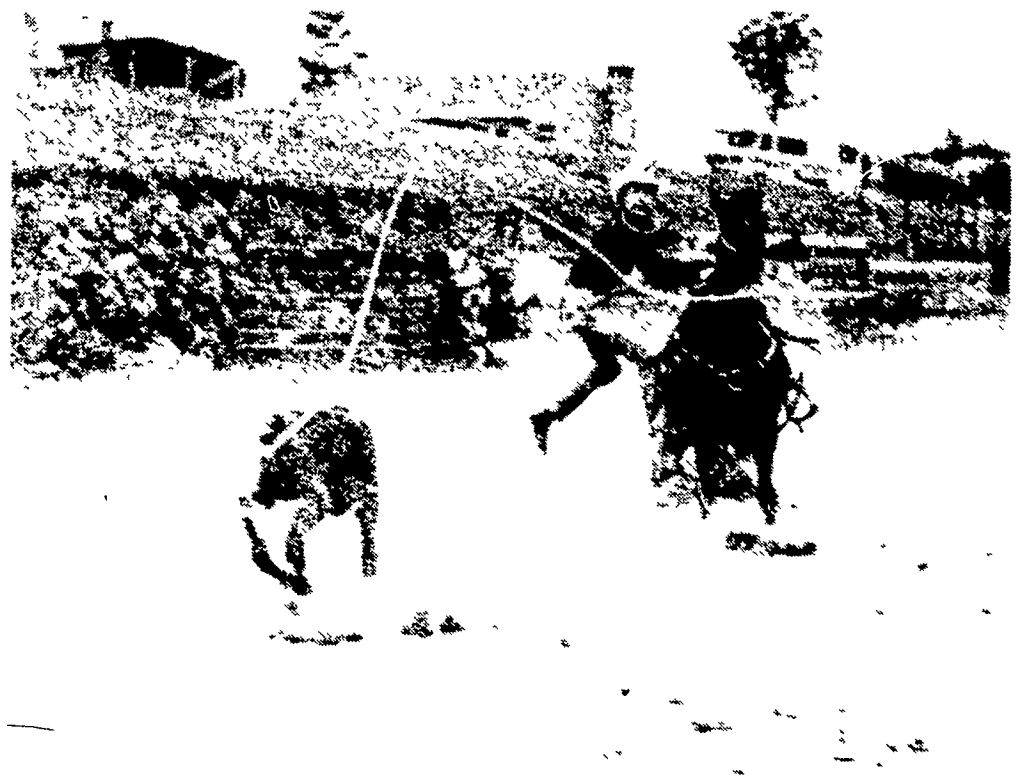
Mike's favorite event is team roping. This is his third year and he works with his dad and Dick McCoy, acting as the third partner.

"Rodeoing is different from other sports," Rhineer stated. "Everyone is on their own. There are no coaches, no teams, and the financing is your own. Winning is strictly on ability."

He went on to tell that he thinks the children have learned sportsmanship from rodeo and have made friends from all over the United States through their competing.

To help in improving their skills, motion picture films are taken of every event the family competes in. The handling of the camera is usually the job of Mrs. Rhineer. Then the film is soon developed and the family studies it to see where mistakes were made.

In the future, the family plans to continue their involvement with rodeo. Mike, Jr. wants to stick with his rodeoing and training and Tammy would like to have her own barrel racing school. At the present, her dad runs a once-a-year school on roping.



Calf roping is not something that is learned by just one practice. Here Mike, Jr. improves his techniques by roping at home in the arena.

Ag Safety Council out to lower accident rate

By JOANNE SPAHR

HARRISBURG – It's something every farmer knows about. It's a fear every farmer's wife lives with. And, yet, nobody thinks it will ever happen to them. But it does.

It's a proven statement that one out of every six farmers in Pennsylvania will have a serious farm accident, and that 87 per cent of all accidents happen to family members, not farm workers. And, unfortunately, over half of all accidents are severe. Surprisingly enough, farm people are most likely to be involved in an accident while doing routine chores.

Why does this happen?

"Farmers really know better than to be careless," says Elaine Benner, secretary for a newly formed statewide council whose primary goal is to change those statistics for the better. "They know they shouldn't stick their hands in a corn picker, but they just don't think for that minute."

Through education, the Pennsylvania Agricultural Safety Council hopes to get farmers to think for that "one disastrous moment" and in this way save lives and crippled limbs.

"We basically want to make farmers more safety conscious and safety aware," explains Mrs. Benner, "We'll have to constantly drill it in."

At this point Safety Council is a mere fledgling as far as statewide organizations are concerned.

It officially began in March of 1978 when the first annual meeting was held at Penn State University with the Honorable Kent D. Shelhamer, Pennsylvania secretary of agriculture, as guest speaker.

Prior to that conceptualizion had come about in November 1977 after Penn State University had hired their first safety specialist, Dennis Murphy. Murphy became aware of safety councils in other states, mostly in the mid-West and New York. After considering their value, Murphy met initially with John Frey, Sperry New Holland, and Marlin Miller, director of field services for PFA, to discuss the idea. After that these three invited other organizations to decide if such a council was of genuine concern. Upon a decision to the affirmative, by-laws were worked on and plans made for the first meeting. Today, the organization is comprised of 13 indivuduals and 12 organizations.

At this point, PASC is the only statewide organization for the farm safety practices, and according to J. Robert Peifer, president, the group has set out to be "problem solvers."

A list of projected activities includes publishing and distributing during Farm Safety Week a newspaper on current topics of farm safety. The group also plans to develop or buy posters on farm safety and mail them to schools.

To reach the general public, they have the goal of developing and distrubuting placemats, napkins, or special pamphlets to such establishments as restaurants.

Safety campaigns are also on the list of activities. These

Elaine Benner

campaigns will deal with particular subject areas such as harvesting, tillage and tractor overturn at specific times during the year. PASC will also sponsor an annual awards program recognizing individuals or groups that contribute to farm safety.

Three other planned activities include developing and distributing decals at certain times or for certain subjects; having campaigns to sell safety items such as smoke detectors, and fire extinguishers, and sponsoring events, activities, and displays at Farm Show and Ag Progress Days. They will also set up a portable display for county or local events.

President of the Council for the coming year will be J. Robert Peifer, executive vice-president, Pennsylvania Association of Mutual Insurance Companies. Dr. William Williams, assistant professor of agricultural education at Penn State, will serve as vice-president. John Frey, insurance manager, Sperry-New Holland Corporation, has been elected treasurer; and Elaine Benner, past chairperson, State Women's Committee, Pennsylvania Farmers Association, has been elected secretary.

The board of directors are: Robert H. Williams, editor, The Pennsylvania Farmer; Barry Wanbaugh, district sales manager, Agway, Inc.; Dr. Neil R. Buss, executive depty secretary, Pennsylvania Department of Agriculture; N. Gale Moore, secretary, Pennsylvania State Grange; Marion R. Deppen, assistant director, Cooperative Extension Service; and Dennis J. Murphy, safety specialist, Cooperative Extension Service.

An individual or family membership is available in PASC. Annual membership is $5 for an individual and $25 for an organization.

Interested individuals are urged to fill out the accompanying membership application and send it to the directed address.

Agriculture honor awards received

UNIVERSITY PARK – Gamma Sigma Delta, the honor society of agriculture, cited outstanding alumni, faculty, and students recently during the chapter's annual banquet at Penn State.

Honored for exceptional service in research with the College of Agriculture was Dr. Philip G. Keeney, professor of food science. Cited for outstanding work as a teacher was Dr. Paul R. Shellenberger, professor of dairy science. Honors for achievements in Extension programs went to Dr. W. Wayne Hinish, professor of agronomy extension.

Alumni honored for attainments, and taken into membership, were Wayne C. Handwerk of Camden, N.Y., manager of agricultural operations for the Campbell Soup Company; and Arthur Nesbitt of Fort Atkinson, Wis., president and chief exeuctive officer of Nasco International.

Eileen J. Burke, senior in animal science from Butler, received the undergraduate scholarship award of a watch. Cash scholarships of $50 each went to James L. Claghorn, State College, junior in animal science, and to Bruce R. Knoebel, Pittsburgh, junior in forest science.

Sophomore scholarship awards of pen and pencil sets were presented to James T. Elwell, Harwinton, Conn., major in animal science; and Lori F. Fehr, Pine Grove, and Judy A. Howe, Erie, both majoring in horticulture.

Elected officers for 1978-79 were: President, Dr. Milford R. Heddleson, Coordinator of Environmental Quality Affairs in the College of Agriculture; vice president, Dr. Milton C. Hallberg, professor of agricultural economics; secretary-treasurer, Dr. John H. Ziegler, professor of meat science; and historian, Dr. Douglas L. Garwood, associate professor of plant breeding.

During the banquet 38 graduate students and 55 undergraduates in Penn State's College of Agriculture were initiated into Gamma Sigma Delta. Admission to the honor society is based on high scholarship standards. Senior membership is limited to the upper 10 per cent of the class. Graduate students are admitted upon recommendation of the faculty.

Pulling contests return to Buck

THE BUCK – An action-packed evening gets underway here agin this evening at 7 p.m. when the Buck Tractor Pulls holds it third pull of the season. The track is located along Route 272, just north of The Buck, and 10 miles south of Lancaster.

Results of last week's pull are printed below:

12,000 pound super stock

1. Tom Middleton, Ridgely, Md., drove an IH 1066 to victory with a distance of 219 feet, 11 inches. 2. Charles Snyder, Andreas, Pa., Ford 9600, 195-2; 3. Tom Bedgar, Freeland, Md., IH 856, 155-9.

5000 pound modified

1. Curt Stoltz of Myerstown beat the field with his 427-Chevy-powered machine pulling strong for 244 feet and two inches. 2. Tom Almoney, Wrightsville, 429 Ford, 242-7; 3. Gary Mills, Fallston, MD., 427 Chevy, 231-5.

9000 pound open

1. David Becker of Mount Joy, driving a twin Ford-powered machine, came up with a full pull in the first round, and a charge of 277 feet, 5 inches in the pull-off to win the class. 2. Tom Middleton, full pull, 258-2; 3. Lester Houck, Kinzers, two 427 Chevys, 269-7.

5000 pound super stock

1. Dale Smoker, Cochranville, drove an Allis-Chalmers 180 to victory, going a distance of 245 feet, nine inches. 2. Jim Brubaker, Quarryville, AC 180, 234-10; 3. Tim Stauffer, Ephrata, Deutz 8006, 233-4.

9000 pound super stock

1. Tom Middleton beat the pack again, driving his IH 1066 for a near full pull at 296 feet, nine inches. 2. Charles Snyder, 281-3; 3. Tony Stauffer, New Holland, 267-7.

7000 pound modified

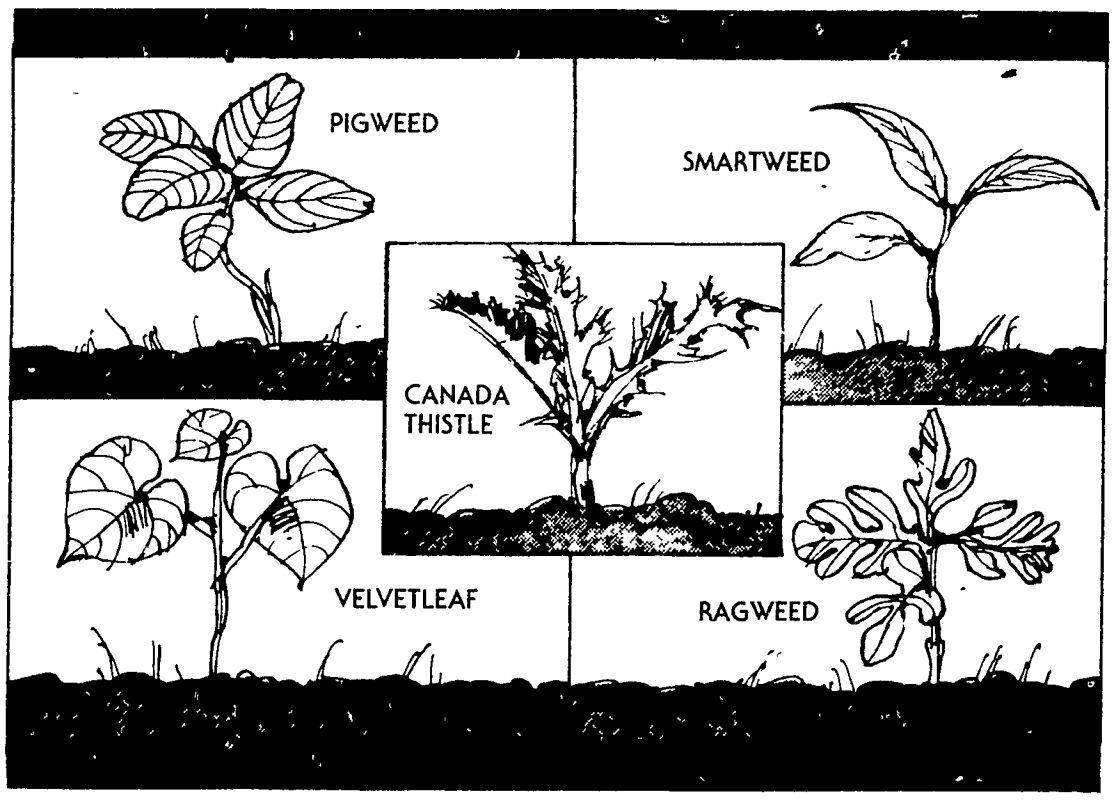
1. Dave Johnson, Deerfield, N.J., had a machine driven by three Ford engines and won first place with it. He travled 257 feet, 11 inches. 2. Les Houck, 247-8; 3. Donald Landis, Berlin, Pa., two 440 Dodge engines, 242-2.

7500 pound super stock

1. Tony Stauffer piloted his Deutz to victory with a full pull. 2. Tim Stauffer, 282-0; 3. James Ringler, Berlin, IH 560, 248-11.

For post-emergence weed control on corn...

Banvel® herbicide...



...alone or tank-mixed with 2,4-D (depending on your weed problem):

...to control tough, late-germinating broadleaf weeds,

USDA nitrite decision defined

WASHINGTON, D.C. – The U.S. Department of Agriculture recently acted to eliminate cancer-causing nitrosamines from fried bacon and to reduce the total level of nitrite in bacon.

Carol Tucker Foreman, assistant secretary of agriculture for food and consumers services, said, "Under the Meat Inspection Act we are required to prevent the sale of any product containing a substance that may be harmful to health. We have known for several years that there are cancer-causing nitrosamines in fried bacon. We are acting to eliminate them as quickly as possible.

"The public has a right to expect that federally inspected meat is wholesome. We want to assure that bacon can be eaten safely. Today's actions are another step toward that goal," she said.

Ms. Foreman announced two separate actions to reach these goals.

First, the Department issued a proposed regulation that will lower to 40 parts-per-million the level of sodium nitrite allowed to be used in curing bacon. The sodim nitrite (or an equivalent amount of potassium nitrite) would be used in combination with 0.26 per cent by weight of potassium sorbate. The proposed regulation is based on data which indicate that this formula provides an equal or superior protection against botulism than formulas presently in use, and eliminates confirmable levels of cancer-causing nitrosamines.

The proposed regulation would reduce by at least two-thirds the amount of nitrite presently used by most meat packers. The proposed rule will become effective within one year unless data are provided to USDA to demonstrate that these reduced levels would not prevent the formation of confirmable levels of nitrosamines and would not prevent botulinal hazards.

Second, the Department issued a final regulation, effective June 15, 1978, which requires bacon to be made using 120 ppm of sodium nitrite (or the equivalent amount of potassium nitrite) plus 550 ppm sodium ascorbate or sodium erythorbate. Cooked bacon, under this regulation, will be permitted to contain only the lowest level of nitrosamines confirmable under present commercial laboratory capabilities – 10 parts-per-billion.

Ms. Foreman said the actions announced were developed after analyzing a substantial volume of data on bacon and the effects of nitrite and nitrate in the formation of nitrosamines. This included the comments received on a proposal published in the November 11, 1975, Federal Register; the study undertaken by the Secretary's Expert Panel on Nitrites and Notrosamines, and the data submitted in March 1978 by the industry in specific response to USDA's request last October.

Over the past five years, the industry has made considerable progress in reducing the level of nitrosamines found in bacon, Ms. Foreman said. At the present time, however, there are not enough private laboratories' with the equipment and expertise to reliably test bacon for nitrosamines below the level of 10 ppb.

"The lowest level which can be reliably detected and confirmed is 5 ppb," Ms. Foreman said. "This, however, can be done only in a few government laboratories which have very sophisticated equipment. There are not enough government laboratories available to handle the volume of testing that would be required to test all bacon production down to the level of 5 ppb, however."

Additionally, Ms. Foreman said the data submitted by the industry demonstrated that it is possible to cure bacon using as little as 40 ppm of sodium nitrite, in combination with 0.26 per cent potassium sorbate without reducing botulinal proection and without confirmable levels of nitrosamines when bacon is fried. In this proposal, USDA is preliminarily accepting the validity of these data, but is asking all interested parties to submit data which might disprove their validity.

Interested persons will have until November 16, 1978, to submit these data, in duplicate, to the Hearing Clerk, Room 1077, South Building, U.S. Department of Agriculture, Washington, DC 20250.

With regard to the final regulation concerning nitrosamines, USDA's Food Safety and Quality Service will begin collecting samples from bacon processors for inplant testing. If more than 10 ppb nitrosamines are present, as confirmed by mass spectrometry (a system for measuring minute quantities of substances), all bacon in the plant – and all future production until adjustments are made – will be either retained or diverted to other products that are not cooked at temperatures at which nitrosamines are formed – such as pork-and-beans or bean-and-bacon soup.

In addition, the new regulation requires that within the year – as laboratory capabilities are developed – the permitted level of nitrosamines will be lowered to 5 ppb. Lots which exceed this level at that time will have to be destroyed.

Full texts of both documents will be published in companion notices in the May 16, 1978, Federal Register. Copies of these documents can be obtained by writing to FSQS Information, U.S. Department of Agriculture, Washington, DC 20250.

Craft festival set

BEL AIR, Md. – Steppingstone Museum, a Harford County institution dedicated to the country's past, will hold its eighth annual Old-Time Arts & Crafts Festival on June 1, 10 to 5 p.m., and on June 4, noon to 5 p.m.

Fifty artisans and craftsmen will demonstrate crafts of the eighteenth and nineteenth century such as spinning and weaving, basketmaking, rug hooking, broommaking, soap making, chair caning, horn braking, blacksmithing, painting artistry of all kinds, various types of needlework, quilting, and scores of other crafts to amaze and delight the twentieth century visitors.

Members of the Steppingstone Museum Association will guide visitors through the five buildings, arranged as a rural home and craftsmen's shops, which house 14,000 artifacts that comprise the fine collection of tools, home appliances, farm implements, dolls, toys and other items of the past century. Antique cars will also be on display.

Entertainment during Festival weekend will feature musical groups, square dancers and other events. Food will be available.

Steppingstone Museum, a non-profit organization, is located on a hillside at the corner of Rt. 136 and Macton Road, three miles north of Rt. 1, midway between Dublin and Whiteford, Md. It is also open on weekends, Saturday and Sunday, 1 to 5 p.m., from May to mid-October. Admission is Adulst, $1; Children, 25 cents.

Lincoln school reunion set

MOUNT JOY – All students and their families who ever attended Lincoln School are invited to attend a drop-in reunion on July 15 from 2 p.m. to sundown. The get-together will be held on the lawn of the school grounds by the Manheim/Mount Joy Road in Rapho Township.

Those attending are asked to bring a lunch, lawn chairs, and an old group photo. A cool drink will be provided.

In case of inclement weather, the reunion will meet in the Erisman Church basement located next door.

4-H steers branded for Farm Show competition

By JOANNE SPAHR

LANCASTER – Every year during Farm Show when the ring of junior beef projects encircles the large arena on Thursday morning, one question is inevitably asked by more than one bystander – "What are the marks on the hips of those steers?"

Those marks "FS", are the freeze brand which is required for any junior steer to participate in the state Farm Show event, and in the case of 4-H clubs, the brand is also necessary for members to participate in district beef shows held in November.

For several 4-H clubs in Lancaster Farming's coverage area, last weekend was the time to get down to freeze branding, since June 1 is this year's official deadline.

Lancaster, Lebanon, and Chester Counties each met separately at designated locations on Saturday to do their branding with Chester County's club putting through 28 steers, Lebanon's club, 19, and Lancaster, 86. Berks County's 4-H'ers, who did their branding two months ago, put their marks on 44 steers. Cumberland County, with 36 members, did their branding in February. April 1st was the set time for York Countians with 85 steers ending up with the FS marking.

Dauphin County's two 4-H beef clubs also branded in the past weeks, with the Lower Dauphin Beef Club having 18 members and the Upper Dauphin 4-H beef and Pig Club reporting 16 beef projects.

The Lancaster County group, the Red Rose Beef and Sheep Club, met at the Charles Myers Black and White Holstein Barn, Lancaster. Prior to the branding date, each member was asked to clip an eight inch block of hair from his or her steer's left hip about three to four inches back from and slightly above the hook bone or just back of the point of the left shoulder. This area was then treated with alcohol and the freeze brand applied.

Jason Weaver, Quarryville R2, a leader in the Red Rose 4-H Beef and Sheep Club, freeze brands a steer for district and Farm Show competition.

For black steers, the time involved was 60 seconds, for colored breeds, 70 to 90 and for white steers, 90 seconds. A combination of methyl alcohol and dry ice was used.

At the same time the branding was taking place, the animals were ear tagged with metal tags from the Bureau of Animal Industry of the State Department of Agriculture.

After the branding and tagging, the animals' starting weights were recorded. Lancaster's steers will be checked for their finishing weight in November. During the branding, Ralgro implants were available as were stomach worming pills.

Although every 4-H project is branded to go to Farm Show, each county is allowed to take only a certain amount of animals to participate in that show. The steers to fill this quota will be chosen in November at round-up, and the remainder will compete at the district show.

According to county agents, freeze branding has only been a requirement for approximately the past five years. The advantages to this type of branding over hot branding are that it is much simpler, less painful, and easier to do.

Avoid root crops in problem soils

UNIVERSTIY PARK – If your garden soil is the heavy clay type that hardens when it dries out or if your planting area is full of stones, you'd do better to grow tomatoes, beans or cucumbers than root vegetables such as carrots, parsnips or beets, say Penn State specialists. Although root vegetables are flavorful and packed with vitamins and minerals they often form forked roots and are badly malformed when grown in problem soils. Compact soils can be overcome by adding organic matter for a period of years. However, raw organic matter such as leafmold, straw or wood shavings should be allowed to decay first before the material is added to the soil, says McKeehen.

Here's another thing to keep in mind. While most vegetable crops thrive in soil containing animal manures, this is not true for root crops. When carrots and other root crops are grown in soil with fresh manure or other organic material they form a mass of feeder roots which gives an unsightly appearance of whiskers.

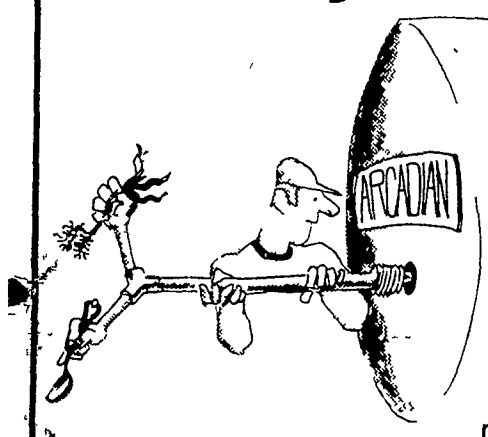
Our 2-in-1 soybean program can make you a champion.



We can do exactly what another ARCADIAN® dealer did for one state soybean champion He combined his herbicide in a 7-21-21 liquid made the SLF® way with POLY-N® and did two jobs in a single feed & weed application at 250 lbs per acre His winning yield was 67 9 bushels
It's true, soybeans are good scavengers of leftover fertilizer But if previous applications have been reduced in recent years, there's probably not much residual fertilizer left to scavenge
This is why we're recommending a feed & weed program for soybeans It can supply the exact ratios of N-P-K and micronutrients your soils need to fully feed your beans And it provides a convenient carrier for preplant herbicides, taking care of two jobs, accurately, uniformly, in just one quick trip
We're convinced our feed & weed program can do for soybeans what it does for corn We'd like you to try it We'd like you to grow your best bean crop ever We've got the program to do it

It's Expo time

(Continued from Page 122)

club. The strawbales will be arranged in a series of steps and each step will tell a project's name and give an example of a finished project done by a 4-H'er. Such items as hand-sewn garments, photobooks, cooking utensils, growing vegetables, and live pets will all be on hand to help tell the 4-H story. Also 4-H members will be manning the booth evenings and over the weekend to talk to anyone interested in joining the club.

The Swift Stitchers from the Lititz-Manheim area designed and built a six foot dollhouse for their exhibit. Four stories high, it was designed that the girls can use the different rooms to tell another aspect of the 4-H story. In one room, a person can spot a 4-H'er getting ready for dress revue, in another room a youth is practicing her cooking skills, and upstairs one is catching up on her beauty sleep so she will keep her good health.

The group has been working on the exhibit since the second week on April, according to leader Mrs. Paul Stauffer. Her Husband was in charge of building the pine structure and girls from the club have finished the house with such items as wall-to-wall carpeting, windows with drapes, scale model furniture, and dolls which live in the house. The project doll house will be used for other exhibits and parades after the Expo.

Terrariums will be displayed by the Elm-Penryn Community Club whose display will show step-by-step directions how to make the small glassed-in gardens. The display will take the form of a stairway with three different forms of terrariums on view. Also, according to leader Mrs. Dorothy Myers, there will be demonstrations by 4-H members of the terrarium craft.

The Boots and Saddles 4-H related that they are making collages of all the pleasure uses of horses. Their theme is "This is the year of the horse", and their work will be displayed on a split rail fence.

These and other exhibits will be set up in the Watt and Shand wing of the Mall and open to the public the hours that the mall is open. Everyone is invited to come and view the efforts of the 4-H'ers to show what 4-H is doing.

Also, as part of the Expo festivities, the Lancaster 4-H County Council will hold a car wash on June 3 at the Lancaster Farm and Home Center. Cars will be washed from 10 a.m. till 4 p.m.

Pa. chicken cook

(Continued from Page 124)

BIRD OF PARADISE

1 broiler-fryer chicken, cut in parts
⅔ cup orange juice
⅓ cup soy sauce

In large shallow baking pan place chicken, skin side up, in single layer. In bowl mix orange juice and soy sauce. Pour over chicken. Bake, uncovered, in 325°F. oven, basting and turning every 15 minutes about 1½ hours or until fork can be inserted in chicken with ease. Remove chicken from basting sauce to serve. Makes four servings.

Mr. Richard Ziemer
1028 Brookfield Circle
Quakertown, PA 18951

xxx

STEAMED CHICKEN

1 whole broiler-fryer chicken
2 tablespoons salt
2 tablespoons ginger powder
2 tablespoons dry sherry

In bowl mix salt and ginger. Rub on chicken. Let stand in refrigerator 30 minutes. Brush off excess salt and ginger. Place chicken in bowl. Arrange bowl on rack in container in which water is placed below rack. Cover whole container and steam 30 minutes. Remove chicken; cut with cleaver into smaller pieces. Reserve two tablespoons broth from bowl in which chicken was steamed. Add sherry to reserved broth. Place chicken on serving platter. Sprinkle sherry mixture over chicken. Makes four servings.

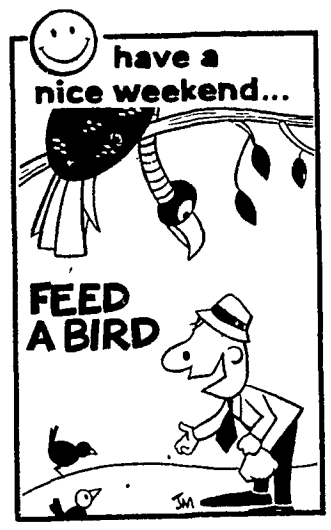
Pond leaks sealed with bentonite

NORRISTOWN – Building a pond is easier if leaks are stopped before it begins to fill, according to experts.



Bentonite is a special type of clay used to seal canals, irrigation ditches, and farm ponds to prevent water loss through seepage. It is a fine granular material which absorbs water and swells 10 to 15 times its original volume. When bentonite is mixed with water and soil, it forms a jelly-like mass that prevents water from seeping through the mixture.

There are several ways to use bentonite for sealing farm ponds, but perhaps the most effective is the dry-placement method.

One should drain the pond, remove all surface rocks and vegetable growth, then plow or disk the leaking area. Then a person spreads the bentonite evenly at the rate of one pound per square foot and mixes it with the top four inches of dry soil either by hand-raking or harrowing or disking. If equipment is available, roll and pack the treated area and let the pond refill.

Bentonite can be used effectively on most any type of porous soil. But all large cracks and sink holes should be filled with a mixture of bentonite and soil before starting area treatment.

Bentonite is fairly expensive; and for best results, it should be used according to instructions.

Retail beef prices show upswing

DENVER, Colo. – Retail beef prices, which have been increasing steadily over the past months, showed a further increase during April and May, the National Cattlemen's Association reports.

The latest increase puts the NCA survey average above the previous high in mid-1975, according to Richard A. McDougal, NCA president. However, beef prices still were lagging behind increases in the Consumer Price Index and consumer incomes since 1975.

The association's monthly 19-city survey of supermarkets showed the national average price of five beef cuts on May 11 was $1.89 per pound, compared with $1.78 a month earlier and $1.78 in July, 1975.

McDougal emphasized that the NCA five-cut average does not represent the average price of all beef. Because of the inclusion of three types of steak in the limited five-cut survey, the NCA average runs higher than government report averages for all cuts. For example, the latest U.S. Department of Agriculture average for all Choice beef was $1.65 per pound. The NCA survey is conducted to show current supply and price trends rather than to indicate the average of all beef prices.

The latest beef price increase reflects the current downtrend in beef production, McDougal noted. However, he said, high cattle prices are now stimulating cattlemen to rebuild herds, which eventually will bring a supply increase again.

"For the past three years," he said, "large beef production and low cattle prices, along with escalating costs, brought financial losses to cattlemen which forced a sell-off of basic herds. During that time, beef prices were decreasing or only holding steady, and consumers enjoyed low prices. Now, per capita supplies are moving back to lower, more normal levels, and beef prices are beginning to catch up with the prices of other products.

"The recent price increases are not a cause of the continuing basic inflation problem. They represent only a response to a cyclical supply change typical of an agricultural commodity business, plus a catching up with inflation. Actually, the May NCA price average is up only 6 per cent from the previous high in 1975, while the over-all Consumer Price Index has increased 18 per cent and average consumer disposable income has increased 27 per cent since 1975."

NCA's five-cut average increased in 18 cities and decreased in one during the past month. The average prices of all five cuts – ground beef, round steak, sirloin steak, T-bone steak and chuck roast – showed increases.

Average retail beef prices vary among cities because of such factors as local wage rates, transportation costs and the amount of "specialing" be retailers at the time of the survey.

McDougal explained tha the NCA survey was initiated by cattlemen in 1974 in an effort to provide a more up-to-date indication of price trends. The government's CPI reflects beef prices which are about seven weeks old by the time they are reported.

"Let us never forget that the cultivation of the earth is the most important labor of man.

The newly elected officers of the Garden Spot FFA chapter are: (left to right, front row) Darell Dombach, secretary; Donald Metz, sentinel; Jerry Myer, president; Jeff Keemer, chaplain; James Meck, reporter; and Gerald Garber, treasurer. Back row, left to right, consists of Donald Brubaker, vice president; and Clayton Shenk, student advisor.

L-S FFA elects officers

LAMPETER – Jerry Myer, a junior at Lampeter-Strasburg High School, has been elected president of the Garden Spot Future Farmers of America Chapter. Myer, who is the son of Mr. and Mrs. Herbert Myer, Village Road, Lampeter, will begin his term in June of this year and will step down in May of 1979.

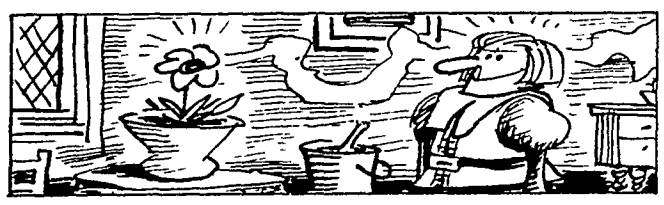
Myer and seven other officers were selected at the May 4 meeting of the local chapter.

Holding down the office of vice president will be Don Brubaker, the son of Mr. and Mrs. Harold L. Brubaker, Strasburg R1. Brubaker is also a junior at L-S.

Gerald Garber, the son of Mr. and Mrs. Kenneth B. Garber, Willow Street R2, will serve as treasurer; Darell Dombach, son of Mr. and Mrs. Robert S. Dombach, Orchard Road, Willow Street, secretary; Don Metz, son of Mr. and Mrs. R. Lee Metz, Mentzer Road, Lampeter, sentinel; Jeff Keemer, son of Mr. and Mrs. Joseph F. Keemer, Jr., of Villiage Road, Lampeter, chaplain; Clayton Shenk, son of Mr. and Mrs. Harold L. Shenk, Willow Street Pike, Willow Street, student advisor; and James Meck, son of Mr. and Mrs. P. Melvin Meck, Cedar Drive, Willow Street, reporter.

Shenk is a senior, while Garber, Dombach, Metz, Keener, and Meck are sophomores.

This year's graduating senior officers are: Charles Groff, president; Joe Witmer, vice president; Art Mellinger, secretary; John Frey, advisor; Dale Metz, sentinel; and Steve Helm, reporter.



The odor of lavender was once believed conducive to long life.

Milk records on Dam's side of these heifers will be cataloged at ring side.

One Registered Holstein bull, Sire-Harrisburg Gay Ideal, Dam's records 4 yr. 296 dys, 17,300M, 3.8T, 652 F, 5-1, 338 dys, 17,439M, 645F. Mother classified G+82.

Selling one Registered G+81 Holstein Cow born 4/14/72 sired by Caernarvon Roman. She was bred 10/24/77 to Diamond S. Pietye Standout. Her records are 4-4, 266, 13,365, 519, 3.9. Proj. 305 dys. 14,301, 561F, 3.9 Test.

Second Herd. Crystal Spring Farm Complete Herd Dispersal. There are 33 cows, 6 bred heifers and 2 open. All heifers are vacc. This is a real good herd of young cows, that were on D.H.I.A. for just 9 mo. There are quite a few of these cows proj. for high milk production as 2 yr. olds. 1 cow is milking 61.8 lbs. for the tester and proj. 18,846 M. Due Aug. 21. 2 yr. old proj. 15,444 M., due Aug. 21. 2 yr. old proj. 16,436 M., due Aug. 27. 2 yr. old proj. 15,229 M., due Sept. 30. 1 cow milking 85 lbs. per day proj. 19,169 M., due Jan. 15. 2 yr. old proj. 16,404 M., due Dec. 7. 4 yr. old milking 61 lbs. per day, proj. 15,768 M., due Nov. 28. 2 yr old proj. 14,780, due Aug. 1. 2 yr. old proj. 14,272, due to July 8. There are 14 cows due May to Aug. 8 due Sept., Oct., Nov. There are 5 young Registered Cows in this herd. Sire-Collins Crest Buddy Burke, born Nov. 7, 1974; Thronstead Bright Lightning, born July 20. 1974; Thronstead Bright Lightning born July 4, 1974; Poverty Hollow Independence born Dec. 6, 1975; and Hilltopper Reflection Escort born Jan. 22, 1974.

Between the two herds there are 25 cows due from May to Nov. All check for pregnancy. If you want to up your D.H.I.A. records these are the cows to buy. There are 36 heifers in the two herds. We have had good cows in our past sales and we have better cows for this sale. These cows are getting harder to find so get your good cows now. This is a rare opportunity to get milk, bloodlines, and foundation cows. These cows have the potential for high classification. We do not misrepresent any cows in these dairies. We do not advertise top cows when we don't have them. We sold some top dairies in past sales, but these will top them all.

Kendy's Kollumn

by Kendace Borry

Mowing lawn, in my mind, ranks right up there at the top of the untouchables beside washing dishes and ironing clothes. But every Spring this funny green stuff grows in our oversized yard, and my Mom keeps threatening to disown us if she can't find the house in the weeds.

So, we mow the lawn. This year, though, a new mower was bought, so instead of arguing over who mows the lawn, the fight is over who uses which lawn mower.

I seem to have inherited the job of mowing the area around the pond. To mow around the pond or not to mow around the pond has been a debate that has been continuing as long as we have lived on the farm.

When my father was alive, he thought he found the ideal solution to the pond dilemna. He put up a fence and turned some happy sheep loose in the area to eat the lush grass to their hearts' content. But Mother objected to the fertilizer the sheep left there and since our picnic area was near the pond, and lots of our friends didn't understand life on the farm, the fence came down, and the sheep moved back to the pasture.

Then a tractor mower was bought. This made most mowing much easier but unfortunately the bank of the pond has a suicide slope on one side that only the bravest idiots attempt. I used to do it in high school and tried to show my sister once how you put the tractor in gear, let the clutch fly, and mow down the hill at 90 miles an hour, swerving in the middle for the trees in the way. She retired to the house with a headache and has never been seen in the pond area again.

So I'm still mowing the pond with occasional help from my brother. But now this year we have the self-propelled push mower to play with.

My biggest worry is that the machine seems to have a mind of its own. It goes at its own rate of speed and can't seem to read my mind when to stop. I keep seeing this vision of it disappearing over the pond bank into the water to slowly sink out of sight

Maybe then Mother would let the sheep back out.

Cooperative business declines

WASHINGTON, D.C. – USDA reports business volume done by farmer cooperatives in fiscal year 1976 dropped for first time in 20 years. Dollar volume was $40.1 billion - down three per cent from the year before. USDA says the drop was due mainly to lower prices cooperatives received for farm products. Memberships dropped from 6.1 million to 5.9 million. Number of cooperatives dropped from 7,645 to 7,535.

MACHINERY CONSIGNMENT AUCTION

Berks County farmers

(Continued from Page 107)

the ground will be more even because the cultivator won't leave a ridge.

They have been planting corn with a six row plateless planter since they started minimum tillage in 1973. Before 1973 the Hix's moldboarded all of their corn fields and used a four row planter with wide rows.

They strive for plant populations of between 20 to 21,000 plants per acre except for their silage corn. Here they plant 24,000 seeds per acre to hopefully achieve a plant population of 22,000.

Lesher explained that approximately half of the 425 acres of corn they produce is no-tilled while the remainder is chiseled. No-till planting has saved them time, but not too much in production costs. This was primarily attributed to the heavier use of herbicides. The Leshers have not increased the amount of spray on their minimum tilled ground however, noting no significant difference from conventionally plowed soil.

When planting no-till, Lesher increases his seeding rate to about 23,000 seeds per acre and has found that last year the no-tilled corn yielded better than the rest of his corn.

Gelsinger explained that they try to plant 20,500 seeds per acre to achieve a plant population of 18,500 to 19,000.

They have also switched from a four row planter to a 30 inch no-till six row planter. They follow the chisel plow with a field cultivator before planting. Gelsinger remarked that they have gone to larger equipment, using a four-wheel drive tractor for the first time this year.

All of the interviewed farmers have used insecticides during the past few years. "Ten years ago, I didn't use them" stated Kopfer. John Hix remarked that he believes that the corn comes up quicker when insecticides are applied.

Gelsinger has used insecticides for the past three years but planted without them this year because of the economics and availability," he explained. "Instead I'm putting the money towards more fertilizer," he said.

Gelsinger incorporates liquid nitrogen as close to planting time as possible to reduce the loss, followed by about 250 pounds of row fertilizer when planting.

John Hix stated that he thinks incorporation of herbicides has been "the best thing ever." John had entered corn production contests last year using his ordinary planting procedures and was first in Berks County and second in the state in the five acre contest.

In the 25 acre contest he was placed third nationally in the class A non-irrigated division. The corn was planted in a four year old alfalfa field.

Leshers plow down fertilizer which is custom applicated in the Spring and followed up with 150 pounds of row fertilizer. Pre-emergance spray is used on all their corn except that which was no-tilled.

Kopfer explained that he takes complete soil tests every year for every field and applies the individual ingredients to each field's needs, instead of using a premixed blend. But regardless, 130 units of nitrogen are plowed down in each field. For row fertilizer Kopfer has switched from a blend of 8-32-16 to a blend of 13-52-0, to better accomodate his practices.

"I change my herbicide program a little each year," Kopfer mentioned. He goes heavier on the herbicides because of the extra mulch on the surface. Gelsinger also noted that he applies herbicides on the heavy limits which are recommended.

Larger equipment has taken the place of smaller machines in most instances. Larger tractors are especially needed for pulling chisel plows and off-set discs. Kopfer has gone from an 80 horse power tractor to 105 horsepower model equipped with dual wheels. Duals have become very important in reducing slippage and vibration.

Rae Hix is sold on tractor cabs, because they make field work more tolerable. This year his sons didn't want to start planting corn as early as Rae would have liked because it was too cold. "But," said Hix, "next year we may have a cab on the planting tractor so they will plant anyway."

AUCTION SALE

Fitting and showing champs named for 53rd annual dairy exposition

UNIVERSITY PARK — Champions were announced recently in fitting and showing contests of the 53rd Annual Dairy Exposition at Penn State University. The all-around champion was Dave Castrogiovanni of Montrose. Reserve all-around champion was Donna Gerst of Pittsburg.

Grand champion showman was Dave Castrogiovanni of Montrose while the reserve grand champion showman was Irvin Zook of Mifflintown. The grand champion fitter was Dave Castrogiovanni and the reserve grand champion fitter was Linda Stern of Scranton.

Champion amateur showman was Mike Crawford of Brookville while the reserve champion amateur showman was Julianne Turko of Carnegie. The champion amateur fitter was Carla Chieffo of South Oakdale and the reserve champion amateur fitter was Julianne Turko.

Named the most helpful individual during the Exposition's "Show Day" was Terry Snoddy of Allenwood, while Jennifer Dill of Wallingford was named the hardest working individual.

The following were winners in indivual breeds:

The Jersey champion showman and fitter was Lori Sollenberger of Everett. Reserve champion Jersey showman was Kate Lordan of Philadelphia while the reserve champion Jersey fitter was Carla Chieffo of South Oakdale.

Brown Swiss champion showman and reserve champion fitter was Debbie Gray of Downingtown. The champion Brown Swiss fitter and reserve champion Brown Swiss showman was Lisa Antinoph of Shelter Island, N.Y.

Guernsey champion showman and reserve champion Guernsey fitter was Julianne Turko of Carnegie. The champion Guernsey fitter and reserve champion Guernsey showman was Debbie Reinsel of Mayport.

Ayrshire champion showman and reserve champion Ayrshire fitter was Karen Steele of Mechanicsburg. The champion Ayrshire fitter and reserve champion Ayrshire showman was Linda Stern of Scranton.

Holstein champion fitter and champion Holstein showman was Dave Castrogiovanni of Montrose. The reserve champion Holstein showman was Irvin Zook of Mifflintown and the reserve champion Holstein fitter was Donna Gerst of Pittsburgh.

Price support deadline set for May 31

WASHINGTON — The Agricultural Stabilization and Conservation (ASC) Committee, reminds farmers that May 31 is the last day to apply for price support loans on 1977-crop corn and sorghum. Farmers still have a little time left to apply for a loan and become eligible to participate in the grain reserve program. May 31 is also the final date to obtain a loan on 1977-crop wheat, barley, and oats to be placed in the reserve.

On May 1 farmers were allowed to place 1977 corn and sorghum in the grain reserve before the loans on these crops matured.

The farmer-held reserve and the set-aside programs are designed to increase the prices farmers receive for their grain. The grain reserve takes grain off the market for a period of up to three years, or until market prices reach stated levels.

Nationally, 374.3 million bushels of wheat and 55.5 million bushels of feed grain had entered the grain reserve as of May 2, and 66,490 farms were enrolled in the set-aside program as of April 27.

Farmers who wish to participate in the CCC loan program, grain reserve and/or the set-aside program should contact the local ASCS office.

Hjort says beef prices are above criticism

WASHINGTON, D.C. – Howard Hjort, director of economics, policy analysis and budget for the U.S. Department of Agriculture has come to the defense of cattle producers as beef prices to consumers begin to rise. Speaking in Montana, Hjort said, "Livestock producers and other farmers should not be criticized for the higher prices that they're now receiving.

"People quickly forget that for the past three years meat at the grocery story has been a bargain at the expense of the U.S. livestock producer," he said. "The cow/calf operator and the commercial feeder in the Great Plains both have lost from $5.00 to $10.00 per hundredweight since 1975," Hjort declared, pointing out that farmers have been forced to cut their inventory because prices have been below the cost of production.

"The prices that farmers are now getting are essential to cover rising feed costs, the losses incurred in the last three years and herd replacement," Hjort said. "Prices will likely have to continue to rise to reverse the liquidation cycle."

Although food costs will average six to eight per cent higher in 1978, Hjort said 10 per cent of that increase will be the result of imported foods – sugar and coffee – and fish. About half of the increase will be the result of increased farm value of food and about 40 per cent will be caused by increased marketing costs – wages and executive salaries, packaging and transportation.

"I think everyone should recognize that increased prices to livestock producers make only a small contribution to rising retail food costs. The food industry is highly complex, and within that industry, livestock producers have been the real losers for the past three years," Hjort concluded.

Tractor pull today

KINZER – The Rough and Tumble Historical Association in Kinzer, Pa., will sponsor a Four Wheel Drive Pull today, May 27 at 6 p.m. The contest is in Kinzer, which is located 15 miles east of Lancaster on Route 30.

A food stand will be sponsored by the Kinzer Fire Company.

4-H club meets

ALBURTIS – The Eastern Berks 4-H Dairy Club met recently at the home of Wendy and Steve Shaw. During the meeting, teen leaders organized their groups for the 4-H year.

The next meeting of the group will be held on June 9 at the home of Sandy Moser. Topic for the evening will be breaking heifers to lead.

Berks County DHIA Monthly Report

APRIL 1978

"Amy," a 10½ year old Holstein in the Reu Hel Farms herd, topped the milk production list for lactations completed last month. Her poundage of 26,375 for milk edged the second place cow, "Sparkie," another 10½ year old Holstein. She produced 26,116 pounds of milk for her owner, Ray E. Bicksler. Their respective tallies for butterfat are 752 and 845. The butterfat champion, with 918 pounds, is "Passion," owned by Junge Farms. She had 23,878 pounds of milk to go along with all that butterfat.

4-H chicken project about to start

NORRISTOWN – This Summer a 4-H broiler/roaster project will be open to boys and girls ages 8 through 19 at Heckler Plains, a restored historical farm in the Harleysville area of Montgomery County. Dave Morrison, a local attorney and 4-H poultry leader from the county will be leading the project.

The birds will be housed at Heckler Plains and participants will be assigned certain days to be responsible for feeding and watering on these designated days.

The broiler project will meet Saturday mornings, starting June 3 with broiler chicks and will end July 30 with dressing the birds. Participants will measure feed consumption and calculate the cost and rate of converting feed to meat. Bird handling, genetics, nutrition, disease control and economics will be covered at weekly meetings. Visits to a poultry farm and hatchery are also planned. At the end of the project each participant will dress two birds to take home.

In July, there will be an all day workshop where youngsters will learn how to grade eggs, judge live and dressed birds plus determine how good a layer a hen is by analyzing the bird. This will be conducted by a Penn State University Extension Service poultry specialist.

The roaster/capon project will last until Labor Day weekend. Participants will receive instruction in the caponizing of cockerels.

The business management aspects of poultry farming (egg and broiler production) will be stressed for high school age participants.

Ten Dollars ($10.00) per participant will cover costs toward brooder equipment, coop construction materials, and feed. The project is limited to 25 participants.

There will also be an opportunity for scouts to obtain a merit badge in a related but more intensive project.

Anyone interested should contact Dave Morrison at his office, 215-539-4530, 2300 Girard Plaza, Philadelphia, Pa. 19102.
